問題 #42

It is a best practice to upload FortiAnalyzer local logs to a remote server. Which three remote servers are supported for the upload? (Choose three.)

- A. SFTP
- B. UDP
- C. TCP
- D. FTP
- E. SCP

答案： A,D,E

問題 #43

Which two external servers can you configure to validate administrator logins? (Choose two.)

- A. Only locally by FortiAnalyzer
- B. RADIUS
- C. LDAP
- D. Syslog

答案： B,C

問題 #44

After generating a report, you notice the information you were expecting to see is not included in it. However, you confirm that the logs are there:

Which two actions should you perform? (Choose two.)

- A. Test the dataset.
- B. Check the time frame covered by the report.
- C. Increase the report utilization quota.
- D. Disable auto-cache.

答案： A,B

解題說明:

Exact Extract: Study Guide p.189: for missing report data, check the report time frame and test the dataset.

Technical Deep Dive: The correct answers are A and D. If the logs exist but the generated report lacks expected information, the first checks are whether the report time frame includes those logs and whether the dataset query returns the expected rows. Reports are only as accurate as their time filter and SQL dataset.

Disabling auto-cache is not the normal fix; cache improves performance and scheduled reports use it.

Increasing a quota does not correct a wrong time range or broken SQL query unless the report fails for resource reasons, which is not the scenario described.

問題 #45

Which statement correctly describes one Difference between templates and reports?

- A. Templates can be cloned, but reports cannot be cloned.
- **B. Reports provide more configuration options than templates**
- C. Reports support macros, but templates do not.
- D. Template are mapped to device groups. while reports are mapped to ADOMs

答案： B

解題說明：

Exact Extract: Study Guide p.168-p.172: templates define layout, while reports include report settings and more configuration.

Technical Deep Dive: The correct answer is A. Reports provide more configuration options because they include the layout/template plus operational settings such as time period, target devices, scheduling, filters, output behavior, and advanced settings. Templates contain the Editor-tab layout elements and do not include basic or advanced report settings. Option B is wrong because both reports and templates can be cloned.

Option C is wrong because templates can include macros. Option D is wrong because templates are not mapped to device groups as stated.

問題 #46

Refer to the exhibit. Which statement about the displayed event is correct?

Event	Event Status	Event Type	Severity
56834764387462384.org (4)	Unhandled	Web Filter	Critical
Web traffic to C&C from 10.0.1.200 detected	Unhandled	Web Filter	Critical

- A. The risk source is isolated.
- B. An incident was created from this event.
- C. The security risk was blocked or dropped.
- **D. The security event risk is considered open.**

答案： D

解題說明：

Unhandled: The security event risk is not mitigated or contained, so it is considered open.

For example, an IPS/AV log with action=pass will have the event status Unhandled.

Botnet and IoC events are also considered Unhandled.
