

# NS0-901 Test Score Report, Answers NS0-901 Real Questions

However, it's not always the same. Cramming is not what shall stay in your mind forever. you can forget the lines anytime making you blank while you are trying to solve your NS0-901 Exam Questions. So, don't cram even if it takes you a little more time to clear your doubts and get the concept clear. Cramming is not going to stay with you forever.

Get the Most Recent Network Appliance NS0-901 Exam Questions for Guaranteed Success: It would be really helpful to purchase NetApp Certified AI Expert Exam (NS0-901) exam dumps right away. If you buy this Network Appliance Certification Exams product right now, we'll provide you with up to 365 days of free updates for NetApp Certified AI Expert Exam (NS0-901) authentic questions. You can prepare using these no-cost updates in accordance with the most recent test content changes provided by the Network Appliance NS0-901 exam dumps.

## Avail Realistic NS0-901 Test Score Report to Pass NS0-901 on the First Attempt

Compared with other products, one of the advantages of NS0-901 Exam Braindumps is that we offer you free update for 365 days after purchasing. In this condition, you needn't have to spend extra money for the updated version. You just need to spend some money, so you can get the updated version in the following year. It's quite cost-efficient for you. Besides if we have the updated version, our system will send it to you automatically.

## Network Appliance NetApp Certified AI Expert Exam Sample Questions (Q35-Q40):

### NEW QUESTION # 35

A team has deployed a Retrieval-Augmented Generation (RAG) system to answer customer queries. Recently, users have complained that the answers provided by the chatbot are outdated and do not reflect the latest product updates. An architect investigates and finds the following status log from the RAG pipeline's data ingestion monitor.

Timestamp: 2025-07-11T14:00:00Z

System: RAG Pipeline Monitor

Status: WARNING

Message: Vector DB freshness check failed.

Source data appears stale.

Vector\_DB\_Last\_Update: 2025-06-10T08:00:00Z

Knowledge\_Base\_Last\_Modified: 2025-07-11T13:15:00Z

Data\_Sync\_Service: BlueXP copy and sync

Sync\_Job\_Status: Succeeded

Based on the log, what is the most likely cause of the outdated answers?

- A. The knowledge base itself has not been updated with the latest product information.

- B. The LLM needs to be fine-tuned with the new product information.
- C. The BlueXP copy and sync service is failing to copy data to the staging area.
- D. The process that converts staged documents into vectors and updates the vector database is not running.

**Answer: D**

#### NEW QUESTION # 36

An MLOps engineer is deploying a training pod that requires a high-performance volume. After applying the pod and PVC manifests, the pod remains in a 'Pending' state. The engineer runs 'kubectl describe pod training-pod-7d8c' and sees the following event:

Events:

Type Reason Age From Message

-----

Warning FailedScheduling 2m15s

default-scheduler 0/4 nodes are available: 1 node(s) had volume node affinity conflict, 3 node(s) didn't find available persistent volume to bind.

The engineer then inspects the associated PVC and sees its status is also 'Pending'.

What is the most likely cause of this issue?

- A. The Kubernetes scheduler is malfunctioning and cannot assign pods to nodes.
- B. The 'storageClassName' specified in the PVC does not match any existing StorageClass managed by Trident.
- C. The ONTAP backend is out of available capacity to provision a new volume.
- D. The Trident controller pod has crashed and needs to be restarted.

**Answer: B**

#### NEW QUESTION # 37

An AI team is embarking on a project to train a new, large-scale computer vision model from scratch. The lead architect emphasizes that the success of the project depends on four fundamental inputs that must be available and managed throughout the training process. Which of the following are the four essential requirements for model generation?

- A. Data, code, compute, and time.
- B. A pre-trained model, a validation set, an inference engine, and a cloud provider.
- C. A data lake, a data warehouse, a data pipeline, and a data mart.
- D. A project manager, a data scientist, a software engineer, and a budget.

**Answer: A**

#### NEW QUESTION # 38

An architect is designing a comprehensive AI platform for a large enterprise. The platform must support the entire data lifecycle, from ingest at the edge to a central data lake, and finally to a high-performance training cluster.

The requirements are:

- Edge Ingest: Data must be collected at remote sites and efficiently replicated to the core.
- Data Lake: A central, petabyte-scale repository for unstructured data, accessible via the S3 protocol.
- Training Cluster: A high-performance compute cluster that requires low-latency, parallel file access to training datasets.
- Data Traceability: All datasets used for training must be immutably versioned.

Which combination of NetApp technologies and protocols should the architect choose to build this solution? (Select all that apply.)

- A. Use iSCSI as the primary protocol for the data lake to ensure maximum compatibility.
- B. Use NetApp FlexCache to tier cold data from the data lake to the public cloud.
- C. Use NetApp ONTAP systems at the edge and NetApp SnapMirror to replicate data to the core data center.
- D. Use NetApp StorageGRID to create the petabyte-scale, S3-accessible data lake at the core.
- E. Use NetApp Snapshots on the training dataset volumes to create immutable, point-in-time versions for traceability.
- F. Use a NetApp E-Series system with a parallel file system (like BeeGFS) to provide high-performance, parallel file access for the training cluster.

**Answer: C,D,E,F**

### NEW QUESTION # 39

An AI architect needs to design a complete, end-to-end data pipeline for a new generative AI application at a financial services firm. The application will allow internal analysts to query a massive, 500 TB archive of historical market data and reports to generate summaries. The firm has the following environment and requirements:

Data\_Sources: A mix of on-premises ONTAP filers and StorageGRID S3 buckets.

Requirement\_1: All queries must be answered using only the private data archive.

Requirement\_2: All generated summaries must provide citations to the source reports.

Requirement\_3: All data containing client PII must be identified and excluded from the LLM context.

Requirement\_4: The solution must be cost-effective for the large, mostly-read data archive.

Which set of actions and technologies constitutes the most robust and compliant solution?

(Select all that apply.)

- A. Use NetApp XCP to perform a one-time migration of all data from the ONTAP filers to the StorageGRID data lake.
- B. Deploy BlueXP classification to scan the entire StorageGRID data lake to identify and tag all files containing PII.
- C. Use SnapMirror to replicate the StorageGRID data lake to a high-performance NetApp ASA system for faster query performance.
- D. Implement a Retrieval-Augmented Generation (RAG) architecture to meet the requirements for private data usage and source citation.
- E. During the RAG retrieval step, filter out any documents tagged as containing PII by BlueXP classification before sending them to the LLM.
- F. Fine-tune a foundation model on the entire 500 TB dataset to ensure it understands the financial context.

Answer: A,B,D,E

### NEW QUESTION # 40

.....

There are rare products which can rival with our products and enjoy the high recognition and trust by the clients like our products. Our products provide the NS0-901 test guide to clients and help they pass the test NS0-901 certification which is highly authorized and valuable. Our company is a famous company which bears the world-wide influences and our NS0-901 Test Prep is recognized as the most representative and advanced study materials among the same kinds of products. Whether the qualities and functions or the service of our product, are leading and we boost the most professional expert team domestically.
