P.S. Free & New 1Z0-1072-25 dumps are available on Google Drive shared by BraindumpsVCE: [https://drive.google.com/open?id=1Li\\_inZiDMCQmlbmBi68yI2EH97W6CHiP](https://drive.google.com/open?id=1Li_inZiDMCQmlbmBi68yI2EH97W6CHiP)

BraindumpsVCE is working on providing most helpful the real test questions answer in certification exams many years especially for 1Z0-1072-25. It provide 100% real test exam materials to help you clear exam surely. If you find some mistakes in other sites, you will know how the important the site have certain power. Choosing good Oracle 1Z0-1072-25 Exam Materials, we will be your only option.

One of the best ways to prepare for the Oracle 1Z0-1072-25 exam is to study the Oracle Cloud Infrastructure 2025 Architect Associate (1Z0-1072-25) exam questions. Familiarizing yourself with the 1Z0-1072-25 certification using practice test on real-world data sets can help you build your confidence and prepare you for the exam. Additionally, taking 1Z0-1072-25 Exam Questions and quizzes can help you identify areas where you need to improve and gauge your understanding of the material.

**2026 Accurate Oracle 1Z0-1072-25 Passed**

With the rapid development of the economy, the demands of society on us are getting higher and higher. If you can have 1Z0-1072-25 certification, then you will be more competitive in society. We have chosen a large number of professionals to make 1Z0-1072-25 learning question more professional, while allowing our study materials to keep up with the times. Of course, we do it all for you to get the information you want, and you can make faster progress. You can also get help from 1Z0-1072-25 Exam Training professionals at any time when you encounter any problems. We can be sure that with the professional help of our 1Z0-1072-25 test guide you will surely get a very good experience. Good materials and methods can help you to do more with less. Choose 1Z0-1072-25 test guide to get you closer to success.

## Oracle 1Z0-1072-25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>Identity and Access Management (IAM): This domain validates skills of security architects implementing granular access controls, emphasizing IAM policy creation, compartment organization, and dynamic group configuration. It covers identity domain management, network source restrictions, and tag-based access mechanisms to enforce least-privilege principles across OCI resources</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>Storage: Designed for storage administrators managing enterprise data solutions, this section tests proficiency in deploying Block</li> <li>File</li> <li>Object Storage with lifecycle management, cross-region replication, and tiered storage strategies. It includes configuring volume groups, snapshots, versioning, and security controls while analyzing storage performance metrics and cost optimization techniques.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>Networking: Targeting network architects designing secure cloud architectures, this domain focuses on Virtual Cloud Network (VCN) implementation, including subnet design, IP address management, and routing through gateways (NAT, service, internet). It assesses expertise in VPN</li> <li>FastConnect deployment, DNS configuration, load balancer setup, and advanced tools like Network Path Analyzer for troubleshooting latency or connectivity issues.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>Compute: This section measures skills of cloud architects responsible for designing scalable and resilient infrastructure, covering compute instance configuration, autoscaling policies, and OS management. It evaluates understanding of OCI compute image options, infrastructure maintenance processes, and strategies for optimizing instance performance across availability domains.</li> </ul>

## Oracle Cloud Infrastructure 2025 Architect Associate Sample Questions (Q35-Q40):

### NEW QUESTION # 35

Which Oracle Cloud Infrastructure (OCI) Identity and Access Management (IAM) policy is invalid?

- A. Allow group 'Default/'A-Admins' to manage all-resources in compartment Project-A
- B. Allow group 'Default/'A-Developers' to create volumes in compartment Project-A
- C. Allow any-user to inspect users in tenancy
- D. Allow dynamic-group 'Default/'FrontEnd' to manage instance-family in compartment Project-A

**Answer: C**

Explanation:

In Oracle Cloud Infrastructure (OCI), Identity and Access Management (IAM) policies are used to control access to resources. The policy in option C is invalid because "any-user" is not a valid principal in OCI IAM policies. OCI policies can only grant permissions to groups or dynamic groups, but not to arbitrary users.

Here's an explanation for each option:

A . Allow dynamic-group 'Default/'FrontEnd' to manage instance-family in compartment Project-A: This is valid. It grants the dynamic group 'FrontEnd' the ability to manage instances within the Project-A compartment.

B . Allow group 'Default/'A-Admins' to manage all-resources in compartment Project-A: This is valid. It provides full administrative access to all resources in the Project-A compartment for the 'A-Admins' group.

C . Allow any-user to inspect users in tenancy: This is invalid because OCI does not allow the use of "any-user" in policies. You

must specify a valid group or dynamic group to define permissions.

D. Allow group 'Default'/A-Developers' to create volumes in compartment Project-A: This is valid. It permits the 'A-Developers' group to create volumes in the Project-A compartment.

### NEW QUESTION # 36

By default, OCI IAM policies follow the principle of least privilege. What does this principle mean in the context of policy creation?

- A. Policies should grant all possible permissions to simplify access control.
- B. Policies should be written in a complex and technical manner to enhance security.
- C. Policies should provide only the minimum set of permissions required for users to perform their tasks effectively.
- D. Policies should be identical for all users within a tenancy.

**Answer: C**

Explanation:

The principle of least privilege is a security best practice that dictates that users should only be granted the minimum set of permissions necessary to perform their tasks. This principle helps to minimize the risk of accidental or malicious actions that could compromise security.

IAM Policies in OCI: When creating IAM policies in OCI, you should carefully evaluate the required permissions and only grant those that are absolutely necessary for the users or groups to perform their specific roles. This helps to reduce the attack surface and prevent unauthorized access to sensitive resources.

### NEW QUESTION # 37

Which authentication option should you use to ensure third-party APIs communicate with OCI resources?

- A. Auth Tokens
- B. SSH Key Pair with 2048-bit algorithm
- C. API Signing Key
- D. OCI Username and Password

**Answer: C**

Explanation:

When ensuring that third-party APIs communicate securely with OCI resources, the appropriate authentication option is API Signing Key.

API Signing Key: This method uses an RSA key pair to authenticate and sign API requests. The API signing key provides a secure and reliable way to ensure that the API requests to OCI are coming from an authorized source. It is commonly used for programmatic access to OCI services.

Other Options:

SSH Key Pair: Primarily used for secure shell access to compute instances, not for API authentication.

Auth Tokens: Typically used for authentication in environments where APIs don't support the API Signing Key, such as OCI CLI or SDKs.

OCI Username and Password: Generally used for the Console login, not for securing API communications.

Relevant OCI Documentation:

API Signing Key Authentication

This documentation provides details on using API Signing Keys for secure API communication in OCI.

### NEW QUESTION # 38

Which TWO are key benefits of setting up Site-to-Site VPN on Oracle Cloud Infrastructure (OCI)?

- A. When setting up Site-to-Site VPN, customers can configure it to use static or dynamic routing (BGP).
- B. When setting up Site-to-Site VPN, it creates a private connection that provides consistent network experience.
- C. When setting up Site-to-Site VPN, OCI provisions redundant VPN tunnels.

- D. When setting up Site-to-Site VPN, customers can expect bandwidth above 2 Gbps.

**Answer: A,C**

Explanation:

Setting up a Site-to-Site VPN on Oracle Cloud Infrastructure offers several key benefits related to connectivity and reliability:  
 Static or Dynamic Routing (BGP): OCI allows customers to configure Site-to-Site VPN with either static routing or dynamic routing using Border Gateway Protocol (BGP). This flexibility enables customers to choose the routing method that best suits their network configuration and requirements.

Redundant VPN Tunnels: OCI automatically provisions redundant VPN tunnels when you set up a Site-to-Site VPN. These redundant tunnels ensure high availability and fault tolerance, so if one tunnel fails, traffic can continue to flow through the other tunnel without interruption.

Bandwidth Considerations: While the VPN provides a reliable connection, it typically does not exceed 2 Gbps in bandwidth. Higher bandwidth connections usually require FastConnect.

Private Connection: The VPN does create a secure and private connection between on-premises data centers and OCI, but it does not inherently provide a consistent network experience in the way that a dedicated connection like FastConnect does.

### NEW QUESTION # 39

Why is the OCI Inter-Region Latency dashboard useful for optimizing data transfer and backup strategies?

- A. It's designed for troubleshooting latency issues within your specific applications.
- B. It provides real-time data specific to your tenancy's workloads.
- C. It focuses solely on latency within your own tenancy.
- D. It offers a current and historical view of latency snapshots.

**Answer: D**

Explanation:

The OCI Inter-Region Latency dashboard is useful for optimizing data transfer and backup strategies because it provides both current and historical views of latency snapshots between OCI regions. This information helps you understand the network performance between regions over time, allowing you to optimize the placement of resources and data transfer operations.

Optimization Use: By analyzing latency data, you can make informed decisions on where to store backups and how to efficiently transfer data across regions, potentially reducing costs and improving performance.
