Updated CompTIA Exam Questions Vce – High Pass Rate Authorized CAS-004 Pdf

The whole payment process on our CAS-004 exam braindumps only lasts a few seconds as long as there has money in your credit

card. Then our system will soon deal with your orders according to the sequence of payment. Usually, you will receive the CAS-004 Study Materials no more than five minutes. Then you can begin your new learning journey of our CAS-004 preparation questions. All in all, our payment system and delivery system are highly efficient.

CompTIA CAS-004 or the CompTIA Advanced Security Practitioner (CASP+) certification is a globally recognized certification program designed to validate advanced-level security skills and knowledge. The CASP+ certification is ideal for cybersecurity professionals who want to demonstrate their expertise in enterprise security, risk management, and the integration of computing, communications, and business disciplines.

CompTIA Advanced Security Practitioner (CASP+) Exam Sample Questions (Q90-Q95):

NEW QUESTION # 90

A software company wants to build a platform by integrating with another company's established product. Which of the following provisions would be MOST important to include when drafting an agreement between the two companies?

- A. Shared responsibility
- B. Data sovereignty
- C. Safe harbor considerations
- D. Source code escrow

Answer: A

Explanation:

When drafting an agreement between two companies, it is important to clearly define the responsibilities of each party. This is particularly relevant when a software company is looking to integrate with an established product. A shared responsibility agreement ensures that both parties understand their respective responsibilities and are able to work together efficiently and effectively. For example, the software company might be responsible for integrating the product and ensuring it meets user needs, while the established product provider might be responsible for providing ongoing support and maintenance. By outlining these responsibilities in the agreement, both parties can ensure that the platform is built and maintained successfully. NEW QUESTION # 91

A security engineer has been asked to close all non-secure connections from the corporate network. The engineer is attempting to understand why the corporate UTM will not allow users to download email via IMAPS. The engineer formulates a theory and begins testing by creating the firewall ID 58, and users are able to download emails correctly by using IMAP instead. The network comprises three VLANs:

□ The security engineer looks at the UTM firewall rules and finds the following:

□ Which of the following should the security engineer do to ensure IMAPS functions properly on the corporate user network?

- A. Create an IMAPS firewall rule to ensure email is allowed.
- B. Contact the email service provider and ask if the company IP is blocked.
- C. Make sure the UTM certificate is imported on the corporate computers.
- D. Confirm the email server certificate is installed on the corporate computers.

Answer: D

Explanation:

To ensure that IMAPS functions properly on the corporate user network, the security engineer should take the following steps: Confirm that the email server certificate is installed on the corporate computers. In order to establish a secure connection using IMAPS, the client computer must trust the certificate of the server that it is connecting to. If the email server certificate is not installed on the corporate computers, users will not be able to establish a secure connection using IMAPS.

NEW QUESTION # 92

A company has integrated source code from a subcontractor into its security product. The subcontractor is located in an adversarial country and has informed the company of a requirement to escrow the source code with the subcontractor's government. Which of the following is a potential security risk arising from this situation?

- A. Publication of the source code on the internet
- B. Legal action to force disclosure of the source code
- C. Sale of source code to competitors during a buyout
- **D. Development of zero-day exploits based on the source code**

Answer: D

Explanation:

Step by Step Explanation:

* Development of zero-day exploits is a critical risk, as adversarial entities with access to the source code could analyze it for vulnerabilities to exploit.

* Legal action or sale of the source code are concerns, but they are not unique to the adversarial context of this scenario.

* Publication of the source code on the internet is less likely than targeted exploitation in this specific scenario.

Reference: CASP+ Exam Objectives 3.2 - Analyze risk scenarios to identify potential exploitation.

NEW QUESTION # 93

A small company needs to reduce its operating costs. vendors have proposed solutions, which all focus on management of the company's website and services. The Chief information Security Officer (CISO) insist all available resources in the proposal must be dedicated, but managing a private cloud is not an option. Which of the following is the BEST solution for this company?

- A. Multitenancy SaaS
- B. Community cloud service model
- C. On-premises cloud service model
- **D. Single-tenancy SaaS**

Answer: D

Explanation:

Explanation

A single-tenancy SaaS solution is the best solution for this company. SaaS stands for software as a service, which is a cloud-based model that allows customers to access applications hosted by a provider over the internet. A single-tenancy SaaS solution means that the company has its own dedicated instance of the application and its underlying infrastructure, which offers more control, customization, and security than a multi-tenancy SaaS solution where multiple customers share the same resources. A single-tenancy SaaS solution also eliminates the need for managing a private cloud or an on-premises infrastructure. Verified References:

NEW QUESTION # 94

A penetration tester inputs the following command:

This command will allow the penetration tester to establish a:

- A. network pivot
- B. proxy chain
- C. port mirror
- **D. reverse shell**

Answer: D

Explanation:

The command depicted is indicative of a reverse shell, which is a type of shell where the target system initiates an outgoing connection to a remote host, and then standard input and output of the command line interface on the target system is redirected through this connection to the remote host. This is typically used by an attacker after exploitation to open a remote command line interface to control the compromised machine.
