Newest C_CPI_2506 Latest Test Prep - Best Accurate Source of C_CPI_2506 Exam

The C_CPI_2506 mock tests are specially built for you to evaluate what you have studied. These SAP Certified Associate - Integration Developer (C_CPI_2506) practice exams (desktop and web-based) are customizable, which means that you can change the time and questions according to your needs. Our C_CPI_2506 Practice Tests teach you time management so you can pass the SAP Certified Associate - Integration Developer (C_CPI_2506) certification exam.

SAP Certified Associate - Integration Developer Sample Questions (Q46-Q51):

NEW QUESTION # 46

You want to send messages over an SOAP adapter to an integration flow. Which method do you use to send the messages?

- A. UPDATE
- B. PATCH
- C. GET
- **D. POST**

Answer: D

Explanation:

When sending messages to an integration flow via SOAP adapter:

The request follows standard SOAP protocol semantics.

Messages are sent using HTTP POST, since SOAP messages are enclosed in an XML envelope carried in the HTTP request body.

GET, UPDATE, PATCH are not applicable for SOAP operations.

Thus, the correct method is POST.

NEW QUESTION # 47

You want to implement a synchronous call to a remote HTTP API as an integration flow component. Which adapter can you use?

- A. Mail
- **B. OData**
- C. AMQP
- D. SFTP

Answer: B

Explanation:

You can use an OData adapter to implement a synchronous call to a remote HTTP API as an integration flow component. An OData adapter allows you to send and receive messages using the OData protocol. OData stands for Open Data Protocol and is a standard for exposing and consuming data over HTTP or HTTPS. You can use an OData adapter to communicate with OData services that support CRUD (Create, Read, Update, Delete) operations on resources. NEW QUESTION # 48

What does an API consumer do?

- A. It provides the server-side implementation of an interface.
- **B. It invokes an interface.**
- C. It provides an interface.

Answer: B

Explanation:

An API consumer is an application or system that invokes an interface provided by an API provider. An API consumer uses the interface to access or manipulate data or functionality exposed by the API provider. An API consumer can be a web browser, a mobile app, a cloud service, or any other client that can send requests and receive responses from an API provider. Reference: Integration Software | SAP Integration Suite, Modernize Integration with SAP Integration Suite | openSAP

NEW QUESTION # 49

Which of the following does SAP Graph provide?

- **A. Unified view of SAP-managed business data**
- B. Unified cache of SAP-managed business data
- C. Abstraction of business data for end users

Answer: A

Explanation:

SAP Graph provides a unified API layer that offers a business-centric, semantically harmonized view of SAP- managed data across multiple SAP solutions (e.g., S/4HANA, SuccessFactors, Ariba).

It does not cache data; instead, it provides real-time access.

It is not only an abstraction for end users, but specifically designed as a unified view for developers and applications.

Thus, the correct answer is Unified view of SAP-managed business data.

NEW QUESTION # 50

Using the Test Connectivity function, you want to test a connection to a backend system. The connection is provided by a Cloud Connector. Which parameter is required for the connection test?

- A. Host
- B. Connector ID
- C. Subaccount ID
- **D. Location ID**

Answer: D

Explanation:

To test a connection to a backend system that is provided by a Cloud Connector, you must specify the location ID as a parameter for the connection test. The location ID is a unique identifier that represents a Cloud Connector instance in a specific network location. It is used to route requests from SAP Integration Suite to the correct Cloud Connector instance and then to the backend system. You can find the location ID in the Cloud Connector administration UI under Configuration Location ID.
