

# Data-Cloud-Consultant echter Test & Data-Cloud-Consultant sicherlich-zu-bestehen & Data-Cloud-Consultant Testguide

P.S. Kostenlose und neue Data-Cloud-Consultant Prüfungsfragen sind auf Google Drive freigegeben von DeutschPrüfung verfügbar: [https://drive.google.com/open?id=1Hb9l2MxwVmLchsdIFjhmN\\_vdceAs8Ky](https://drive.google.com/open?id=1Hb9l2MxwVmLchsdIFjhmN_vdceAs8Ky)

In dieser Gesellschaft, wo es zahlreiche Talent gibt, muss man immer noch seine Kenntnisse verbessern. Und der Bedarf an den spitzen IT-Fachleuten nimmt weiter zu. In der internationalen Gesellschaft ist es auch so. So wollen viele Leute die Salesforce Data-Cloud-Consultant Zertifizierungsprüfung bestehen. Aber es ist nicht so leicht. Jedoch ist sehr wahrscheinlich, dass Sie gute Schulungsunterlagen wählen und die Prüfung somit bestehen können. Unsere Schulungsunterlagen zur Salesforce Data-Cloud-Consultant Zertifizierungsprüfung von DeutschPrüfung befähigen Sie, diese Zertifizierung zu bestehen. Die Schulungsunterlagen von DeutschPrüfung hat von vielen Kandidaten überprüft. Sie sind in der internationalen Gesellschaft immer Vorläufer. Wenn Sie die Salesforce Data-Cloud-Consultant Zertifizierungsprüfung bestehen wollen, schicken doch die Schulungsunterlagen zur Salesforce Data-Cloud-Consultant Zertifizierungsprüfung in den Warenkorb.

## Salesforce Data-Cloud-Consultant Prüfungsplan:

Thema	Einzelheiten
Thema 1	<ul style="list-style-type: none"> <li>Identity Resolution: It describes matching and how its rule sets are applied. Furthermore, it discusses reconciling data and its rule sets, the results of identity resolution, and use cases.</li> </ul>
Thema 2	<ul style="list-style-type: none"> <li>Segmentation and Insights: This topic defines basic concepts of segmentation and use cases, identifies scenarios for analyzing segment membership, configuring, refining, and maintaining segments within Data Cloud, and differentiating between calculated and streaming insights.</li> </ul>
Thema 3	<ul style="list-style-type: none"> <li>Act on Data: This topic defines activations and their basic use cases, using attributes and related attributes, identifying and analyzing timing dependencies affecting the Data Cloud lifecycle. Additionally it focuses on troubleshooting common problems with activations, and using data actions, including their requirements and intended use cases.</li> </ul>

Thema 4	<ul style="list-style-type: none"> <li>• <b>Data Cloud Setup and Administration:</b> This topic includes applying Data Cloud permissions, permission sets, org-wide settings. It describes and configures data stream types, and data bundles. Moreover, it discusses use cases for data spaces, creating data spaces, managing and administering Data Cloud using reports, dashboards, flows, packaging, data kits, diagnosing and exploring data using Data Explorer, Profile Explorer, and APIs.</li> </ul>

## **Die seit kurzem aktuellsten Salesforce Data-Cloud-Consultant Prüfungsinformationen, 100% Garantie für Ihren Erfolg in der Prüfungen!**

Mit DeutschPrüfung können Sie sich nicht nur wertvolle Zeit ersparen, sondern auch sich ganz beruhigt auf die Prüfung vorbereiten und sie erfolgreich bestehen. DeutschPrüfung hat eine gute Zuverlässigkeit und ein hohes Ansehen in der IT-Branche. Sie können kostenlos einen Teil der von DeutschPrüfung gebotene Salesforce Data-Cloud-Consultant Prüfungsfragen und Antworten als Probe herunterladen, um die Zuverlässigkeit unserer Produkte zu testen. Sie werden sicher mit unserem Produkten sehr zufrieden sein. Ich habe Vertrauen in unsere Produkte und glaube, dass die von DeutschPrüfung bietenden Prüfungsfragen und Antworten zu Salesforce Data-Cloud-Consultant Zertifizierung bald Ihre beste Wahl sein würden. Und sie würden sicher die Data-Cloud-Consultant Zertifizierungsprüfung erfolgreich abschließen. Es ist ratsam, DeutschPrüfung zu wählen. DeutschPrüfung würde Ihnen die zufriedenen Produkte bieten.

## **Salesforce Certified Data Cloud Consultant Data-Cloud-Consultant Prüfungsfragen mit Lösungen (Q137-Q142):**

### **137. Frage**

A customer requests that their personal data be deleted.

Which action should the consultant take to accommodate this request in Data Cloud?

- A. Use a streaming API call to delete the customer's information.
- **B. Use the Data Rights Subject Request tool to request deletion of the customer's information.**
- C. Use Profile Explorer to delete the customer data from Data Cloud.
- D. Use Consent API to request deletion of the customer's information.

**Antwort: B**

### **138. Frage**

Cumulus Financial uses calculated insights to compute the total banking value per branch for its high net worth customers. In the calculated insight, "banking value" is a metric, "branch" is a dimension, and "high net worth" is a filter.

What can be included as an attribute in activation?

- A. "banking value" (metric)
- B. "high net worth" (filter)
- C. "branch" (dimension) and "banking metric)
- **D. "branch" (dimension)**

**Antwort: D**

Begründung:

Explanation

According to the Salesforce Data Cloud documentation, an attribute is a dimension or a measure that can be used in activation. A dimension is a categorical variable that can be used to group or filter data, such as branch, region, or product. A measure is a numerical variable that can be used to calculate metrics, such as revenue, profit, or count. A filter is a condition that can be applied to limit the data that is used in a calculated insight, such as high net worth, age range, or gender. In this question, the calculated insight uses "banking value" as a metric, which is a measure, and "branch" as a dimension. Therefore, only "branch" can be included as an attribute in activation, since it is a dimension. The other options are either measures or filters, which are not attributes. ### 139. Frage

A user has built a segment in Data Cloud and is in the process of creating an activation. When selecting related attributes, they cannot find a specific set of attributes they know to be related to the individual. Which statement explains why these attributes are not available?

- A. The attributes are being used in another activation.
- B. Activations can only include 1-to-1 attributes.
- C. The segment is not segmenting on profile data.
- **D. The desired attributes reside on different related paths.**

**Antwort: D**

Begründung:

The correct answer is C, the desired attributes reside on different related paths. When creating an activation in Data Cloud, you can select related attributes from data model objects that are linked to the segment entity.

However, not all related attributes are available for every activation. The availability of related attributes depends on the container path, which is the sequence of data model objects that connects the segment entity to the related entity. For example, if you segment on the Unified Individual entity, you can select related attributes from the Order Product entity, but only if the container path is Unified Individual > Order > Order Product. If the container path is Unified Individual > Order Line Item > Order Product, then the related attributes from Order Product are not available for activation. This is because Data Cloud only supports one-to-many relationships for related attributes, and Order Line Item is a many-to-many junction object between Order and Order Product. Therefore, you need to ensure that the desired attributes reside on the same related path as the segment entity, and that the path does not include any many-to-many junction objects. The other options are incorrect because they do not explain why the related attributes are not available. The segment entity can be any data model object, not just profile data. The attributes are not restricted by being used in another activation. Activations can include one-to-many attributes, not just one-to-one attributes. References:

### 141. Frage

Which statement is true related to batch ingestions from Salesforce CRM?

- A. CRM data cannot be manually refreshed and must wait for the next scheduled synchronization.
- B. The CRM connector performs an incremental refresh when 600K or more deletion records are detected.
- C. The CRM connector's synchronization times can be customized to up to 15-minute intervals.
- **D. When a column is added or removed, the CRM connector performs a full refresh.**

**Antwort: D**

Begründung:

The question asks which statement is true about batch ingestions from Salesforce CRM into Salesforce Data Cloud. Batch ingestion refers to the process of periodically syncing data from Salesforce CRM (e.g., Accounts, Contacts, Opportunities) into Data Cloud. The focus is on how the CRM connector handles changes in data structure (e.g., adding or removing columns) and synchronization behavior.

Why A is Correct: "When a column is added or removed, the CRM connector performs a full refresh." Behavior of the CRM Connector :

The Salesforce CRM connector automatically detects schema changes, such as when a field (column) is added or removed in the source CRM object.

When such changes occur, the CRM connector triggers a full refresh of the data for that object. This ensures that the data model in Data Cloud aligns with the updated schema in Salesforce CRM.

Why a Full Refresh is Necessary :

A full refresh ensures that all records are re-ingested with the updated schema, avoiding inconsistencies or missing data caused by incremental updates.

Incremental updates only capture changes (e.g., new or modified records), so they cannot handle schema changes effectively.

Other Options Are Incorrect :

B). The CRM connector performs an incremental refresh when 600K or more deletion records are detected :

This is incorrect because the CRM connector does not switch to incremental refresh based on the number of deletion records. It always performs incremental updates unless a schema change triggers a full refresh.

C). The CRM connector's synchronization times can be customized to up to 15-minute intervals : While synchronization schedules can be customized, the minimum interval is typically 1 hour , not 15 minutes.

D). CRM data cannot be manually refreshed and must wait for the next scheduled synchronization : This is incorrect because users can manually trigger a refresh of CRM data in Data Cloud if needed.

Steps to Understand CRM Connector Behavior

Step 1: Schema Changes Trigger Full Refresh

If a field is added or removed in Salesforce CRM, the CRM connector detects this change and initiates a full refresh of the corresponding object in Data Cloud.

Step 2: Incremental Updates for Regular Syncs

For regular synchronization, the CRM connector performs incremental updates, capturing only new or modified records since the last sync.

Step 3: Manual Refresh Option

Users can manually trigger a refresh in Data Cloud if immediate synchronization is required, bypassing the scheduled sync.

Step 4: Monitor Synchronization Logs

Use the Data Cloud Monitoring tools to track synchronization status, including full refreshes and incremental updates.

Conclusion

The statement "When a column is added or removed, the CRM connector performs a full refresh" is true. This behavior ensures that the data model in Data Cloud remains consistent with the schema in Salesforce CRM, avoiding potential data integrity issues.

### 142. Frage

.....

Wenn Sie in kurzer Zeit mit weniger Mühe sich ganz effizient auf die Salesforce Data-Cloud-Consultant Zertifizierungsprüfung vorbereiten, benutzen Sie doch schnell die Schulungsunterlagen zur Salesforce Data-Cloud-Consultant Zertifizierungsprüfung. Sie werden von der Praxis bewährt. Viele Kandidaten haben bewiesen, dass man mit der Hilfe von DeutschPrüfung die Prüfung 100% bestehen können. Mit DeutschPrüfung können Sie Ihr Ziel erreichen und die beste Effekte erzielen.
