

Valid Test Amazon CLF-C02 Test, CLF-C02 Reliable Exam Book

What's more, part of that Exam4Free CLF-C02 dumps now are free: https://drive.google.com/open?id=15G48rflMj0P3MDNIT40sn_IKNwesj9i-

Exam4Free have a professional IT team to do research for practice questions and answers of the Amazon CLF-C02 exam certification exam. They provide a very effective training tools and online services for your. If you want to buy Exam4Free products, Exam4Free will provide you with the latest, the best quality and very detailed training materials as well as a very accurate exam practice questions and answers to be fully prepared for you to participate in the Amazon Certification CLF-C02 Exam. Safely use the questions provided by Exam4Free's products. Selecting the Exam4Free is equal to be 100% passing the exam.

Amazon CLF-C02 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • Cloud Concepts: This section involves knowledge of value proposition and exploring design rules of AWS. It covers the advantages of techniques for moving over to AWS cloud and developing a good understanding of cloud economics.
Topic 2	<ul style="list-style-type: none"> • Cloud Technology and Services: Describe ways to access AWS services in AWS Cloud and explore connectivity options. It deals with defining the global infrastructure of AWS, computing services, and network services.
Topic 3	<ul style="list-style-type: none"> • Billing, Pricing, and Support: This section contrasts pricing methods and budgeting resources management. It also tests understanding of billing methods, identifying support options, and technical resources.
Topic 4	<ul style="list-style-type: none"> • Security and Compliance: This section involves understanding the shared responsibility framework of AWS in addition to compliance and governance. It also involves exploring the management capabilities of AWS by exploring its security capabilities.

CLF-C02 Reliable Exam Book, New CLF-C02 Exam Simulator

It is apparent that a majority of people who are preparing for the CLF-C02 exam would unavoidably feel nervous as the exam approaching, since you have clicked into this website, you can just take it easy now--our CLF-C02 learning materials. Our company has spent more than 10 years on compiling study materials for the exam, and now we are delighted to be here to share our CLF-C02 Study Materials with all of the candidates for the exam in this field. There are so many striking points of our CLF-C02 preparation exam.

Amazon AWS Certified Cloud Practitioner Sample Questions (Q688-Q693):

NEW QUESTION # 688

A company is building an application that will receive millions of database queries each second. The company needs the data store for the application to scale to meet these needs. Which AWS service will meet this requirement?

- A. Amazon ElastiCache for Memcached
- B. Amazon DynamoDB
- C. AWS Cloud9
- D. Amazon Neptune

Answer: B

Explanation:

Amazon DynamoDB is the AWS service that will meet the requirement of building an application that will receive millions of database queries each second. Amazon DynamoDB is a fully managed NoSQL database service that provides fast and consistent performance, scalability, and durability. Amazon DynamoDB can handle any level of request traffic and automatically scale up or down the capacity based on the demand. Amazon DynamoDB also supports in-memory caching with Amazon DynamoDB Accelerator (DAX) to improve the response time and reduce the cost. For more information, see [What is Amazon DynamoDB?](#) and [Amazon DynamoDB Features](#).

NEW QUESTION # 689

A company's application stores data in an Amazon S3 bucket. The company has an AWS Lambda function that processes data in the S3 bucket. The company needs to invoke the function once a day at a specific time. Which AWS service should the company use to meet this requirement?

- A. AWS CodeStar
- B. AWS Managed Services (AMS)
- C. AWS Step Functions
- D. Amazon EventBridge

Answer: D

Explanation:

Amazon EventBridge is the service that the company should use to meet the requirement of invoking the Lambda function once a day at a specific time. Amazon EventBridge is a serverless event bus service that allows you to easily connect your applications with data from AWS services, SaaS applications, and your own applications. You can use Amazon EventBridge to create rules that match events and route them to targets such as AWS Lambda functions, Amazon SNS topics, Amazon SQS queues, or other AWS services. You can also use Amazon EventBridge to create scheduled rules that trigger your targets at a specific time or interval, such as once a day. AWS Managed Services (AMS), AWS CodeStar, and AWS Step Functions are not services that the company should use to meet this requirement. AMS is a service that provides operational management for your AWS infrastructure and applications. AWS CodeStar is a service that provides a unified user interface for managing software development projects on AWS. AWS Step Functions is a service that coordinates multiple AWS services into serverless workflows.

NEW QUESTION # 690

Which AWS service or feature identifies whether an Amazon S3 bucket or an IAM role has been shared with an external entity?

- A. AWS Service Catalog
- **B. AWS IAM Access Analyzer**
- C. AWS Systems Manager
- D. AWS Organizations

Answer: B

Explanation:

AWS IAM Access Analyzer is a service that helps you identify the resources in your organization and accounts, such as Amazon S3 buckets or IAM roles, that are shared with an external entity. This lets you identify unintended access to your resources and data, which is a security risk. IAM Access Analyzer uses logic-based reasoning to analyze the resource-based policies in your AWS environment. For each instance of a resource shared outside of your account, IAM Access Analyzer generates a finding. Findings include information about the access and the external principal granted to it³⁴⁵. References: 3: Using AWS Identity and Access Management Access Analyzer, 4: IAM Access Analyzer - Amazon Web Services (AWS), 5: Welcome - IAM Access Analyzer

NEW QUESTION # 691

Which duties are the responsibility of a company that is using AWS Lambda? (Select TWO.)

- A. Patching of operating system
- **B. Security inside of code**
- C. Security of underlying infrastructure
- D. Selection of CPU resources
- **E. Writing and updating of code**

Answer: B,E

Explanation:

The duties that are the responsibility of a company that is using AWS Lambda are security inside of code and writing and updating of code. AWS Lambda is a serverless compute service that allows you to run code without provisioning or managing servers, scaling, or patching. AWS Lambda takes care of the security of the underlying infrastructure, such as the operating system, the network, and the firewall. However, the company is still responsible for the security of the code itself, such as encrypting sensitive data, validating input, and handling errors. The company is also responsible for writing and updating the code that defines the Lambda function, and choosing the runtime environment, such as Node.js, Python, or Java. AWS Lambda does not require the selection of CPU resources, as it automatically allocates them based on the memory configuration³⁴

NEW QUESTION # 692

Which tasks are customer responsibilities, according to the AWS shared responsibility model? (Select TWO.)

- **A. Classify company assets in the AWS Cloud.**
- B. Patch or upgrade Amazon DynamoDB.
- C. Determine which Availability Zones to use for Amazon S3 buckets.
- D. AWS Config
- E. Select Amazon EC2 instances to run AWS Lambda on.
- **F. Configure the AWS provided security group firewall.**

Answer: A,F

Explanation:

According to the AWS shared responsibility model, the customer is responsible for security in the cloud, which includes the tasks of configuring the AWS provided security group firewall and classifying company assets in the AWS Cloud. A security group is a virtual firewall that controls the inbound and outbound traffic for one or more EC2 instances. The customer must configure the security group rules to allow or deny traffic based on protocol, port, or source and destination IP address² Classifying company assets in the AWS Cloud means identifying the types, categories, and sensitivity levels of the data and resources that the customer stores and processes on AWS. The customer must also determine the applicable compliance requirements and regulations that apply to their assets, and implement the appropriate security controls and measures to protect them

NEW QUESTION # 693

.....

I know your time is very valuable. We guarantee that you can download our products CLF-C02 exam questions immediately after payment is successful. After your current page shows that the payment was successful, you can open your e-mail address to receive our CLF-C02 Study Materials. And you can find that you can get CLF-C02 learning guide only in 5 to 10 minutes. It is very fast and easy. And our CLF-C02 practice engine is auto installed, so you don't have to do more work.
