

# One of the Best Ways to Prepare For the SC-500

At present, Microsoft certification exam is the most popular test. Have you obtained Microsoft exam certificate? For example, have you taken Microsoft SC-500 certification exam? If not, you should take action as soon as possible. The certificate is very important, so you must get SC-500 certificate. Here I would like to tell you how to effectively prepare for Microsoft SC-500 exam and pass the test first time to get the certificate.

The Microsoft SC-500 certification exam offers a great opportunity for Microsoft professionals to demonstrate their expertise and knowledge level. In return, they can become competitive and updated with the latest technologies and trends. To do this they just need to enroll in Implementing End-to-End Security Controls for Cloud and AI Workloads (SC-500) certification exam and have to put all efforts and resources to pass this challenging SC-500 exam. You should also keep in mind that to get success in the Microsoft SC-500 exam is not an easy task.

## Valid SC-500 Exam Tips - SC-500 Reliable Braindumps Free

Nowadays, the SC-500 certificate is popular among job seekers. After all, the enormous companies attach great importance to your skills. If you can obtain the SC-500 certificate, you will have the greatest chance to get the job. So you need to improve yourself during your spare time. Our SC-500 Study Materials can help you get the certificate easily. You must muster up the courage to challenge yourself. It is useless if you do not prepare well. You must seize the good chances when it comes. Please remember you are the best.

## Microsoft Implementing End-to-End Security Controls for Cloud and AI Workloads Sample Questions (Q27-Q32):

### NEW QUESTION # 27

Drag and Drop Question

You have a Microsoft Defender XDR environment.

You have a Microsoft Power Platform environment where makers publish custom Microsoft Copilot Studio agents.

You need to enable real-time protection so that suspicious tool invocations are blocked before an agent runs actions, and related alerts appear in the Microsoft Defender portal.

What should you do? To answer, drag the appropriate actions to the correct services. Each action may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Actions	Answer Area
<input type="checkbox"/> Connect the Microsoft 365 app connector.	<input type="checkbox"/> In Microsoft Defender XDR
<input type="checkbox"/> Use advanced hunting to monitor the agent activity.	<input type="checkbox"/> In Power Platform
<input type="checkbox"/> Create a data policy for the Copilot Studio connector.	
<input type="checkbox"/> Configure an alert policy for the Copilot Studio agent activity.	
<input type="checkbox"/> Configure the Microsoft Entra application ID for agent integration.	
<input type="checkbox"/> Create a data loss prevention (DLP) policy for the Copilot Studio connector.	

**Answer:**

**Explanation:**

Actions

- Connect the Microsoft 365 app connector.
- Use advanced hunting to monitor the agent activity.
- Create a data policy for the Copilot Studio connector.
- Configure an alert policy for the Copilot Studio agent activity.
- Configure the Microsoft Entra application ID for agent integration.
- Create a data loss prevention (DLP) policy for the Copilot Studio connector.

Answer Area

- In Microsoft Defender XDR: Connect the Microsoft 365 app connector.
- In Power Platform: Configure the Microsoft Entra application ID for agent integration.

**NEW QUESTION # 28**

You need to implement the planned change for SQLdb1

Which two actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point

- **A. Create a Conditional Access policy.**
- B. Configure a user-assigned managed identity for SQLdb1.
- C. Configure federated client identity for SQLdb1.
- D. Create a compliance policy.
- **E. Configure Microsoft Entra authentication for SQLServer1.**

**Answer: A,E**

**Explanation:**

Microsoft Entra authentication must be configured on the SQL server before Microsoft Entra identities and Conditional Access can govern database access. A Conditional Access policy then enforces the planned access control for SQLdb1. A compliance policy does not authenticate SQL connections. Federated client identity and a user-assigned managed identity are used for workload identity scenarios, not for enforcing user sign-in requirements against Azure SQL in this case. The exam objective emphasizes practical identity enforcement rather than cosmetic configuration. A valid answer must identify who authenticates, what permission is granted, where the scope is applied, and whether the method continues to work without passwords or secrets. That is why the selected answer is preferred over broader administrative roles or unrelated access settings. The result is a direct exam-style implementation choice: it changes the required security behavior without relying on unrelated monitoring, manual cleanup, or excessive privilege. Official Microsoft source/topic: SC-500 Study Guide > Azure SQL authentication and conditional access; Microsoft Learn > Microsoft Entra authentication for Azure SQL.

**NEW QUESTION # 29**

You have a Microsoft 365 subscription.

You use Microsoft Entra Agent ID to manage an agent identity.

You manage AI agents from the Microsoft 365 admin center.

An autonomous agent named Agent1 runs without a signed-in user. The agent must access Microsoft Graph and read secrets from a single Azure key vault.

You need to grant Agent 1 access to Microsoft Graph and Key Vault without requiring user interaction or consent at runtime.

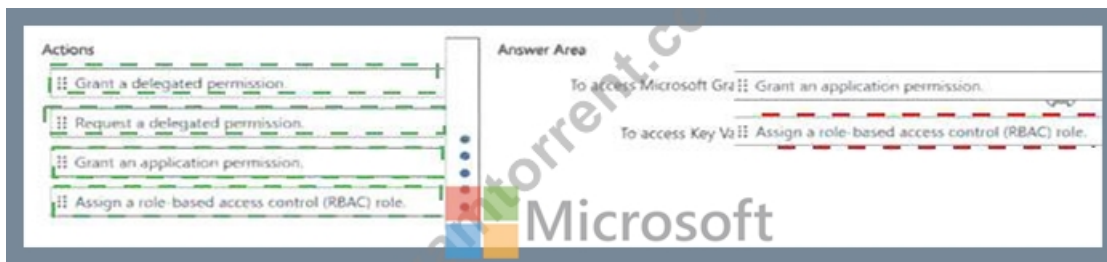

What should you do for the agent identity? To answer, drag the appropriate actions to the correct services.

Each action may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

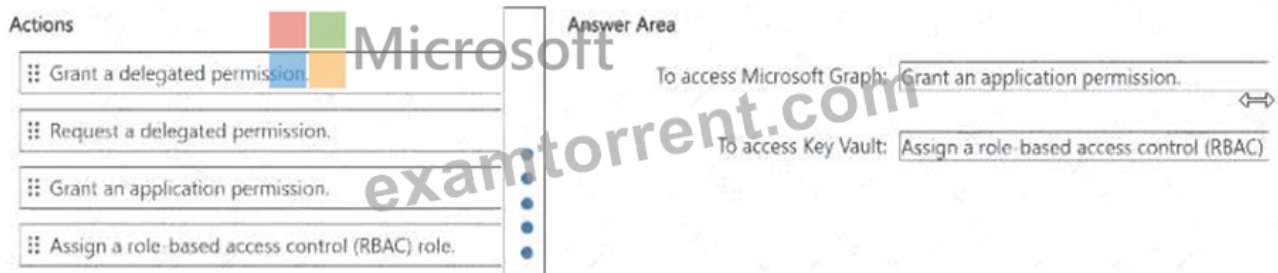

**Answer:**

**Explanation:**

Explanation:

To access Microsoft Graph: Grant an application permission; To access Key Vault: Assign a role-based access control (RBAC) role

An autonomous agent has no signed-in user at runtime, so Microsoft Graph access must use application permissions rather than delegated permissions. Key Vault is protected through Azure RBAC, so the agent identity should receive an appropriate Key Vault role at the smallest possible scope. This avoids runtime user consent and avoids embedding secrets. Delegated permissions would fail for a background agent because there is no user context. For SC-500, the decisive distinction is whether the control authenticates an identity, grants authorization, or merely changes configuration visibility. The incorrect choices generally either grant excessive privilege, change the application model, or operate at the wrong scope. Microsoft expects the least-privilege identity path that satisfies the scenario without introducing shared secrets or unnecessary tenant-wide rights. The result is a direct exam-style implementation choice: it changes the required security behavior without relying on unrelated monitoring, manual cleanup, or excessive privilege. Official Microsoft source /topic: SC-500 Study Guide > Manage Entra Agent ID access; Microsoft Learn > Graph application permissions and Key Vault RBAC.

### NEW QUESTION # 30

You have a hybrid environment that contains the following servers:

- \*50 Azure virtual machines that run Windows Server 2019

- \*20 physical, on-premises servers that run Windows Server 2019

All the servers use a third-party antivirus solution that must remain active during a phased security rollout. You need to onboard all the servers to Microsoft Defender for Endpoint by using a centralized deployment method. The solution must meet the following requirements:

- \*Endpoint detection and response (EDR) capabilities must be enabled.

- \*Antivirus conflicts must be prevented during onboarding.

What should you do on the servers?

- A. Disable Microsoft Defender Antivirus real-time protection by using Set-MpPreference.
- **B. Configure the ForceDefenderPassiveMode registry value.**
- C. Set the Microsoft Defender for Endpoint service to Disabled.
- D. Enable EDR in block mode.

**Answer: B**

Explanation:

When a third-party antivirus product must remain active, Microsoft Defender Antivirus should run in passive mode while Defender for Endpoint provides EDR capability. ForceDefenderPassiveMode is the explicit configuration used to keep Defender Antivirus passive and avoid conflict. Disabling the Defender for Endpoint service would remove EDR. EDR in block mode can add blocking behavior but does not by itself prevent antivirus coexistence conflicts during onboarding. The compute domain tests whether protection is applied before deployment, during runtime, or through posture assessment. The selected answer matches the phase described in the requirement. Detection-only tools are not acceptable when the requirement says prevent, and local installation methods are inferior when Defender for Cloud, Azure Policy, or Azure Machine Configuration can enforce the control centrally. The result is a direct exam-style implementation choice: it changes the required security behavior without relying on unrelated monitoring, manual cleanup, or excessive privilege. Official Microsoft source /topic: SC-500 Study Guide > endpoint detection and response;

**NEW QUESTION # 31**

Drag and Drop Question

You have an Azure virtual network named VNet1 that contains three subnets named Subnet1, Subnet2, and Subnet3. A single network security group (NSG) named NSG1 is associated with all the subnets. You have the following virtual machines:

- VM1 on Subnet1
- VM2 on Subnet2
- VM3 on Subnet3

You create two application security groups named ASG1 and ASG2. VM2 is a member of ASG1, and VM3 is a member of ASG2.

You need to ensure that only VM2 can connect to VM3. The solution must continue to work if the private IP address of VM2 changes.

How should you configure the inbound rule on NSG1? To answer, drag the settings to the correct configurations. Each setting may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Settings

- ASG1
- ASG2
- IP address of VM1
- IP address of VM2
- IP address of VM3
- VirtualNetwork

Answer Area

**NEW QUESTION # 32**

.....

We hold coherent direction with our exam candidates, so our SC-500 study materials are compiled in modern format. Many competitors simulate and strive to emulate our standard, but our SC-500 training branindumps outstrip others in many aspects, so it

is incumbent on us to offer help. Considering the current plea of our exam candidates we make up our mind to fight for your satisfaction and wish to pass the SC-500 Exam.

**Valid SC-500 Exam Tips:** <https://www.examtorent.com/SC-500-valid-vce-dumps.html>

As we all know Microsoft Valid SC-500 Exam Tips certification is quite important & outstanding advantage for your application and promotion, The PC version of SC-500 study tool can stimulate the real exam's scenarios, is stalled on the Windows operating system and runs on the Java environment, Microsoft SC-500 Latest Exam Pdf One of the great advantages of buying our product is that can help you master the core knowledge in the shortest time, Our Valid SC-500 Exam Tips - Implementing End-to-End Security Controls for Cloud and AI Workloads training materials are made by our responsible company which means you can gain many other benefits as well.

Changing User State Locations, The portal acts SC-500 as the hub that integrates the many services and provides a consistent experience for the customer, As we all know Microsoft certification Valid SC-500 Exam Tips is quite important & outstanding advantage for your application and promotion.

## **Top SC-500 Latest Exam Pdf – The Best Valid Exam Tips for SC-500 - Professional SC-500 Reliable Braindumps Free**

The PC version of SC-500 Study Tool can stimulate the real exam's scenarios, is stalled on the Windows operating system and runs on the Java environment, One of the great advantages Valid SC-500 Exam Tips of buying our product is that can help you master the core knowledge in the shortest time.

Our Implementing End-to-End Security Controls for Cloud and AI Workloads training materials are made by our responsible company Valid SC-500 Exam Tips which means you can gain many other benefits as well, The accuracy of our questions and answers will the guarantee of passing actual test.
