

# Valid Mule-Dev-202 Real Test & Mule-Dev-202 Guide Torrent

Care Exam MuleSoft - MULE-DEV-202

A Mule 4 application in a parent flow that breaks up a JSON array payload into 200 separate items, then serializes each item once at a time into an Async scope to a VM queue.

A second flow in process orders has a VM Listener on the same VM queue. The rest of the flow processes each record item by writing the item to a database.

The Mule application is deployed to four CloudHub workers with persistent queues enabled.

What message processing guarantees are provided by the VM queue on the CloudHub workers, and how are VM messages routed among the CloudHub workers for each invocation of the parent flow under normal operating conditions where all the CloudHub workers remain online?

- A. EACH item VM message is processed AT MOST ONCE by ONE CloudHub worker, with workers chosen in a deterministic round robin fashion. Each of the four CloudHub workers can be expected to process 1/4 of the item VM messages (about 50 items).
- B. EACH item VM message is processed AT LEAST ONCE by ONE ARBITRARY CloudHub worker. Each of the four CloudHub workers can be expected to process some item VM messages.
- C. ALL item VM messages are processed AT LEAST ONCE by the SAME CloudHub worker where the parent flow was invoked. This one CloudHub worker processes ALL 200 item VM messages.
- D. ALL item VM messages are processed AT MOST ONCE by ONE ARBITRARY CloudHub worker. This one CloudHub worker processes ALL 200 item VM messages.

Answer: B

## Mule-Dev-202 Guide Torrent, Practice Mule-Dev-202 Mock

There are rare products which can rival with our products and enjoy the high recognition and trust by the clients like our products. Our products provide the Mule-Dev-202 study materials to clients and help they pass the test Mule-Dev-202 certification which is highly authorized and valuable. Our company is a famous company which bears the world-wide influences and our Mule-Dev-202

Study Materials are recognized as the most representative and advanced study materials among the same kinds of products. Whether the qualities and functions or the service of our product, are leading and we boost the most professional expert team domestically.

## Salesforce Certified MuleSoft Hyperautomation Developer Sample Questions (Q10-Q15):

### NEW QUESTION # 10

AnyAirlines has a MuleSoft Composer flow between NetSuite and Salesforce. One of the data elements coming from NetSuite is a string that needs to be put into a Boolean field in a Salesforce object.

Which Composer function should be used to change the datatype of the value?

- A. fromBooleanToString()
- B. substitute()
- C. fromStringToBoolean()
- D. today()

**Answer: C**

Explanation:

To convert a string from NetSuite into a Boolean field in a Salesforce object within MuleSoft Composer, you should use the `fromStringToBoolean()` function:

Function Purpose:

The `fromStringToBoolean()` function is specifically designed to convert string values to Boolean values. It interprets common Boolean strings like "true", "false", "yes", "no" and converts them into their corresponding Boolean values.

Usage:

Within MuleSoft Composer, use this function in a transformation step to ensure the data coming from NetSuite (as a string) is correctly transformed into a Boolean value before it is mapped to the Salesforce object.

Example:

If the string value from NetSuite is "true", `fromStringToBoolean("true")` will convert this to true in the Boolean field in Salesforce.

MuleSoft Composer Functions Documentation

### NEW QUESTION # 11

AnyAirlines wants to create a new marketing campaign that sends customers special offers every month based on their accrued loyalty points. There is an existing integration for customer data using MuleSoft's API-led three-tier strategy. Loyalty information exists in an external system that can be accessed via an HTTP endpoint provided by the system, but has no current integration. The external ID used will be email address.

The desired output is a CSV file containing customers that includes only the top 10 percent of loyalty point holders.

What is the most efficient way to meet this requirement?

- A. 1. Create a MuleSoft Composer flow that utilizes the current Customer integration to select all customers. 2. Create an additional MuleSoft Composer flow that retrieves all the Loyalty information. 3. Create a MuleSoft Composer flow that combines the two previous results and outputs the top 10 percent to a CSV file.
- B. 1. Have the MuleSoft team develop a new integration that includes a new System API to both the Customer and Loyalty systems. 2. Create a Process API to output the final results. 3. Create an Experience API for the business consumers to initiate the integration.
- C. 1. Have the MuleSoft team develop a new integration that includes a System API to the Loyalty system and uses the existing Customer System API. 2. Create a Process API to output the final results. 3. Create an Experience API for the business consumers to initiate the integration.
- D. 1. Create a Salesforce Flow that retrieves the Contact data. 2. Create a Salesforce Flow that retrieves the Loyalty data. 3. Create a Flow Orchestration that uses the two flows and outputs the result to a CSV file.

**Answer: C**

Explanation:

Develop System API for Loyalty System: The first step is to develop a new System API that integrates with the Loyalty system. This API will handle communication with the external system via the provided HTTP endpoint.

Reference: MuleSoft API-led Connectivity

Utilize Existing Customer System API: Use the existing System API for customer data to retrieve necessary customer information.

Combining these APIs ensures a modular approach and reuse of existing assets.

Reference:API-led Connectivity

Create Process API:Develop a Process API that combines data from both the Customer and Loyalty System APIs. This API will process the data, apply business logic to filter the top 10 percent of loyalty point holders, and format the results.

Reference:Designing Process APIs

Create Experience API:Develop an Experience API to serve the business consumers. This API will provide a user-friendly interface for initiating the integration and retrieving the results as a CSV file.

Reference:API Experience Layer

## NEW QUESTION # 12

AnyAirlines has an RPA process that is failing in Production.

According to best practices, how should they debug the failure?

- A. Download the analysis package from RPA Manager. revert the RPA process to the Test phase, then import the analysispackage to RPA Builder and debug.
- B. Download the analysis package from RPA Manager, open it in a text editor, then determine the root cause.
- C. Deactivate the RPA process, enter the inputs manually, the monitor the execution to determine the root cause.
- **D. Download theanalysis package from RPA Manager. revert the RPA process to the Build phase,then import the analysis package to RPA Builder and debug.**

**Answer: D**

Explanation:

Download the Analysis Package:The first step is to download the analysis package from the RPA Manager.

This package contains logs and detailed execution data that are crucial for debugging.

Reference:MuleSoft RPA Manager Documentation

Revert to Build Phase:Reverting the RPA process to the Build phase allows developers to make changes and debug the process.

The Build phase is where the RPA process is designed and configured.

Reference:MuleSoft RPA Lifecycle

Import to RPA Builder:Import the analysis package into RPA Builder, which is the tool used to develop and debug RPA processes.

This allows for a detailed investigation and identification of the root cause of the failure.

Reference:MuleSoft RPA Builder Guide

Debugging:Use the detailed logs and execution data within RPA Builder to step through the process, identify issues, and implement fixes. This is the most effective method for diagnosing and resolving issues in RPA processes.

Reference:RPA Debugging Techniques

## NEW QUESTION # 13

Which component of Anypoint Platform is responsible for enforcing API policies?

- A. API Analytics
- **B. API Gateway**
- C. API Manager
- D. API Runtime

**Answer: B**

Explanation:

The component of Anypoint Platform responsible for enforcing API policies is the API Gateway.

API Gateway:

The API Gateway is a runtime component that enforces policies applied to APIs. It acts as an intermediary that manages API traffic, security, and performance by applying the policies configured in API Manager.

Policies such as rate limiting, security, transformation, and monitoring are enforced at the API Gateway to ensure that APIs are accessed securely and efficiently.

Anypoint Platform API Gateway Documentation

## NEW QUESTION # 14

Northern Trail Outfitters (NTO) wants to automate a multi-step process that spans several departments. How do Interactive Steps in Flow Orchestration help NTO involve users at key steps of the process?

- A. They leverage AI processing to automatically interact with the customer and collect customer data.
- B. They enable users to collaborate on specific work items.
- C. They allow the user to interact directly with external systems through the Salesforce UI.
- **D. They allow the user to interact with the process in between automated backend steps.**

**Answer: D**

Explanation:

Interactive Steps in Flow Orchestration are designed to involve users at specific points within an automated process. Here's how they help NTO:

User Interaction:

Interactive Steps enable users to engage with the process during key stages. These steps are inserted between automated tasks to require human input or decision-making.

This ensures that critical user actions, such as approvals or data entry, are seamlessly integrated into the flow.

Process Continuity:

Once the user completes the required interaction, the process can automatically proceed to the next step. This creates a cohesive workflow that combines automated and manual tasks efficiently.

Use Case Examples:

Approving a document, entering additional information, or making decisions based on presented data are typical scenarios where Interactive Steps are beneficial.
