NEW QUESTION # 54
When configuring dual encryption, which key management method is supported?

- A. Lockdown Mode Enabled
- B. Trusted Platform Module
- C. External Key Manager
- D. Native Key Manager

Answer: C

Explanation:
When configuring dual encryption in Nutanix, anExternal Key Manager(EKM) is required. This allows the cluster to use an external hardware-based or software-based key management system to securely store and manage encryption keys. The combination of external and native encryption ensures compliance with high security standards.
* A. Trusted Platform Module:Incorrect, as TPM is not used for managing dual encryption keys.
* B. External Key Manager:Correct, as dual encryption relies on an external system to manage keys.
* C. Native Key Manager:Incorrect, as native key management alone does not support dual encryption.
* D. Lockdown Mode Enabled:Incorrect, as Lockdown Mode relates to cluster security, not encryption key management.

NEW QUESTION # 55
In Prism Element, to which object are policies such as replication factor and storage efficiency settings applied?

- A. vBlock
- B. Container
- C. Storage Pool
- D. Virtual Machine

Answer: B

Explanation:
In Prism Element, policies such as replication factor and storage efficiency settings are applied to Containers. A container is a logical grouping of one or more storage pools and defines the storage resources available to virtual machines. By applying policies to a container, you can set the replication factor, storage efficiency settings, and other storage-related settings for all of the virtual machines that are associated with that container. This is a fundamental concept in Nutanix Platform.

NEW QUESTION # 56

- B. Flow Virtual Networking
- C. Nutanix Database Service
- D. Nutanix Kubernetes Platform
