Free PDF Unparalleled Salesforce - PDII - Platform Developer II New Dumps Free

In recent years, the market has been plagued by the proliferation of learning products on qualifying examinations, so it is extremely difficult to find and select our PDII test questions in many similar products. However, we believe that with the excellent quality and good reputation of our study materials, we will be able to let users select us in many products. Our study materials allow users to use the PDII Certification guide for free to help users better understand our products better. Even if you find that part of it is not for you, you can still choose other types of learning materials in our study materials. We can meet all your requirements and solve all your problems by our PDII certification guide.

Salesforce Platform Developer II Sample Questions (Q145-Q150):

NEW QUESTION # 145
Which of the follow be used together in DML operations (transaction)? (Choose two.)

- A. Case - CaseComment
- B. Opportunity - User
- C. Account - Order
- D. Account - AccountShare

Answer: A,C

NEW QUESTION # 146

A company represents their customers as Accounts in Salesforce. All customers have a unique Customer_Number__c that is unique across all of the company's systems. They also have a custom Invoice__c object, with a Lookup to Account, to represent invoices that are sent out from their external system. This company wants to integrate invoice data back into Salesforce so Sales Reps can see when a customer is paying their bills on time.

What is the optimal way to implement this?

- A. Query the Account Object upon each call to insert invoice data to fetch the Salesforce ID corresponding to the Customer Number on the invoice.
- B. Create a cross-reference table in the custom invoicing system with the Salesforce Account ID of each Customer and insert invoice data nightly.
- C. Use Salesforce Connect and external data objects to seamlessly import the invoice data into Salesforce without custom code.
- D. Ensure Customer_Number__c is an External ID and that a custom field Invoice_Number__c is an External ID and Upsert invoice data nightly.

Answer: D

NEW QUESTION # 147

Java
@isTest
static void testUpdateSuccess() {
Account acet = new Account(Name = 'test');
insert acet;
// Add code here
extension.inputValue = 'test';
PageReference pageRef = extension.update();
System.assertNotEquals(null, pageRef);
}

What should be added to the setup, in the location indicated, for the unit test above to create the controller extension for the test?

- A. ApexPages.StandardController sc = new ApexPages.StandardController(acet.Id); AccountControllerExt extension = new AccountControllerExt(sc);
- B. AccountControllerExt extension = new AccountControllerExt(acet.Id);
- C. ApexPages.StandardController sc = new ApexPages.StandardController(acet); AccountControllerExt extension = new AccountControllerExt(sc);
- D. AccountControllerExt extension = new AccountControllerExt(acet);

Answer: C

Explanation:
123
To properly test a Visualforce Controller Extension in Apex, the developer must replicate the instantiation process used by the Lightning Platform at runtime. A4 controller extension is a class whose constructor is specifically defined to accept a single parameter of the type ApexPages.StandardController. 5The standard controller acts as the bridge b6etween the custom extension logic and the underlying Salesforce record (in this case, an Account).

In the provided test method, a record acet has been inserted into the database. To create the extension object, the developer must first instantiate the StandardController by passing the acet SObject record into its constructor. Once the standard controller instance (e.g., sc) is created, it is then passed into the constructor of the AccountControllerExt class. Option B is the correct implementation of this two-step pattern. Option C is incorrect because the StandardController constructor requires a full SObject record, not just an ID string.

Options A and D are incorrect because extension classes do not support constructors that take an SObject or an ID directly; they specifically require the StandardController object to provide the necessary context for standard actions and fields. Following the correct pattern ensures the test accurately simulates the page execution context.

NEW QUESTION # 148

Universal Containers uses Salesforce to track orders in an order__c object.

The order = object has private organization-wide defaults. The order = object has a custom field, Quality_Controller_c, that is a Lookup to User and is used to indicate that the specified User is performing quality control on the order_ co.

What should be used to automatically give read only access to the User set in the Quality_Controller field?

- A. Apex managed sharing
- B. User managed sharing
- C. Record ownership
- D. Criteria-based sharing

Answer: B

NEW QUESTION # 149

A company wants to implement a new call center process for handling customer service calls. It requires service reps to ask for the caller's account number before proceeding with the rest of their call script.

Following best practices, what should a developer use to meet this requirement?

- A. Apex Trigger
- B. Approvals
- C. Process Builder
- D. Flow Builder

Answer: C
