## Nutanix Certified Professional - Multicloud Automation (NCP-MCA 6.10) Sample Questions (Q69-Q74):

### NEW QUESTION # 69

An administrator on a routine basis has been manually growing vDisks on multiple classes of VMs that consists of the below:

- \* Four MS SQL will AAG configuration
- \* Ten application servers
- \* Each server is mapped to a category

There is a direct correlation between the database servers and application servers to when the vDisks need to be grown. The administrator has started to explore ways to automate these manual steps and has decided to implement Nutanix Playbooks. Requirements:

- \* Never needs to modify the playbook as the number of servers change.
- \* Has to be able to specify the playbook to trigger based on when the servers (each 85% or above threshold).
- \* Needs to be able to receive an email prior to work starting

In which order should the administrator execute these actions when creating a playbook in order to grow the VM vDisk?

**Answer:**

Explanation:

#### NEW QUESTION # 70

What component of Approval Policies sets the criteria for an approval to be triggered?

- **A. Conditions**
- B. Alerts
- C. Actions
- D. Jobs

**Answer: A**

Explanation:

In Approval Policies within Nutanix Calm, "Conditions" are used to set the criteria for an approval to be triggered. Conditions define the specific circumstances under which an approval process should be initiated, such as specific actions or threshold limits.

#### NEW QUESTION # 71

Which Calm feature enables the ability to enforce project quotas for the ESXi hypervisor?

- **A. Project Quotas**
- B. Runbooks
- C. Project Environments
- D. Policy Engine

**Answer: A**

#### NEW QUESTION # 72

Which Calm feature enables the ability to enforce project quotas for the ESXi hypervisor?

- A. Project Quotas
- **B. Policy Engine**
- C. Runbooks
- D. Project Environments

**Answer: B**

Explanation:

The Policy Engine is a Calm feature that allows you to define and enforce policies for your projects, such as quotas, approvals, and actions. You can use the Policy Engine to set project quotas for the ESXi hypervisor, such as the number of VMs, CPU cores, memory, and storage that can be provisioned by the project. This helps you to control the resource consumption and allocation of your ESXi clusters. References:
