

F5CAB4 Valid Torrent | Detailed F5CAB4 Answers

<http://www.validtorrent.com>

High-quality valid dumps & reliable dumps torrent & useful PDF torrent

If you want to pass an exam just one time, then choose. Our F5CAB4 exam dumps will provide you such chance like this. F5CAB4 exam braindumps are verified by experienced experts in the field, and they are quite familiar with the questions and answers of the exam center, therefore the quality of the F5CAB4 Exam Dumps are guaranteed. Besides we offer free update for 365 days after purchasing.

We provide the update freely of F5CAB4 Exam Questions within one year and 50% discount benefits if buyers want to extend service warranty after one year. The old client enjoys some certain discount when buying other exam materials. We update the F5CAB4 guide torrent frequently and provide you the latest study materials which reflect the latest trend in the theory and the practice. So you can master the BIG-IP Administration Control Plane Administration test guide well and pass the exam successfully. While you enjoy the benefits we bring you can pass the exam.

Detailed F5CAB4 Answers | Valid Test F5CAB4 Vce Free

As you know, the first-class quality always come with the first service. That is exactly what describe our F5CAB4 exam materials. Not only that our F5CAB4 training guide can attract you for its best quality, but also you will be touched by the excellent service. If you have any question about our F5CAB4 Learning Engine, our service will give you the most professional suggestion and help. And we work 24/7 online. So you can always find we are accompanying you.

F5 BIG-IP Administration Control Plane Administration Sample Questions (Q39-Q44):

NEW QUESTION # 39

A BIG-IP Administrator uses a device group to share the workload and needs to perform service on a BIG-IP device currently active for a traffic group. The administrator needs to enable the traffic group to run on another BIG-IP device in the device group. What should the administrator do to meet the requirement? (Choose one answer)

- A. Select Traffic Group and then select Force to Standby
- B. Select Traffic Group on Primary Unit and then select Demote
- C. Create a new Traffic Group and then fail to Standby Unit
- D. **Select Traffic Group and then select Failover**

Answer: D

Explanation:

Comprehensive and Detailed Explanation From BIG-IP Administration Control Plane Administration documents:

Traffic Groups are the mechanism BIG-IP uses to control which device owns specific application traffic in a high-availability (HA) configuration. When maintenance is required on a device that is currently active for a traffic group, the correct and recommended action is to fail over that traffic group to another device in the device group.

Failing over the traffic group moves ownership of that traffic group (and the virtual servers associated with it) to another available device without forcing the entire device into standby.

This allows targeted maintenance while minimizing impact to other traffic groups that may still be active on the device.

Why the other options are incorrect:

A is unnecessary and incorrect; traffic groups are not recreated for routine maintenance.

C forces the entire device to standby, which may move more traffic than intended.

D (Demote) affects device trust/priority behavior and is not the standard or recommended method for moving traffic group ownership.

Therefore, selecting the Traffic Group and choosing Failover is the correct solution.

NEW QUESTION # 40

A user needs to generate a QKView to upload to iHealth to determine any issues with upgrading TMOS. Where can the user generate the QKView in the Configuration Utility?

- A. **System> Support**
- B. System> Configuration
- C. System> Software Management
- D. System> Archives

Answer: A

Explanation:

Comprehensive and Detailed Explanation From BIG-IP Administration Control Plane Administration documents: Generating a QKView is a standard procedure for identifying device health and upgrade readiness⁴². Within the Configuration Utility, this Control Plane diagnostic tool is located under System> Support⁴³. This utility collects configuration and state data into a single file used by the iHealth 'Upgrade Advisor' to report on known bugs or compatibility issues prior to a version change.

NEW QUESTION # 41

A BIG-IP Administrator needs to restore a UCS file to an F5 device using the Configuration Utility.

Which section of the Configuration Utility should the BIG-IP Administrator access to perform this task? (Choose one answer)

- A. Local Traffic > Policies
- B. **System> Archives**
- C. System> Configuration
- D. Local Traffic > Virtual Servers

Answer: B

Explanation:

Comprehensive and Detailed Explanation From BIG-IP Administration Control Plane Administration documents:

In the BIG-IP Configuration Utility, all system backup and restore operations-including UCS (User Configuration Set) file restoration-are performed from the Archives section.

The correct navigation path is:

System > Archives

From this location, the administrator can:

Upload UCS files

Restore UCS backups

Manage system archive files used for backup and recovery

Why the other options are incorrect:

A . System > Configuration is used for general system settings, not backup restoration.

C . Local Traffic > Virtual Servers is used for application traffic objects.

D . Local Traffic > Policies manages traffic policies, not system backups.

Therefore, the correct section to restore a UCS file using the Configuration Utility is System > Archives.

NEW QUESTION # 42

Which file should the BIG-IP Administrator check to determine when a Virtual Server changed its status?

- A. /var/log/monitors
- B. **/var/log/ltm**
- C. /var/log/lastlog
- D. /var/log/audit

Answer: B

Explanation:

Comprehensive and Detailed Explanation From BIG-IP Administration Control Plane Administration documents: Monitoring and reporting current device status involves tracking the health of traffic objects like Virtual Servers. The Control Plane logs transition events-such as a Virtual Server moving from 'Available' (green) to 'Offline' (red) due to health monitor failures-in the /var/log/ltm file. While the audit log tracks who changed a configuration, the LTM log tracks system-initiated status changes.

NEW QUESTION # 43

A BIG-IP Administrator reviews the Plane CPU Usage performance chart and discovers a high percentage of Control Plane utilization. Which type of traffic does this indicate a higher usage of?

- A. **Administrative**
- B. Tunnel
- C. Application
- D. Accelerated

Answer: A

Explanation:

Comprehensive and Detailed Explanation From BIG-IP Administration Control Plane Administration documents: F5 architecture distinguishes between the Data Plane (TMM processing application traffic) and the Control Plane (Linux host processing management tasks). High Control Plane CPU utilization typically points to administrative activities such as heavy GUI usage, complex API calls (iControl), large-scale configuration synchronizations, or intensive logging/monitoring tasks rather than the actual switching or load balancing of application data.

NEW QUESTION # 44

.....

PrepAwayPDF trained experts have made sure to help the potential applicants of BIG-IP Administration Control Plane Administration certification to pass their BIG-IP Administration Control Plane Administration exam on the first try. Our PDF format carries real F5 F5CAB4 Exam Dumps. You can use this format of F5 F5CAB4 actual questions on your smart devices.
