

Eminent 1z0-1104-25 Training Materials: Oracle Cloud Infrastructure 2025 Security Professional exhibit the most accurate Exam Questions - Free4Dump

P.S. Free & New 1z0-1104-25 dumps are available on Google Drive shared by Free4Dump: <https://drive.google.com/open?id=1hWSXnO7EX0XNAlokzv6DzIbM4PvEM-AT>

Believe that users will get the most satisfactory answer after consultation on our 1z0-1104-25 exam questions. Our online service staff is professionally trained, and users' needs about 1z0-1104-25 test guide can be clearly understood by them. The most complete online service of our company will be answered by you, whether it is before the purchase of 1z0-1104-25 training guide or the installation process, or after using the 1z0-1104-25 latest questions, no matter what problem the user has encountered. We will give you the best service and suggestion on the 1z0-1104-25 study material.

Oracle 1z0-1104-25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Detecting, Remediating, and Monitoring OCI Resources: This section of the exam measures the skills of OCI Administrators and emphasizes monitoring and maintaining security posture across cloud resources. It focuses on the use of Cloud Guard, security zones, and the Security Advisor. Candidates also need to understand how to identify rogue users with threat intelligence, as well as use monitoring, logging, and event services for continuous visibility into performance and security.
Topic 2	<ul style="list-style-type: none">• Protecting Infrastructure - Network and Applications: This section of the exam measures the skills of Cloud Security Professionals and covers methods for securing networks and applications on OCI. Topics include network security groups, firewalls, and security lists, while also focusing on the use of load balancers for availability. The section further addresses the configuration of OCI certificates and web application firewalls to strengthen infrastructure security.
Topic 3	<ul style="list-style-type: none">• Implementing Identity and Access Management (IAM): This section of the exam measures skills of OCI Administrators and focuses on identity and access controls. It covers IAM domains, users, groups, and compartments, as well as the use of IAM policies to manage access to resources. Candidates are also tested on configuring dynamic groups, network sources, and tag-based access control, along with managing MFA, sign-on policies, and activity monitoring.

Topic 4	<ul style="list-style-type: none"> OCI Security Introduction: This section of the exam measures the skills of Cloud Security Professionals and covers the basics of security in Oracle Cloud Infrastructure. It introduces the shared security responsibility model, the core principles of security design, and the use of foundational security services to secure deployments on OCI.

Braindump 1z0-1104-25 Pdf, Updated 1z0-1104-25 Demo

If you obtain a golden 1z0-1104-25 certificate, you should have more opportunities for new jobs or promotions. That's why large quantity of candidates spend much time or money on 1z0-1104-25 qualification exams even most exams are expensive and have low pass rate. So our reliable 1z0-1104-25 Guide Torrent will be the savior for you if you are headache about your exam. Our valid 1z0-1104-25 test torrent materials have 99% pass rate. Sometimes choice is as important as effort. Success always belongs to a person who has the preparation.

Oracle Cloud Infrastructure 2025 Security Professional Sample Questions (Q33-Q38):

NEW QUESTION # 33

Task 6: Create Load Balancer and Attach Certificate

Create a Load Balancer with the name PBT-CERT-LB-01 in subnet LB-Subnet-PBT-CERT-SNET-02 Create a Listener for the load balancer, where:

Name: PBT-CERT-LB_LTSN_01

Protocol: HTTPS

Port: 443

Attach the certificate PBT-CERT-01-`<username>` to the load balancer

Attach the security list PBT-CERT-LB-SL-01 to subnet LB-Subnet-PBT-CERT-SNET-02 See the solution below in Explanation.

Answer:

Explanation:

Task 6: Create Load Balancer and Attach Certificate

Step 1: Create the Load Balancer

- * Log in to the OCI Console.
- * Navigate to Networking > Load Balancers.
- * Click Create Load Balancer.
- * Enter the following details:
- * Name: PBT-CERT-LB-01
- * Compartment: Select your assigned compartment.
- * Load Balancer Type: Select Public.
- * Virtual Cloud Network: Select PBT-CERT-VCN-01.
- * Subnet: Select LB-Subnet-PBT-CERT-SNET-02.
- * Shape: Choose a shape (e.g., 10 Mbps, adjust based on needs).
- * Click Next.
- * Leave backend sets and listeners as default for now (we'll configure the listener next).
- * Click Create Load Balancer and wait for it to be provisioned.

Step 2: Create a Listener

- * Once the load balancer is created, go to the Load Balancers page and click on PBT-CERT-LB-01.
- * Under Resources, click Listeners.
- * Click Create Listener.
- * Enter the following details:
- * Name: PBT-CERT-LB_LTSN_01
- * Protocol: Select HTTPS.
- * Port: Enter 443.
- * Certificate: Click Add Certificate, then select the PBT-CERT-01-`<username>` certificate (e.g., PBT-CERT-0199008677labuser01) created in Task 5.
- * Leave other settings (e.g., SSL handling) as default unless specified.

* ClickCreate.

Step 3: Configure the Backend Set

* In the PBT-CERT-LB-01 details page, underResources, clickBackend Sets.

* ClickCreate Backend Set(if not already created).

* Enter basic details (e.g., name like PBT-CERT-BS-01).

* Add a backend server:

* IP Address: Use the private IP of PBT-CERT-VM-01 (find this in the instance details under Compute>Instances).

* Port: 80 (HTTP, as configured on the web server).

* Protocol: HTTP.

* ClickCreate.

Step 4: Attach the Security List to the Subnet

* Navigate toNetworking>Virtual Cloud Networks.

* Select PBT-CERT-VCN-01 and clickSubnets.

* Click on LB-Subnet-PBT-CERT-SNET-02.

* UnderSecurity Lists, ensure PBT-CERT-LB-SL-01 is attached. If not:

* ClickEdit.

* Remove the default security list and add PBT-CERT-LB-SL-01.

* ClickSave Changes.

Step 5: Verify the Configuration

* Ensure the load balancer health status is OK (check underBackend Sets>Health).

* Test by accessing <https://<load-balancer-public-ip>> in a browser (replace with the public IP from the load balancer details).

NEW QUESTION # 34

"A business has a hybrid cloud infrastructure with Oracle Linux instances running in OCI and on-premises.

They want to reduce the amount of bandwidth used when patching systems.

Which component of OS Management Hub can help to reduce the bandwidth usage for patching?

- **A. Profiles"**
- B. Dynamic groups
- C. Management stations
- D. Management agents

Answer: A

NEW QUESTION # 35

An OCI administrator notices that a compute instance running in the production compartment is unable to create Object Storage buckets using the OCI CLI command:

`oci os bucket create --name mybucket --compartment-id <compartment_OCID> --auth instance_principal` The error message returned states:

"NotAuthorizedOrNotFound: You are not authorized to perform this action." The administrator verifies that the instance has Internet access and can reach OCI endpoints.

What then could be causing the issue?

- A. The bucket name is already in use, causing a conflict.
- B. The policy is written at the root compartment instead of the production compartment.
- **C. The instance is not part of any Dynamic Group or the matching rule is incorrect.**
- D. The instance is using the wrong OCI CLI authentication method.

Answer: C

NEW QUESTION # 36

"Your company is building a highly available and secure web application on OCI. Because of increasing malicious web-based attacks, the security team has mandated that web servers should not be exposed directly to the Internet.

How should you architect the solution while ensuring fault tolerance and security?

- A. Deploy at least three web servers in different fault domains within a private subnet. Place a public load balancer in a public subnet, but skip WAF configuration.

- B. Deploy at least three web servers in different fault domains within a public subnet, each with a public IP address. Deploy Web Application Firewall (WAF), and configure an origin for each public IP.
- C. Deploy at least three web servers in different fault domains within a public subnet. Use OCI Traffic Management service for DNS-based load balancing."
- D. Deploy at least three web servers in different fault domains within a private subnet. Place a public load balancer in a public subnet and configure a back-end set for all web servers. Deploy Web Application Firewall (WAF) and set the load balancer public IP address as the origin.

Answer: D

NEW QUESTION # 37

During your investigation of a load balancer issue, you discovered that all back-end servers associated with one of the affected listeners were reported as unhealthy. However, when you checked the back-end servers, they seemed to be working just fine. What might be causing this issue?

- A. Overloaded back-end servers
- B. Misconfigured health check
- C. Incorrect subnet configuration
- D. Incorrect DNS configuration
- E. Misconfigured security rule

Answer: B

NEW QUESTION # 38
