PECB ISO-IEC-42001-Lead-Auditor試験の準備方法 | ハイパスレートのISO-IEC-42001-Lead-Auditor最新対策問題試験 | ユニークなISO/IEC 42001:2023 Artificial Intelligence Management System Lead Auditor Exam日本語試験情報

Pass4TestのPECBのISO-IEC-42001-Lead-Auditor試験トレーニング資料はあなたに時間とエネルギーを節約させます。あなたが何ヶ月でやる必要があることを我々はやってさしあげましたから。あなたがすべきことは、Pass4TestのPECBのISO-IEC-42001-Lead-Auditor試験トレーニング資料に受かるのです。あなた自身のために、証明書をお願いします。Pass4Testはあなたに必要とした知識と経験を提供して、PECBのISO-IEC-42001-Lead-Auditor試験の目標を作ってあげました。Pass4Testを利用したら、試験に合格しないことは絶対ないです。

PECB ISO/IEC 42001:2023 Artificial Intelligence Management System Lead Auditor Exam 認定 ISO-IEC-42001-Lead-Auditor 試験問題 (Q88-Q93):

質問 # 88

Was the arrangement for assigning guides during the audit process appropriate?

- A. No, because every auditor must have a guide accompanying them
- B. No, because guides must be independent of the auditee
- C. No, because the auditee should not influence the guide selection process
- **D. Yes, the arrangement was appropriate**

正解: D

解説:

According to ISO 19011:2018, Clause 6.4.2, guides may be appointed by the auditee to assist the audit team in identifying individuals to be interviewed, providing access to sites, and ensuring communication. Not every auditor must have an individual guide, and the decision is typically made collaboratively between the audit team leader and the auditee based on the audit scope, complexity, and logistics.

The scenario describes that the decision was made in mutual agreement with the audit team leader, which complies with best practices.

Reference:

ISO 19011:2018, Clause 6.4.2 - Use of guides and observers

ISO/IEC 17021-1:2015, Clause 9.1.6 - Audit support from guides

PECB ISO/IEC 42001 Lead Auditor Study Guide - Section: Role of Guides in Audits

質問 # 89

Did Samuel consider all the necessary factors while reviewing documented information during the stage 1 audit? Refer to Scenario 6. Scenario 6: AfrinovAI, based in Nairobi, Kenya, develops AI tools to improve agriculture in Africa. The company uses AI to address challenges faced by African farmers, offering tools for analyzing satellite images to monitor crop health, predicting pest and disease outbreaks, and automating irrigation to use water more efficiently.

AfrinovAI has implemented an artificial intelligence management system AIMS based on ISO/IEC 42001, reflecting its commitment to ethical and effective management practices in its AI solutions.

AfrinovAI is undergoing a certification audit to obtain certification against ISO/IEC 42001. Samuel, an expert in AI technologies and management systems, is heading the audit team. Before initiating the audit process, Samuel reviewed and approved the audit plan, which served as a basis for the agreement between the certification body and the auditee.

During the stage 1 audit, the audit team focused on a detailed evaluation of AfrinovAI's documented information, critically assessing both their format and content.

Samuel held a meeting with his team to prepare for the stage 2 audit. During this meeting, responsibilities were allocated among team members, assigning specific processes, functions, sites, areas, or activities based on each auditor's expertise and the audit requirements. He also assigned auditing roles to technical experts to leverage their specialized knowledge in specific areas.

In the stage 2 audit, Samuel and his team held an opening meeting during which Samuel explained how the audit activities will be undertaken. AfrinovAI's also participated in the meeting. Afterward, the audit team conducted on-site activities to closely inspect the physical locations of the audited processes. The interviewed individuals from the auditee's personnel regarding the AIMS and observed some of the operations of the auditee. They also used sampling and technical verification to assess the implementation of AI-related controls, verify compliance with established procedures, and identify any gaps in adherence to the AIMS requirements.

They skipped the review of documented information related to the AIMS since some documents had already been reviewed during the stage 1 audit. This comprehensive approach ensured a thorough evaluation of AfrinovAI's AIMS against the ISO/IEC 42001.

- A. Yes, documented information must be validated based on two criteria, i.e., content and format
- B. No, Samuel should only check if documented information has been stored in the appropriate media
- **C. No, Samuel should also ensure that there is a process in place for reviewing and approving documented information for suitability and adequacy**

- D. Yes, if the information is archived in a secure system

正解: C

解説:

According to ISO/IEC 42001:2023 (Clause 7.5), an organization must establish processes for creating, reviewing, updating, and approving documented information to ensure its adequacy and suitability.

While format and content are important, the auditor must also assess whether there are established procedures for control of documentation - including version control, approval mechanisms, and traceability.

Samuel's review during Stage 1 would be incomplete if it did not assess this broader requirement.

ISO 19011:2018, Clause 6.3.4 - Review of documentation

PECB ISO/IEC 42001 Lead Auditor Study Guide - Documented Information Evaluation

質問 # 90

An audit team member is tasked with evaluating a sophisticated AI system used for autonomous driving. They lack the necessary expertise but proceed without consulting a specialist. Which principle is being neglected in this scenario?

- A. Due Professional Care
- B. Independence
- C. Integrity
- D. Confidentiality

正解: A

解説:

The principle being neglected is Due Professional Care.

According to ISO 19011:2018 - Clause 4(f), auditors are expected to apply diligence, competence, and judgment during audit activities. If an auditor proceeds with an audit without the required expertise, especially for a high-risk system like autonomous driving, this violates the principle of due care.

The PECB Lead Auditor Guide - Domain 3 clearly states that in complex technical environments (such as AI or autonomous systems), auditors must seek assistance from domain specialists when they lack direct experience.

質問 # 91

During an audit, the auditor uncovers sensitive data regarding the AI system's algorithms and their decision-making processes. Which principle must the auditor adhere to when handling this information?

- A. Fair Presentation
- B. Evidence-Based Approach
- C. Integrity
- D. Confidentiality

正解: D

解説:

The correct principle is Confidentiality.

ISO 19011:2018 - Clause 4(e) states that auditors must respect the confidentiality of information acquired during the audit and use it only for audit purposes. This includes sensitive or proprietary data, such as AI algorithms, models, and proprietary decision logic.

The PECB Lead Auditor Guide - Domain 3 reinforces that any internal or sensitive company information discovered must be safeguarded and never disclosed without authorization.

Reference: ISO 19011:2018 - Clause 4(e): "Confidentiality - Security of information" PECB Lead Auditor Guide - Domain 3: "Auditor Conduct and Ethics - Confidentiality Requirements"

質問 # 92

Scenario 5:

Scenario 5: Aizoia, located in Washington, DC, has revolutionized data analytics, software development, and consulting by using advanced AI algorithms. Central to its success is an AI platform adept at deciphering complex datasets for enhanced insights.

To ensure that its AI systems operate effectively and responsibly, Aizoia has established an artificial intelligence management system AIMS based on ISO/IEC 42001 and is now undergoing a certification audit to verify the AIMS's effectiveness and compliance with ISO/IEC 42001.

Robert, one of the certification body's full-time employees with extensive experience in auditing, was appointed as the audit team leader despite not receiving an official offer for the role. Understanding the critical importance of assembling an audit team with diverse skills and knowledge, the certification body selected competent individuals to form the audit team. The certification body appointed a team of seven members to conduct the audit after considering the specific conditions of the audit mission and the required competencies.

Initially, the certification body, in cooperation with Aizoia, defined the extent and boundaries of the audit, specifying the sites (whether physical or virtual), organizational units, and the activities for review. Once the scope, processes, methods, and team composition had been defined, the certification body provided the audit team leader with extensive information, including the audit objectives and documented details on the scope, processes, methods, and team compositions.

Additionally, the certification body shared contact details of the auditee, including locations, time frames, and the duration of the audit activities to be conducted. The team leader also received information needed for evaluating and addressing identified risks and opportunities for the achievement of the audit objectives.

Before starting the audit, Robert wrote an engagement letter, introducing himself to Aizoia and outlining plans for scheduling initial contact. The initial contact aimed to confirm the communication channels, establish the audit team's authority to conduct the audit, and summarize the audit's key aspects, such as objectives, scope, criteria, methods, and team composition. During this first meeting, Robert emphasized the need for access to essential information that would help to conduct the audit.

Moreover, audit logistics, such as scheduling, access, health and safety arrangements, observer attendance, and the need for guides or interpreters, were thoroughly planned. The meeting also addressed areas of interest or concern, preemptively resolving potential issues and finalizing any matters related to the audit team composition.

As the audit progressed, Robert recognized the complexity of Aizoia's operations, leading him to conclude that a review of its AI-related data governance practices was essential for compliance with ISO/IEC 42001. He discussed this need with Aizoia's management, proposing an expanded audit scope. After careful consideration, they agreed to conduct a thorough review of the AI data governance practices, but there was no mutual decision to officially change the audit scope. Consequently, Robert decided to proceed with the audit based on the original scope, adhering to the initial audit plan, and documented the conversation and decision accordingly.

Based on the scenario above, answer the following question:

Question:

Robert did not receive an offer from the certification body prior to accepting the mandate. Is this acceptable?

- A. Yes, if the auditor has extensive experience, a formal offer is not necessary
- **B. No, the audit team leader must receive an official offer before accepting the audit mandate**
- C. Yes, since Robert is a full-time employee of the certification body, he may accept audit mandates without receiving a formal offer

正解: B

解説:

The audit team leader must receive a formal appointment before accepting the audit responsibility.

* ISO/IEC 17021-1:2015 Clause 9.2.3.1 requires that the audit team leader must be formally appointed by the certification body to ensure clarity and avoid conflicts.

* The Lead Auditor Guide states: "Formal acceptance of an audit assignment is critical to ensure that audit roles, responsibilities, and impartiality expectations are clearly communicated." Reference: ISO/IEC 17021-1:2015 Clause 9.2.3.1; ISO/IEC 42001 Lead Auditor Manual Section 5 ("Audit Team Leader Requirements").
