So rest assured that with the CDPSE Exam Dumps you will get everything that you need to learn, prepare and pass the challenging CDPSE exam with good scores.

## ISACA Certified Data Privacy Solutions Engineer Sample Questions (Q226-Q231):

### NEW QUESTION # 226

Which of the following is the PRIMARY reason that a single cryptographic key should be used for only one purpose, such as encryption or authentication?

- A. Each process can only be supported by its own unique key management process.
- **B. It is more practical and efficient to use a single cryptographic key.**
- C. It minimizes the risk if the cryptographic key is compromised.
- D. It eliminates cryptographic key collision.

**Answer: B**

### NEW QUESTION # 227

Which party should data subject contact FIRST if they believe their personal information has been collected and used without consent?

- A. Outside privacy counsel
- B. Data protection authorities
- C. Privacy rights advocate
- **D. The organization's chief privacy officer (CPO)**

**Answer: D**

Explanation:

Explanation

The data subject should contact the organization's chief privacy officer (CPO) first if they believe their personal information has been collected and used without consent. The CPO is the senior executive who is responsible for establishing and maintaining the organization's privacy vision, strategy, and program. The CPO oversees the development and implementation of privacy policies, procedures, standards, and controls, and ensures that they align with the organization's business objectives and legal obligations. The CPO also leads the privacy governance structure, such as the privacy steering committee, and coordinates with other stakeholders, such as the data protection authorities, the privacy rights advocates, and the outside privacy counsel, to ensure that privacy is integrated into all aspects of the organization's operations. The CPO is the primary point of contact for data subjects who have any questions, complaints, or requests regarding their personal information, and who can address their concerns and resolve their issues in a timely and effective manner. ### NEW QUESTION # 228

Critical data elements should be mapped to which of the following?

- A. Privacy policy
- **B. Data process flow**
- C. Business taxonomy
- D. Business analytics

**Answer: B**

Explanation:

Explanation

Critical data elements are the data elements that are essential for the organization to achieve its business objectives, comply with legal and regulatory requirements, and protect the privacy and security of the data subjects. Critical data elements should be mapped to the data process flow, which is a graphical representation of how data is collected, processed, stored, shared, and disposed of within the organization. Mapping critical data elements to the data process flow helps to identify the sources, destinations, transformations, and dependencies of the data, as well as the potential risks and controls associated with each step of the data lifecycle.

### NEW QUESTION # 229

Which of the following is the MOST important consideration when choosing a method for data destruction?

- A. Level and strength of current data encryption
- B. Granularity of data to be destroyed
- **C. Validation and certification of data destruction**
- D. Time required for the chosen method of data destruction

**Answer: C**

Explanation:

Validation and certification of data destruction is the most important consideration when choosing a method for data destruction, because it provides evidence that the data has been destroyed beyond recovery and that the organization has complied with the applicable information security frameworks and legal requirements. Validation and certification can also help to prevent data breaches, avoid legal liabilities, and enhance the organization's reputation and trustworthiness. Different methods of data destruction may have different levels of validation and certification, depending on the type of media, the sensitivity of the data, and the standards

and guidelines followed. For example, some methods may require a third-party verification or audit, while others may generate a certificate of destruction or a report of erasure. Therefore, the organization should choose a method that can provide sufficient validation and certification for its specific needs and obligations.

### NEW QUESTION # 230

Which of the following helps define data retention time in a stream-fed data lake that includes personal data?

- A. Privacy impact assessments (PIAs)
- **B. Data privacy standards**
- C. Data lake configuration
- D. Information security assessments

**Answer: B**

Explanation:

Explanation

Data privacy standards are the set of rules, guidelines, and best practices that define the requirements and expectations for the collection, processing, storage, sharing, and disposal of personal data. Data privacy standards help to ensure that personal data is treated in a fair, lawful, transparent, and secure manner, as well as to comply with the applicable privacy laws and regulations. Data privacy standards also help to define the data retention time in a stream-fed data lake that includes personal data, as they specify the criteria and conditions for how long personal data can be kept in the data lake, based on factors such as the purpose, necessity, relevance, and quality of the data. Data retention time is an important aspect of data privacy, as it affects the risk of data breaches, unauthorized access, or misuse of personal data.
