## Providing You High Pass-Rate New C\_SEC\_2405 Test Dumps with 100% Passing Guarantee

Everyone is not willing to fall behind, but very few people take the initiative to change their situation. Take time to make a change and you will surely do it. Our C\_SEC\_2405 actual test guide can give you some help. Our company aims to help ease the pressure on you to prepare for the exam and eventually get a certificate. Obtaining a certificate is equivalent to having a promising future and good professional development. Our C\_SEC\_2405 Study Materials have a good reputation in the international community and their quality is guaranteed. Why don't you there have a brave attempt? You will certainly benefit from your wise choice.

## SAP Certified Associate - Security Administrator Sample Questions (Q59-Q64):

### NEW QUESTION # 59

What must you do before you can use transaction PFCG? Note: There are 2 correct answers to this question.

- A. Fill tables USOBT and USOBX with the SAP-delivered authorization default values.
- B. Set the system profile parameter auth/no\_check\_in\_some\_cases to N.
- C. Set the system profile parameter auth/no\_check\_in\_some\_cases to Y.
- D. Fill tables USOBT\_C and USOBX\_C with the SAP-delivered authorization default values.

**Answer: A,C**

Explanation:

Before using transaction PFCG (Role Maintenance) in SAP systems, two prerequisites must be met. First, tables USOBT (Authorization Object Defaults) and USOBX (Check Indicators) must be filled with SAP-delivered authorization default values, which provide the standard authorization objects and check indicators for transactions. These tables, maintained via transaction SU25, ensure that PFCG can propose appropriate authorizations when building roles. Second, the system profile parameter auth/no\_check\_in\_some\_cases must be set to Y, enabling the system to bypass authorization checks for certain transactions, which is necessary for PFCG to function correctly during role creation and maintenance. Setting this parameter to N would enforce stricter checks, potentially restricting PFCG functionality. Tables USOBT\_C and USOBX\_C are customer-specific and not required for initial PFCG setup, as they store customized values rather than SAP defaults.

These steps ensure that PFCG operates effectively, supporting secure and efficient role management in SAP environments.

### NEW QUESTION # 60

In SAP HANA Cloud, who has access to a database object?

- A. The user SYSTEM and the creator
- B. The user DBADMIN and the group owner
- C. The owner and the SAP-owned users
- D. The creator and the schema owner

**Answer: D**

Explanation:

\* Context: In SAP HANA Cloud, database object access is determined by the object's ownership.

\* Solution Explanation:

\* Creator: The user who creates the object is assigned ownership.

\* Schema Owner: The schema owner also has access to the object, as objects reside within a schema.

SAP Security References:

\* SAP HANA Cloud Security Documentation

\* SAP Help Portal on Database Object Ownership

### NEW QUESTION # 61

What is required to centrally administer a user's master record using Central User Administration? Note:

There are 3 correct answers to this question.

- A. An existing master record in the target client for the user
- B. An RFC destination to the target system
- C. An entry in transaction BD54 for the child system
- D. An ALE distribution model
- E. An RFC destination to the target client

**Answer: B,C,D**

### NEW QUESTION # 62

In SAP S/4HANA Cloud Public Edition, what does the ID of an SAP-predefined Space refer to?

- A. The SAP Fiori applications it was defined for
- B. The software release it was created for
- C. The business roles it is to be assigned to
- D. The business area it was designed for

**Answer: D**

Explanation:

In SAP S/4HANA Cloud Public Edition, the ID of an SAP-predefined Space refers to the business area it was designed for.

Spaces in the SAP Fiori launchpad are organizational units that group Fiori apps and tiles relevant to specific business functions, such as finance, procurement, or human resources. The ID of a predefined Space reflects this business area, providing a clear and intuitive way to organize applications for users based on their functional roles. This design enhances user experience by ensuring that relevant apps are easily accessible within a business context. The ID does not refer to the software release, as Spaces are release-independent, nor to specific Fiori applications or business roles, which are assigned separately via catalogs and roles. By tying the Space ID to the business area, SAP ensures that the Fiori launchpad aligns with organizational processes, supporting efficient navigation and access control while maintaining a user-centric and business-focused interface.

### NEW QUESTION # 63

Which protocol is the industry standard for provisioning identity and access management in hybrid landscapes?

- A. OIDC
- B. SAML
- C. SCIM
- D. SSL

**Answer: C**

Explanation:

SCIM (System for Cross-domain Identity Management) is the industry-standard protocol for provisioning and managing identity information in hybrid landscapes. It simplifies integration between identity providers and systems.
