

FCSS_SASE_AD-24 Practice Test Online | FCSS_SASE_AD-24 Reliable Exam Sims

BONUS!!! Download part of ITPassLeader FCSS_SASE_AD-24 dumps for free: https://drive.google.com/open?id=1KjHcp2npg-6_enJx6gKnMz8uwKFdkP5Y

Our FCSS_SASE_AD-24 learning prep boosts many advantages and varied functions to make your learning relaxing and efficient. The client can have a free download and tryout of our FCSS_SASE_AD-24 exam torrent before they purchase our product and can download our FCSS_SASE_AD-24 study materials immediately after the client pay successfully. And if there is the update of our FCSS_SASE_AD-24 learning guide the system will send the update automatically to the client. Thus you can have an efficient learning and a good preparation of the exam. It is believed that our FCSS_SASE_AD-24 latest question is absolutely good choices for you.

More and more people choose Fortinet FCSS_SASE_AD-24 exam. Because of its popularity, you can use the ITPassLeader Fortinet FCSS_SASE_AD-24 exam questions and answers to pass the exam. This will bring you great convenience and comfort. This is a practice test website. It is available on the Internet with the exam questions and answers, as we all know, ITPassLeader is the professional website which provide Fortinet FCSS_SASE_AD-24 Exam Questions And Answers.

>> FCSS_SASE_AD-24 Practice Test Online <<

Get the Fortinet FCSS_SASE_AD-24 Certification within the Target Period

The precision and accuracy of ITPassLeader's dumps are beyond other exam materials. They are time-tested and approved by the veteran professionals who recommend them as the easiest way-out for FCSS_SASE_AD-24 certification tests. FCSS_SASE_AD-

24 Exam Materials constantly updated by our experts, enhancing them in line with the changing standards of real exam criteria. Therefore, our FCSS_SASE_AD-24 dumps prove always compatible to your academic requirement.

Fortinet FCSS_SASE_AD-24 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• SASE Deployment: This domain assesses the capabilities of Cloud Security Architects in deploying SASE solutions. It includes implementing various user onboarding methods, configuring administration settings, and applying security posture checks and compliance rules to ensure a secure environment.
Topic 2	<ul style="list-style-type: none">• SIA, SSA, and SPA: This section focuses on the skills of Security Administrators in designing security profiles for content inspection and deploying SD-WAN and Zero Trust Network Access (ZTNA) using SASE. Understanding these concepts is crucial for securing access to applications and data across the network.
Topic 3	<ul style="list-style-type: none">• SASE Architecture and Components: This section measures the skills of Network Security Engineers and covers the architecture and components of FortiSASE. It includes integrating FortiSASE into a hybrid network, identifying its components, and constructing deployment cases to effectively implement SASE solutions.
Topic 4	<ul style="list-style-type: none">• Analytics: This domain evaluates the skills of Data Analysts in utilizing analytics within FortiSASE. It involves identifying potential security threats using traffic logs, configuring dashboards and logging settings, and analyzing reports for user traffic and security issues to enhance overall security posture.

Fortinet FCSS - FortiSASE 24 Administrator Sample Questions (Q30-Q35):

NEW QUESTION # 30

Which FortiSASE feature can you use to see a list of Software-as-a-Service (SaaS) applications and health-check metrics for first-mile connectivity between the geographical points of presence (PoPs) provisioned for your FortiSASE instance and these SaaS applications?

Response:

- A. digital experience monitoring DEM
- B. security logs
- C. FortiView
- D. event logs

Answer: A

NEW QUESTION # 31

Refer to the exhibit.

User Productivity

Application Usage

The FortiGuard research team categorizes applications into different categories based on the application behavioral characteristics, underlying technology, and the related traffic transaction characteristics. The categories allow for better application control. FortiGuard maintains thousands of application sensors and can even perform deep application inspection. For example, IT managers can get unprecedented visibility into filenames sent to the cloud or the titles of videos being streamed.

App Categories

Unknown	41.81%
Web.Client	22.86%
Network.Service	15.14%
General.Interest	12.00%
Collaboration	6.23%
Update	1.50%
Video/Audio	0.21%
Social.Media	0.18%
Email	0.07%

For application category details, see: <http://www.fortiguard.com/en/lookup/application>

With the proliferation of cloud-based computing, enterprises are increasingly reliant on third parties for infrastructure plumbing. Unfortunately for enterprises, this means that their information is only as secure as the cloud provider's security. In addition, it can often introduce redundancy (if services are already available internally) and increase costs (if not monitored properly).

Cloud Usage (SaaS)

IT managers are often unaware of how many cloud-based services are in use within their organization. Sometimes, these applications can be used to circumvent or even replace corporate infrastructure already available to users in lieu of ease of use. Unfortunately, a potential side effect of this is that your sensitive corporate information could be transferred to the cloud. Accordingly, your data could be exposed if the cloud provider's security infrastructure is breached.

The adoption of "infrastructure as a service" (IaaS) platforms is popular and can be very useful when compute resources are limited or have specialized requirements. That said, the effective outsourcing of your infrastructure must be well regulated to prevent misuse. The occasional auditing of IaaS applications can be a useful exercise not only for security purposes, but also to minimize organizational costs associated with pay per use models or recurring subscription fees.

Cloud Usage (IaaS)

No matching log data for this report

The daily report for application usage shows an unusually high number of unknown applications by category. What are two possible explanations for this? (Choose two.)

- A. Deep inspection is not being used to scan traffic.
- B. The inline-CASB application control profile does not have application categories set to Monitor
- C. Zero trust network access (ZTNA) tags are not being used to tag the correct users.
- D. Certificate inspection is not being used to scan application traffic.

Answer: A,B

NEW QUESTION # 32

Refer to the exhibits.

SECURE PRIVATE ACCESS SERVICE CONNECTION

Name	To_FortGate	X
Remote Gateway	203.221.1.1	X
Authentication Method	shared Key	Certificate
BGP Peer IP	10.11.11.1	X
Network Overlay ID	100	X

FORTINET
Secure private access network connection

Service Connections Network Configuration

SECURE PRIVATE ACCESS NETWORK CONFIGURATION

BGP Routing Design BGP per overlay BGP on local

BGP Router ID Subnet 10.12.110/24 X

Autonomous System Number (ASN) 65001 X

BGP Recursive Routing

Hub Selection Method Hub Health and Priority BGP MED

Jitter, latency and packet loss measurements are periodically obtained for each service connection via the Health Check IP.

Within each PoP, the highest priority service connection that meets minimum SLA requirements is selected. Note that a service connection can be assigned a different priority level in different PoPs.

Health Check IP 10.1.0.254 X

A FortiSASE administrator is trying to configure FortiSASE as a spoke to a FortiGate hub. The VPN tunnel does not establish. Based on the provided configuration, what configuration needs to be modified to bring the tunnel up?

- A. The hub needs IKEv2 enabled in the IPsec phase 1 settings.
- B. NAT needs to be enabled in the Spoke-to-Hub firewall policy.
- C. The BGP router ID needs to match on the hub and FortiSASE.
- D. FortiSASE spoke devices do not support mode config.

Answer: A

NEW QUESTION # 33

Which two additional components does FortiSASE use for application control to act as an inline-CASB? (Choose two.)

- A. intrusion prevention system (IPS)
- B. SSL deep inspection
- C. DNS filter
- D. Web filter with inline-CASB

Answer: A,B

NEW QUESTION # 34

Which statement describes the FortiGuard forensics analysis feature on FortiSASE?

- A. It can monitor endpoint resources in real-time.
- B. It is a 24x7x365 monitoring service of your FortiSASE environment.
- C. It can help troubleshoot user-to-application performance issues.
- D. **It can help customers identify and mitigate potential risks to their network.**

Answer: D

Explanation:

The FortiGuard forensics analysis feature on FortiSASE is designed to help customers identify and mitigate potential risks to their network. This feature provides detailed insights into suspicious activities, threats, and anomalies detected by FortiSASE. By analyzing logs, traffic patterns, and threat intelligence, FortiGuard forensics enables administrators to investigate incidents, understand their root causes, and take proactive measures to secure the network.

Here's why the other options are incorrect:

A . It can help troubleshoot user-to-application performance issues: Performance troubleshooting is typically handled by features like Digital Experience Monitoring (DEM) or application performance monitoring tools, not forensics analysis.

C . It can monitor endpoint resources in real-time: Real-time endpoint monitoring is a function of endpoint security solutions like FortiClient or FortiEDR, not FortiGuard forensics analysis.

D . It is a 24x7x365 monitoring service of your FortiSASE environment: While Fortinet offers managed services for continuous monitoring, FortiGuard forensics analysis is not a dedicated monitoring service. Instead, it focuses on post-incident investigation and risk mitigation.
