

Of course, when we review a qualifying exam, we can't be closed-door. We should pay attention to the new policies and information related to the test NSK300 certification. For the convenience of the users, the NSK300 test materials will be updated on the homepage and timely update the information related to the qualification examination. As a result, the NSK300 Test Prep can help users to spend the least time, know the test information directly, let users save time and used their time in learning the new hot spot concerning about the knowledge content.

## SK300 Study Materials & Notes

NSK300 Exam Prep &amp; NSK300 Study Materials &amp; NSK300 Actual Test

Our NSK300 study materials will be very useful for all people to improve their learning efficiency. If you do all things with efficient, you will have a promotion easily. If you want to spend less time on preparing for your NSK300 exam, if you want to pass your NSK300 exam and get the certification in a short time, our NSK300 Study Materials will be your best choice to help you achieve your dream. Only studying with our NSK300 exam questions for 20 to 30 hours, you will be able to pass the NSK300 exam with confidence.

## Netskope NSK300 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>Netskope Platform Troubleshooting: This section of the exam measures the skills of Support Engineers and focuses on identifying and resolving common issues within the Netskope platform. It includes troubleshooting client connectivity problems, analyzing steering methods, resolving general connectivity concerns, and addressing SAML integration issues. The section ensures candidates can diagnose and fix issues that impact platform performance and user access.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>Netskope Platform Monitoring: This section of the exam measures the capabilities of Security Operations Center (SOC) Analysts and focuses on monitoring the platform through reporting and analytics tools. It highlights how Netskope insights support visibility into user activity, cloud app behavior, and policy effectiveness to help organizations maintain a continuous cloud security posture.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>Cloud Security Solutions: This section of the exam measures the skills of Cloud Security Analysts and covers the core components and functions of the Netskope Security Cloud Platform. It includes understanding how the platform integrates with enterprise environments, the deployment methods supported by Netskope, and the role of various microservices in delivering cloud-based security. The focus is on ensuring candidates can recognize how Netskope's architecture protects users, applications, and data across cloud services.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>Netskope Platform Implementation: This section of the exam measures the abilities of Cloud Security Engineers and focuses on implementing the Netskope Security Cloud Platform using recommended steering architectures and deployment approaches. It includes key concepts such as API-enabled protection and real-time protection features, ensuring candidates understand how to deploy Netskope to secure cloud usage effectively within enterprise networks.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>Netskope Platform Management: This section of the exam measures the skills of Security Administrators and covers essential administrative tasks required to manage the Netskope Security Cloud Platform. It includes managing DLP functions, handling identity integrations, and monitoring Netskope components to maintain platform stability. The domain ensures professionals can manage daily operations and maintain strong access, data, and security controls.</li> </ul>

## Netskope Certified Cloud Security Architect Sample Questions (Q34-Q39):

### NEW QUESTION # 34

You are building an architecture plan to roll out Netskope for on-premises devices. You determine that tunnels are the best way to achieve this task due to a lack of support for explicit proxy in some instances and IPsec is the right type of tunnel to achieve the desired security and steering.

What are three valid elements that you must consider when using IPsec tunnels in this scenario? (Choose three.)

- A. Netskope Client behavior when on-premises
- B. the categories to be blocked
- C. bandwidth considerations
- D. the impact of threat scanning performance
- E. cipher support on tunnel-initiating devices

**Answer: C,D,E**

Explanation:

When using IPsec tunnels, especially in the context of deploying Netskope for on-premises devices, several factors must be considered to ensure a secure and efficient architecture:

Cipher support on tunnel-initiating devices (A): It is crucial to ensure that the devices initiating the IPsec tunnels support the ciphers used by Netskope. This compatibility is necessary for establishing secure connections.

Bandwidth considerations (B): The bandwidth available for the IPsec tunnels will affect the data throughput and performance of the connection. Adequate bandwidth must be allocated to handle the expected traffic without causing bottlenecks.

The impact of threat scanning performance (D): The performance of threat scanning can be affected by the encryption and decryption processes in IPsec tunnels. It is important to consider how the threat scanning capabilities will perform under the additional load of encrypted traffic.

These elements are essential for the successful implementation of IPsec tunnels in a Netskope architecture plan for on-premises devices<sup>12</sup>.

#### NEW QUESTION # 35

You are attempting to merge two Advanced Analytics reports with DLP incidents: Report A with 3000 rows and Report B with 6000 rows. Once merged, you notice that the merged report is missing a significant number of rows. What is causing this behavior?

- A. Missing data is due to viewing limits.
- B. Filters are applied differently to dimensions and measures
- C. Netskope automatically deduplicates data in merged reports.
- D. Visualizations have a system limit of 5000 rows.

**Answer: A**

Explanation:

When merging two Advanced Analytics reports in Netskope, if the merged report is missing rows, it is likely due to viewing limits within the system. Netskope's Advanced Analytics platform has limitations on the number of rows that can be viewed at once, which can result in missing data when dealing with large reports. This viewing limit ensures performance and manageability of the data within the system.

#### NEW QUESTION # 36

Review the exhibit.

□ You are attempting to block uploads of password-protected files. You have created the file profile shown in the exhibit. Where should you add this profile to use in a Real-time Protection policy?

- A. Add the profile to a Malware Detection profile that is used in a Real-time Protection policy.
- B. Add the profile to a DLP profile that is used in a Real-time Protection policy.
- C. Add the profile to a Constraint profile that is used in a Real-time Protection policy.
- D. Add the profile directly to a Real-time Protection policy as a Constraint.

**Answer: B**

Explanation:

In Netskope Cloud Security, to block uploads of password-protected files, you should add the file profile to a DLP (Data Loss Prevention) profile that is used in a Real-time Protection policy. The DLP profiles in Netskope are designed to detect and protect sensitive data in real-time and at rest across the cloud environment. This approach ensures that any file matching the criteria set in the file profile, such as being password-protected, will trigger the DLP rules and prevent the upload action in real-time.

#### NEW QUESTION # 37

You deployed the Netskope Client for Web steering in a large enterprise with dynamic steering. The steering configuration includes a bypass rule for an application that is IP restricted. What is the source IP for traffic to this application when the user is on-premises at the enterprise?

- A. Netskope data plane gateway IPv4
- B. Loopback IPv4
- C. Enterprise Egress IPv4
- D. DHCP assigned RFC1918 IPv4

**Answer: C**

\* When a user is on-premises at the enterprise and accesses an application that is IP restricted, the source IP for traffic to this application is the Enterprise Egress IPv4 address.

\* The Enterprise Egress IP represents the external IP address of the enterprise network as seen by external services or applications.

\* This IP address is used for communication between the user's device and external resources, including applications that are IP restricted. References:

\* The answer is based on general knowledge of networking concepts and how IP addresses are used in enterprise environments.

### NEW QUESTION # 38

You are asked to create a Real-time Protection policy to inspect outbound e-mail for DLP violations. You must prevent sensitive e-mail from leaving the corporate mail relay.

In this scenario, which Real-time Protection policy action must be specified?

- A. Forward to Proxy
- B. Block
- C. Alert
- D. Add SMTP Header

**Answer: D**

### NEW QUESTION # 39
