## 156-836 Exam questions, 156-836 Braindumps, 156-836 Real Exams

Our 156-836 cram materials take the clients' needs to pass the test smoothly into full consideration. The questions and answers boost high hit rate and the odds that they may appear in the real exam are high. Our 156-836 exam questions have included all the information which the real exam is about and refer to the test papers in the past years. Our 156-836 cram materials analysis the popular trend among the industry and the possible answers and questions which may appear in the real exam fully. Our 156-836 Latest Exam file stimulate the real exam's environment and pace to help the learners to get a well preparation for the real exam in advance. Our 156-836 exam questions won't deviate from the pathway of the real exam and provide wrong and worthless study materials to the clients.

The CCME certification exam is ideal for professionals who are working in large organizations or managed security service providers (MSSPs) that require managing complex and distributed networks. 156-836 Exam covers topics such as deploying and managing Maestro clusters, configuring Maestro orchestration, and managing Maestro gateways.

## CheckPoint Check Point Certified Maestro Expert - R81 (CCME) Sample Questions (Q51-Q56):

### NEW QUESTION # 51

What is the Orchestrator?

- A. None of above
- **B. Manager of compute and network resources, load balancer and network switch**
- C. Network Switch
- D. Load balancer

**Answer: B**

Explanation:

The Orchestrator is a device that connects multiple security gateways into a unified system, called a security group. It manages the configuration, policy, software, and routing of the security group, and distributes the network traffic among the security gateways using a load-balancing algorithm. It also acts as a network switch for the internal and external networks.

### NEW QUESTION # 52

Layer 4 distribution is enabled by default in Maestro. Which is not a scenario when you would want to leave this enabled?

- A. When there is a large number of source ports in use by protocols such as HTTP, HTTPS, and DNS.
- B. When the SG is NATing a very high percentage of traffic passing through it.
- C. When there is a heavy imbalance of traffic between the SGMs that are members of the same SG.
- D. When dynamic routing protocols, such as BGP or OSPF are used.

**Answer: D**

Explanation:

This is the correct answer because Layer 4 distribution is not recommended when dynamic routing protocols are used in Maestro. Layer 4 distribution is a feature that adds the source and/or destination ports to the distribution equation, which can improve the load balancing among the SGMs. However, it can also cause issues with the correction layer, which is a mechanism that ensures the packets are processed by the correct SGM. Dynamic routing protocols, such as BGP or OSPF, use specific ports to exchange routing information and establish neighbor relationships. If Layer 4 distribution is enabled, it can interfere with the routing protocol packets and cause routing instability or failures.

### NEW QUESTION # 53

Logs without a dedicated log file can be found in

- A. /var/log/junk.log.dbg
- B. \$FWDIR/log/fw.log
- C. \$RTDIR/log/junk.log
- D. /var/log/messages

**Answer: D**

Explanation:

The /var/log/messages file is a general system log file that contains information about various system events, such as booting, shutdown, cron jobs, kernel messages, and other system services. Logs without a dedicated log file can be found in this file, as well as some Maestro Gaia Clish commands that are not saved in the /var/log/command\_logger.log file.

### NEW QUESTION # 54

Which command is used to set the number of sites in a Maestro environment?

- A. set maestro configuration orchestrator-site-number
- B. set maestro configuration orchestrator-site-amount
- C. set maestro configuration orchestrator-site-id

- D. set maestro orchestrator-site-amount

**Answer: B**

Explanation:

Explanation

This command is used to set the number of sites in a Maestro environment, which can be either one or two.

The number of sites determines the site-sync configuration and the failover policies for the Security Groups and the Security Group Members. The default value is one, and it can be changed only before the first Security Group is created.

## NEW QUESTION # 55

To display processes that are consuming excessive system resources, users should use the \_\_\_\_\_ command.

- A. asg stat -v
- B. asg perf -v
- C. top
- D. asg\_perf\_hogs

**Answer: D**

Explanation:

The asg\_perf\_hogs command is a script that displays the processes that are consuming excessive system resources, such as CPU, memory, disk, and network, on the orchestrator and the appliances. It can help identify performance issues and bottlenecks in the Maestro environment.
