order to pass Salesforce Data-Architect Certification with a good score.

## Salesforce Certified Data Architect Sample Questions (Q25-Q30):

### NEW QUESTION # 25

DreamHouse Realty has a data model as shown in the image. The Project object has a private sharing model, and it has Roll-Up summary fields to calculate the number of resources assigned to the project, total hours for the project, and the number of work items associated to the project.

There will be a large amount of time entry records to be loaded regularly from an external system into Salesforce.

What should the Architect consider in this situation?

- A. Calculate summary values instead of Roll-Up by using workflow.
- B. Calculate summary values instead of Roll-Up by using triggers.
- C. Load all data using external IDs to link to parent records.
- **D. Load all data after deferring sharing calculations.**

**Answer: D**

Explanation:

According to the exam guide, one of the objectives is to "describe the use cases and considerations for deferring sharing calculations"<sup>1</sup>. This implies that option A is the correct way to load large amounts of data into Salesforce without affecting performance and data integrity. Deferring sharing calculations allows the data to be loaded first and then the sharing rules to be applied later<sup>2</sup>. Option B is not correct because workflows are not recommended for calculating summary values, as they can cause performance issues and data skew<sup>3</sup>. Option C is not correct because triggers are also not recommended for calculating summary values, as they can cause governor limit errors and data inconsistency. Option D is not correct because external IDs are used to link records from different systems, not to improve data loading performance.

### NEW QUESTION # 26

Universal Containers is integrating a new Opportunity engagement system with Salesforce. According to their Master Data Management strategy, Salesforce is the system of record for Account, Contact, and Opportunity data. However, there does seem to be valuable Opportunity data in the new system that potentially conflicts with what is stored in Salesforce. What is the recommended course of action to appropriately integrate this new system?

- A. The MDM strategy defines Salesforce as the system of record, so Salesforce Opportunity values prevail in all conflicts.
- B. A policy should be adopted so that the system whose record was most recently updated should prevail in conflicts.
- C. The Opportunity engagement system should become the system of record for Opportunity records.
- **D. Stakeholders should be brought together to discuss the appropriate data strategy moving forward.**

**Answer: D**

### NEW QUESTION # 27

UC is implementing sales cloud for patient management and would like to encrypt sensitive patient records being stored in files. Which solution should a data architect recommend to solve this requirement?

- A. Implement 3rd party App Exchange app to encrypt files.
- **B. Implement shield platform encryption to encrypt files.**
- C. Store files outside of salesforce and access them to real time.
- D. Use classic encryption to encrypt files.

**Answer: B**

### NEW QUESTION # 28

Cloud Kicks needs to purge detailed transactional records from Salesforce. The data should be aggregated at a summary level and available in Salesforce.

What are two automated approaches to fulfill this goal? (Choose two.)

- **A. Schedulable Batch Apex**
- **B. Third-party Integration Tool (ETL)**
- C. Third-party Business Intelligence system
- D. Apex Triggers

**Answer: A,B**

### NEW QUESTION # 29

A health care provider wishes to use salesforce to track patient care. The following actions are in Salesforce

1. Payment Providers: Orgas who pay for the care 2 patients.
2. Doctors: They provide care plan for patients and need to support multiple patients, they are provided access to patient information.
3. Patients: They are individuals who need care.

A data architect needs to map the actor to Sf objects. What should be the optimal selection by the data architect?

- A. Patients as Contacts, Payment providers as Accounts, & Doctors as Accounts
- **B. Patients as Person Accounts, Payment providers as Accounts, & Doctors as Person Account**
- C. Patients as Accounts, Payment providers as Accounts, & Doctors as Person Accounts
- D. Patients as Person Accounts, Payment providers as Accounts, & Doctors as Contacts

**Answer: B**

Explanation:

Patients as Person Accounts, Payment providers as Accounts, & Doctors as Person Accounts is the optimal selection by the data architect to map the actor to Salesforce objects. This is because Person Accounts are a special type of accounts that can store both business and personal information for individual customers.

Payment providers are organizations that pay for the care of patients, so they can be modeled as Accounts.

Doctors are also individuals who provide care plans for patients and need access to patient information, so they can also be modeled as Person Accounts.

### NEW QUESTION # 30

.....
