## Lpi Linux Essentials Certificate Exam - version 1.6 Sample Questions (Q53-Q58):

### NEW QUESTION # 53

Which of the following permissions are set on the /tmp/directory?

- A. -----rwx
- B. rwxrws---
- C. r-xr-X--t
- **D. rwxrwxrwt**
- E. rwSrwx-rw-

**Answer: D**

Explanation:

Explanation

The correct permissions for the /tmp directory are rwxrwxrwt, which means that the owner, group, and others have read, write, and execute permissions, and that the sticky bit is set. The sticky bit is a special permission that prevents users from deleting or renaming files that they do not own in a shared directory. The /tmp directory is used for storing temporary files that may be created by different users and processes, so it needs to be accessible and writable by all, but also protected from unauthorized deletion or modification of files. The rwxrwxrwt permissions can be set by using the chmod command with either the octal mode 1777 or the symbolic mode a+trwx. References: : [File system permissions] : [Sticky bit] : [chmod]

### NEW QUESTION # 54

Which command displays file names only and no additional information?

- A. ls -nl
- **B. ls -a**
- C. ls -alh
- D. ls -l
- E. ls -lh

**Answer: B**

Explanation:

The ls command is used to list the files and directories in a given path. By default, the ls command displays only the file names, without any additional information. However, the ls command can also take various options to modify its output. For example, the -l option tells ls to display the long format, which includes the file permissions, owner, group, size, date, and name. The -h option tells ls to display the file sizes in a human-readable format, such as KB, MB, GB, etc. The -a option tells ls to display all files, including the hidden ones that start with a dot (.). The -n option tells ls to display the numeric user ID and group ID instead of the user name and group name. Therefore, the only option that does not add any additional information to the file names is the -a option. The command ls -a will display all the file names in the current directory, including the hidden ones, but nothing else. Reference:

### NEW QUESTION # 55

Running the command rm Downloads leads to the following error:

rm: cannot remove 'Downloads': Is a directory

Which of the following commands can be used instead to remove Downloads, assuming Downloads is empty? (Choose two correct answers.)

- A. rmdir Downloads
- B. rm -r Downloads
- C. rem Downloads
- D. dir -r Downloads
- E. undir Downloads

**Answer: A,B**

#### NEW QUESTION # 56

Which permissions are set on a regular file once the permissions have been modified with the command `chmod 654 file.txt`?

- A. -rwxrw---x
- B. -wxr-x--x
- C. d-wxr-x--
- D. -rw-r-xr--
- E. drw-r-xr--

**Answer: D**

Explanation:

The `chmod` command is used to change the permissions of files and directories. The permissions are represented by three sets of three characters, indicating the permissions for the owner, the group, and the others. Each character can be either r (read), w (write), x (execute), or - (no permission). The `chmod` command can use either symbolic or numeric mode to specify the permissions. In this question, the numeric mode is used, which consists of three digits from 0 to 7. Each digit is the sum of the permissions for each set, where r is 4, w is 2, and x is 1. For example, 7 means rwx, 6 means rw-, and 4 means r-. Therefore, the command `chmod 654 file.txt` sets the permissions as follows:

The first digit 6 means rw- for the owner, which means the owner can read and write the file, but not execute it.

The second digit 5 means r-x for the group, which means the group can read and execute the file, but not write it.

The third digit 4 means r-- for the others, which means the others can only read the file, but not write or execute it.

The resulting permissions are -rw-r-xr-, which is the correct answer. The other options are incorrect because they either have the wrong permissions or the wrong file type. A regular file does not have the d (directory) prefix, and a directory cannot have the - (no file type) prefix. Reference:
