

Pass Guaranteed VMware - Authoritative Valid 2V0-13.25 Test Online

2026 Latest Prep4King 2V0-13.25 PDF Dumps and 2V0-13.25 Exam Engine Free Share: https://drive.google.com/open?id=1MofS_UDHd0DN836cCC_apzbW_9HeDtGp

Before you buy our product, you can download and try out it freely so you can have a good understanding of our 2V0-13.25 test prep. The page of our product provide the demo and the aim to provide the demo is to let the client understand part of our titles before their purchase and see what form the software is after the client open it. The client can visit the page of our product on the website. We guarantee to you our 2V0-13.25 Exam Materials can help you and you will have an extremely high possibility to pass the exam.

VMware 2V0-13.25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Plan and Design the VMware Solution: This section measures the skills of Cloud Infrastructure Designers. It focuses on gathering and analyzing business requirements and then transforming them into conceptual, logical, and physical models of VMware Cloud Foundation. Candidates are expected to identify prerequisites and make design decisions across fleet topologies, networking, management domains, workload domains, automation, and operations. The section also includes designing for availability within and across zones, creating strategies for manageability such as lifecycle, scalability, and capacity, and ensuring performance and recoverability through BCDR strategies. Additional emphasis is given to designing secure environments, workload migration strategies, and creating consumption, automation, and monitoring strategies to support modern applications and governance.
Topic 2	<ul style="list-style-type: none"> Troubleshoot and Optimize the VMware Solution: This section of the exam measures the skills of Operations Engineers. There are no explicitly testable objectives provided in this domain, but candidates are expected to understand troubleshooting and optimization principles to maintain the VMware environment effectively in real-world deployments.
Topic 3	<ul style="list-style-type: none"> Install, Configure, Administrate the VMware Solution: This section of the exam is relevant to System Administrators. Although it has no directly testable objectives, it underlines the expectation that candidates are familiar with installation, configuration, and administration tasks that form the foundation for VMware Cloud Foundation solutions.
Topic 4	<ul style="list-style-type: none"> VMware Products and Solutions: This section of the exam evaluates the knowledge of VMware Solution Specialists and focuses on VMware Cloud Foundation (VCF). Candidates must be able to identify and differentiate between various VCF architecture options in given scenarios. The emphasis is on understanding the key products and how they integrate into enterprise design choices.

Topic 5	<ul style="list-style-type: none"> IT Architectures, Technologies, Standards: This section of the exam measures the skills of IT Architects and covers the ability to distinguish business requirements from technical ones. It expects candidates to understand the differences between conceptual, logical, and physical designs while also differentiating requirements, assumptions, constraints, and risks. Core concepts of availability, manageability, performance, recoverability, and security (AMPRS) are tested. Learners also need to document risk mitigation strategies, design decisions, and create a validation strategy that ties requirements to practical implementation.

2V0-13.25 Exam Pass Guide, 2V0-13.25 Exam Simulator Online

Students often feel helpless when purchasing test materials, because most of the test materials cannot be read in advance, students often buy some products that sell well but are actually not suitable for them. But if you choose 2V0-13.25 test prep, you will certainly not encounter similar problems. Before you buy 2V0-13.25 learning question, you can log in to our website to download a free trial question bank, and fully experience the convenience of PDF, APP, and PC three models of 2V0-13.25 learning question. During the trial period, you can fully understand our study materials' learning mode, completely eliminate any questions you have about 2V0-13.25 test prep, and make your purchase without any worries. At the same time, if you have any questions during the trial period, you can feel free to communicate with our staff, and we will do our best to solve all the problems for you.

VMware Cloud Foundation 9.0 Architect Sample Questions (Q44-Q49):

NEW QUESTION # 44

Which Broadcom components improve the overall scalability of a VMware environment?

- A. Broadcom RAID Controller
- B. Broadcom NVMe SSD
- C. vSphere DRS
- D. Broadcom 25GbE Ethernet Adapter

Answer: C,D

Explanation:

The 25GbE Ethernet Adapter and vSphere DRS are key for improving overall scalability in VMware environments.

NEW QUESTION # 45

What strategies can improve VMware performance with Broadcom network adapters?

- A. Disable NIC offloading features
- B. Use RSS to balance network traffic
- C. Optimize network adapters for load balancing
- D. Enable Jumbo Frames

Answer: B,C,D

Explanation:

Jumbo Frames, RSS, and load balancing improve network performance in VMware environments.

NEW QUESTION # 46

Which Broadcom products are important for managing storage performance in VMware environments?

- A. vSAN
- B. vSphere DRS
- C. Broadcom NVMe SSD
- D. Broadcom RAID Controller

Answer: A,C,D

Explanation:

Broadcom RAID Controllers, vSAN, and NVMe SSDs are essential for managing storage performance in VMware environments.

NEW QUESTION # 47

An Architect has been tasked with reviewing a VMware Cloud Foundation design document.

Observe the following requirements:

REQ01: The solution must support the private cloud cybersecurity industry and local standards and controls.

REQ02: The solution must ensure that the cloud services are transitioned to operation teams.

REQ03: The solution must provide a self-service portal.

REQ04: The solution must provide the ability to consume storage based on policies.

REQ05: The solution should provide the ability to extend networks between different availability zones.

REQ06: The solution should allow only supported versions of management solutions to be deployed.

Observe the following design decisions:

DD01: There will be a clustered deployment of Aria Automation.

DD02: There will be an integration between Aria Automation and multiple geo-located vCenter Servers.

DD03: Aria Suite Lifecycle will be deployed to provide lifecycle management of Aria Suite components.

Based on the stated requirements, what are the three implications for taking the stated design decisions? (Choose three.)

- **A. An external database is required for Aria Automation clustering.**
- B. Aria Suite Lifecycle should be deployed through the SDDC Manager.
- **C. A load balancer is required for Aria Automation high availability.**
- D. The latency between the Aria Automation Appliances must be less than 2ms.
- E. The vCenter Servers must have network access to each other.
- **F. Aria Automation must have network access to all vCenter Servers.**

Answer: A,C,F

Explanation:

The design decisions (DD01, DD02, DD03) must align with the requirements (REQ01-REQ06) in a VMware Cloud Foundation (VCF) 5.2 context, and the implications must reflect architectural necessities or dependencies introduced by these decisions. Let's evaluate each option based on the requirements and decisions:

Option A: Aria Automation must have network access to all vCenter Servers Relevance: DD02 states integration between Aria Automation and multiple geo-located vCenter Servers, supporting REQ03 (self-service portal), REQ04 (policy-based storage), and REQ05 (network extension across availability zones).

Implication: Aria Automation (formerly vRealize Automation) requires network connectivity to manage vCenter Servers for workload provisioning, policy enforcement (e.g., vSphere Storage Profiles), and network extension (e.g., via NSX). The VMware Aria Automation Installation Guide mandates that Aria Automation appliances have TCP/IP access to vCenter instances over specific ports (e.g., 443). This is a direct implication of DD02 and is critical for multi-site integration.

Conclusion: This is a necessary implication.

Option B: Aria Suite Lifecycle should be deployed through the SDDC Manager Relevance: DD03 involves deploying Aria Suite Lifecycle for lifecycle management, aligning with REQ06 (supported versions of management solutions).

Implication: While SDDC Manager in VCF can deploy and manage Aria Suite components, the VMware Cloud Foundation 5.2 Administration Guide indicates that Aria Suite Lifecycle can be deployed standalone or via SDDC Manager, depending on the design. It's not a strict requirement (implication) of DD03-rather, it's a deployment choice. REQ06 is satisfied by Aria Suite Lifecycle's version control, regardless of deployment method.

Conclusion: This is not a mandatory implication, as it's not enforced by the design decisions.

Option C: An external database is required for Aria Automation clustering Relevance: DD01 specifies a clustered deployment of Aria Automation, supporting REQ03 (self-service portal) and REQ02 (transition to operations via a robust platform).

Implication: For high availability (HA) clustering, Aria Automation requires an external PostgreSQL database to synchronize state across appliances. The VMware Aria Automation Installation Guide explicitly states that clustering (three-node HA) mandates an external database (e.g., PostgreSQL 13) rather than the embedded one used in single-node setups. This ensures data consistency and failover, making it a direct implication of DD01.

Conclusion: This is a necessary implication.

Option D: A load balancer is required for Aria Automation high availability Relevance: DD01 involves a clustered deployment, supporting REQ03 and REQ02.

Implication: Aria Automation clustering for HA requires a load balancer (e.g., VMware NSX Advanced Load Balancer or third-party) to distribute traffic across the three appliances and provide a single access point. The VMware Aria Automation Installation Guide mandates a load balancer for HA configurations to ensure availability and seamless failover, directly tied to DD01. This also

supports operational transition (REQ02) by ensuring a reliable self-service portal (REQ03).

Conclusion: This is a necessary implication.

Option E: The latency between the Aria Automation Appliances must be less than 2ms Relevance: DD01 (clustered deployment).

Implication: Aria Automation clustering requires low latency between appliances for database replication and cluster health.

However, the VMware Aria Automation Installation Guide specifies a maximum latency of 10ms between nodes (not 2ms), with 2ms being a recommendation for optimal performance, not a strict requirement. In a VCF context, this isn't a mandated implication unless specified by additional constraints not present here.

Conclusion: This is not a precise implication based on standard requirements.

Option F: The vCenter Servers must have network access to each other

Relevance: DD02 (integration with multiple geo-located vCenter Servers).

Implication: While Aria Automation integrates with vCenter Servers, there's no requirement in VCF or Aria Automation for vCenter Servers to communicate directly with each other across sites unless Enhanced Linked Mode or a specific multi-site feature (e.g., stretched clusters) is in use, which isn't indicated by the requirements or decisions. REQ05 (network extension) is managed by NSX, not vCenter-to-vCenter connectivity. The VCF 5.2 Architectural Guide confirms vCenter Servers can operate independently under Aria Automation.

Conclusion: This is not an implication of the stated decisions.

Conclusion:

The three implications are:

A: Network access from Aria Automation to vCenter Servers is required for DD02.

C: An external database is mandatory for Aria Automation clustering per DD01.

D: A load balancer is essential for HA in Aria Automation clustering per DD01. These align with the requirements and design decisions in a VCF 5.2 context.

NEW QUESTION # 48

An architect is tasked with designing a VMware Cloud Foundation (VCF) solution for a financial services organization to modernize its core banking applications and high-frequency trading systems using vSAN.

The following requirements were gathered:

* For critical transactional database workloads, the solution must provide low-latency and high performance storage.

* For all non-critical workloads, the solution must provide the most efficient capacity utilization.

Which three design decisions would the architect make to meet the requirements for the workload domain cluster? (Choose three.)

- A. Configure vSAN Policies (RAID-1) for all critical transactional database workloads.
- B. Configure vSAN Policies (RAID-5/6) for all non-critical workloads.
- C. Deploy a vSAN ESA cluster with a minimum of 6 nodes.
- D. Configure vSAN Policies (RAID-1) for all workloads.
- E. Deploy a vSAN OSA (All-NVMe) cluster with a minimum of 4 nodes.
- F. Configure vSAN Policies (RAID-5) for all critical transactional database workloads.

Answer: A,B,C

Explanation:

* RAID-1 policies offer low latency and high performance, ideal for critical workloads such as transactional databases.

* RAID-5/6 provides efficient capacity usage, which is preferred for non-critical workloads.

* VMware recommends the vSAN Express Storage Architecture (ESA) with 6 nodes minimum for performance and redundancy. The ESA supports better performance with fewer overheads than OSA.

VMware Cloud Foundation 9.0 promotes using vSAN ESA for mission-critical workloads when latency is a priority.

NEW QUESTION # 49

.....

Because industry of information technology is fast-moving. To excel in this advanced industry, pass the 2V0-13.25 exam of the VMware 2V0-13.25 certification. Hundreds of applicants have faced issues in updated dumps material to crack the VMware 2V0-13.25 examination in one go.
