## Fortinet NSE6\_FSR-7.3 Dumps - Secret To Pass In First Attempt [2024]

Are you looking to pass the Fortinet Certified Professional FCP Fortinet Certified Professional Security Operations exam on the first attempt? You must be aware that passing the Fortinet Certified Professional FCP Fortinet Certified Professional Security Operations exam will open up new career options for you. You know how important this step is for you. You must not take any risks when it comes to the FCP Fortinet Certified Professional Security Operations exam preparation.

Numerous candidates fail the Fortinet NSE 6 - FortiSOAR 7.3 Administrator exam each attempt. This is concerning. This is why you must prepare from the most reliable Fortinet Certified Professional exam preparation material. The syllabus of the FCP Fortinet Certified Professional Security Operations exam is tough and requires extra help.

This is why you need to obtain the perfect Fortinet NSE6\_FSR-7.3 Dumps to pass the exam on the first attempt. Be sure to not risk your shining future and prepare for the exam in the correct way. Why is it necessary to have reliable Fortinet Certified Professional Exam Preparation Material? This question is answered below.

## Fortinet FCP\_GCS\_AD-7.6 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Identify Google Cloud core networking components: This section focuses on VPCs, subnets, routes, firewalls, and connectivity options within Google Cloud networking.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>Understand FortiGate Google Cloud SDN integration: This section explains how FortiGate integrates with Google Cloud SDN for dynamic policy updates and automation.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>Identify Fortinet products on Google Cloud Marketplace: This topic covers available Fortinet security solutions that can be deployed directly from the Google Cloud Marketplace.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>Identify supported protocols: This topic outlines the network and application protocols supported by FortiGate and Google Cloud deployments.</li></ul>
Topic 5	<ul style="list-style-type: none"><li>Define auto-scaling in Google Cloud: This topic explains how Google Cloud automatically adjusts compute resources based on workload demand.</li></ul>
Topic 6	<ul style="list-style-type: none"><li>Describe FortiWeb Cloud: This section explains the features and deployment model of FortiWeb Cloud as a SaaS-based WAF solution.</li></ul>
Topic 7	<ul style="list-style-type: none"><li>Define public cloud service terms: This section explains key terminology such as IaaS, PaaS, SaaS, regions, zones, and shared responsibility models.</li></ul>
Topic 8	<ul style="list-style-type: none"><li>Describe traffic flow for FortiGate Google Cloud architectures: This section outlines how traffic moves through FortiGate instances in various Google Cloud deployment models.</li></ul>
Topic 9	<ul style="list-style-type: none"><li>Identify FortiGate architectures: This section describes different FortiGate deployment architectures supported in Google Cloud environments.</li></ul>

Topic 10	<ul style="list-style-type: none"> <li>Understand symmetric hashing: This topic describes symmetric hashing mechanisms used to maintain session persistence in load-balanced environments.</li> </ul>
Topic 11	<ul style="list-style-type: none"> <li>Identify threats and challenges in the public cloud: This area focuses on common security risks, compliance issues, and operational challenges faced in public cloud environments.</li> </ul>
Topic 12	<ul style="list-style-type: none"> <li>Describe FGCP A-P HA: This topic explains FortiGate Clustering Protocol Active-Passive high availability architecture and its failover process.</li> </ul>
Topic 13	<ul style="list-style-type: none"> <li>Understand various load balancing operations: This section explains how load balancers distribute traffic, perform health checks, and ensure service availability.</li> </ul>
Topic 14	<ul style="list-style-type: none"> <li>Examine use cases for deploying FortiGate: This topic explains practical deployment scenarios such as perimeter security, segmentation, and secure connectivity.</li> </ul>
Topic 15	<ul style="list-style-type: none"> <li>Explain different HA architectures in Google Cloud: This section covers high availability design models used to ensure redundancy and fault tolerance.</li> </ul>
Topic 16	<ul style="list-style-type: none"> <li>Identify Fortinet WAF solutions for Google Cloud: This topic introduces Fortinet Web Application Firewall solutions designed to protect web applications in Google Cloud.</li> </ul>
Topic 17	<ul style="list-style-type: none"> <li>Describe FGCP A-A HA: This section describes FortiGate Clustering Protocol Active-Active high availability and traffic distribution between nodes.</li> </ul>
Topic 18	<ul style="list-style-type: none"> <li>Identify different types of load balancers: This topic covers the various load balancing options available in Google Cloud environments.</li> </ul>
Topic 19	<ul style="list-style-type: none"> <li>Describe Fortinet Github: This section covers the purpose of Fortinet GitHub resources, including deployment templates, scripts, and automation tools.</li> </ul>

### **Fortinet FCP - Google Cloud Security 7.6 Administrator Sample Questions (Q27-Q32):**

#### **NEW QUESTION # 27**

An administrator has been tasked with modifying their organization's existing active-passive high-availability (HA) FortiGate cluster and turn it into an active-active HA cluster.

Which two behavior changes will the administrator see in the cluster after the change? (Choose two.)

- **A. The cluster no longer act as a single logical instance.**
- **B. There is no longer a need to reserve a dedicated port for HA communications.**
- C. The sessions will no longer be synchronized between cluster members.
- D. The configuration will no longer be synchronized between cluster members.

**Answer: A,B**

Explanation:

Active-active HA does not require a dedicated HA communication port as each member handles traffic independently. In active-active mode, cluster members operate more independently and do not present as a single logical device like in active-passive mode.

#### **NEW QUESTION # 28**

Google Cloud network services offer vast functionality and inter-connectivity between the cloud and on- premises networks. Which three additional functions does FortiGate offer when deployed in Google Cloud to complement the native services offered by Google Cloud? (Choose three.)

- A. Web filtering
- B. Secure SD-WAN with application visibility
- C. OSPF over IPSec
- D. SSL inspection
- E. SSL VPN

**Answer: B,D,E**

Explanation:

FortiGate provides SSL VPN capabilities for secure remote access.

It offers SSL inspection to decrypt and inspect encrypted traffic for threats.

FortiGate supports Secure SD-WAN with deep application visibility and control, enhancing network performance and security beyond native Google Cloud services.

#### **NEW QUESTION # 29**

Your organization is deciding between deploying FortiGate active-passive high-availability (HA) in Google Cloud using either the software-defined network (SDN) connector or load balancers.

What two reasons should your organization choose the SDN connector over the load balancer deployment?

(Choose two.)

- A. There is less administrative overhead.
- B. Cost is lower.
- C. The SDN connector supports multizone failover.
- D. Failovers are faster because of to API calls.

**Answer: A,B**

Explanation:

Using the SDN connector avoids additional load balancer costs, making it more cost-effective.

The SDN connector enables multizone failover by directly managing network routing, which load balancers do not inherently support.

#### **NEW QUESTION # 30**

For what three reasons must you deploy a set of Google Cloud passthrough network load balancers for an active-passive high-availability (HA) FortiGate cluster instead of a set of Google Cloud proxy network load balancers? (Choose three.)

- A. Passthrough network load balancers terminate SSL connections.
- B. Passthrough network load balancers support health checks.
- C. Passthrough network load balancers can forward all protocols.
- D. Passthrough network load balancers offer the highest throughput.
- E. Passthrough network load balancers rely on API calls from FortiGate devices during HA failovers.

**Answer: B,C,D**

Explanation:

Passthrough load balancers support health checks to monitor backend health for failover.

They can forward all protocols, not limited to HTTP/HTTPS like proxy load balancers.  
Passthrough load balancers provide higher throughput because they don't terminate sessions.

### NEW QUESTION # 31

An administrator configured an external fabric connector for Google Cloud to pull information from Google Cloud, including addresses, VM names, and subnets to create firewall policies.

When trying to create dynamic firewall addresses, the list of available instances does not populate any information from Google Cloud.

Which two issues are the most probable cause? (Choose two.)

- A. The VM instances in Google Cloud have multiple IP address assigned to them.
- **B. There are no VM instances deployed in Google Cloud.**
- C. The VM instances in Google Cloud were not deployed using Google Cloud marketplace.
- **D. Google Cloud Metadata API access is disabled for Compute Engine for the FortiGate instance.**

**Answer: B,D**

Explanation:

The external fabric connector relies on Google Cloud Metadata API access to retrieve instance information; if this is disabled, data won't populate.

If no VM instances exist in the project, there will be no instance data for the connector to retrieve.
