## EMC Dell Information Storage and Management Foundations v2 Exam Sample Questions (Q49-Q54):

### NEW QUESTION # 49

Question:

What is a key challenge in managing the variety aspects of Big Data?

- A. Generating real-time data
- B. Storing transaction-based data over the years
- C. Combining data from various sources and formats cost-effectively
- D. Reducing data volume to manageable sizes

**Answer: C**

Explanation:

Big Data's "variety" refers to the challenge of integrating different data types (structured, semi-structured, unstructured) from various sources.

The key challenge is to combine and manage this data cost-effectively, ensuring analytics systems can process it seamlessly.

\* Generating real-time data is about velocity, not variety.

\* Storing data over years is about volume.

\* Reducing volume is more about data management, not variety.

### NEW QUESTION # 50

Question:

How does Storage Class Memory (SCM) compare to DRAM and flash memory in terms of speed?

- A. SCM is slower than flash but faster than HDDs
- B. SCM is faster than both DRAM and flash
- C. SCM is as fast as DRAM
- D. SCM is slower than DRAM but faster than flash

**Answer: D**

Explanation:

Storage Class Memory (SCM) bridges the gap between DRAM and NAND flash memory. It offers faster access times than flash memory but is still slower than DRAM. SCM provides non-volatile storage with performance characteristics closer to DRAM, making it suitable for applications requiring high-speed data access.

### NEW QUESTION # 51

Question:

What is the most common technique used by malware protection software to detect malware?

- A. Heuristic analysis
- B. Signature-based detection
- C. Behavioral analysis
- D. Reputation-based analysis

**Answer: B**

Explanation:

Signature-based detection is the most common method of malware detection. It works by comparing files and data to a database of

known malware signatures:

Fast and efficient for known threats.

Updated regularly by security vendors.

\* Reputation-based: Looks at the trustworthiness of files/domains.

\* Behavioral: Monitors actions and identifies suspicious patterns.

\* Heuristic: Detects new malware based on file behaviors and patterns, useful for unknown threats.

## NEW QUESTION # 52

Question:

What is the main advantage of 5G technology over previous generations of mobile networks?

- A. Lower cost
- B. Reduced distance
- C. Increased bandwidth
- **D. Increased speed and capacity**

**Answer: D**

Explanation:

5G represents the fifth generation of mobile networks and offers several significant advantages over 4G, 3G, and earlier generations:

\* Increased speed: 5G delivers data speeds up to 100 times faster than 4G LTE.

\* Enhanced capacity: Supports more devices per square kilometer, crucial for IoT and smart cities.

\* Low latency: Reduces delay in data transmission, enabling real-time applications like remote surgeries or autonomous vehicles.

\* Increased bandwidth (Option B) is part of the overall increased capacity.

\* Reduced distance (Option C) is incorrect; 5G uses shorter wavelengths, meaning shorter range.

\* Lower cost (Option D) is not a key advantage of 5G technology itself.

## NEW QUESTION # 53

Question:

Which two interfaces does an OSD (Object Storage Device) gateway typically present to applications?

- **A. REST and SOAP APIs**
- B. HTTP and HTTPS
- C. SSH and SMB
- D. File-based interfaces like NFS and CIFS

**Answer: A**

Explanation:

OSD gateways provide access to object storage systems through APIs. The most common interfaces are:

\* REST (Representational State Transfer): A stateless protocol using standard HTTP methods, widely used for web services.

\* SOAP (Simple Object Access Protocol): A protocol for exchanging structured information in web services, using XML.

These APIs allow applications to interact with object storage systems over HTTP/HTTPS protocols.

\* SSH and SMB: SSH is for secure shell access; SMB is for file sharing, not typically used for object storage.

\* HTTP and HTTPS: These are transport protocols; while used by REST and SOAP, they are not interfaces themselves.

\* NFS and CIFS: File-based interfaces, not used for object storage.
