## Quiz 2026 Latest JN0-336 Questions - Security, Specialist (JNCIS-SEC) Realistic Training Pdf

The three versions of our JN0-336 training materials each have its own advantage, now I would like to introduce the advantage of the software version for your reference. On the one hand, the software version can simulate the real JN0-336 examination for all of the users in windows operation system. On the other hand, if you choose to use the software version, you can download our JN0-336 Exam Prep on more than one computer. We strongly believe that the software version of our study materials will be of great

importance for you to prepare for the exam and all of the employees in our company wish you early success.

## Juniper Security, Specialist (JNCIS-SEC) Sample Questions (Q93-Q98):

### NEW QUESTION # 93

Which two statements are correct about security policy changes when using the policy rematch feature? (Choose two.)

- A. When a policy change includes changing the policy's source or destination address match condition, all existing sessions are reevaluated.
- B. When a policy change includes changing the policy's action from permit to deny, all existing sessions are maintained
- C. When a policy change includes changing the policy's source or destination address match condition, all existing sessions are dropped.
- D. When a policy change includes changing the policy's action from permit to deny, all existing sessions are dropped.

**Answer: A,D**

Explanation:

policy rematch is a feature that enables the device to reevaluate an active session when its associated security policy is modified. The session remains open if it still matches the policy that allowed the session initially. The session is closed if its associated policy is renamed, deactivated, or deleted1.

### NEW QUESTION # 94

Which method does the IoT Security feature use to identify traffic sourced from IoT devices?

- A. The SRX Series device streams transit traffic received from the IoT device to Juniper ATP Cloud.
- B. The SRX Series device streams metadata from the IoT device transit traffic to Juniper ATP Cloud Juniper ATP Cloud.
- C. The SRX Series device identifies IoT devices using their MAC address.
- D. The SRX Series device identifies IoT devices from metadata extracted from their transit traffic.

**Answer: D**

Explanation:

The metadata is used to identify the type of device, its associated activities and its threat profile. This information is used to determine the appropriate security policy for the device. For more information on IoT Security, please refer to the Juniper Security, Specialist (JNCIS-SEC) study guide.

### NEW QUESTION # 95

Which three statements about SRX Series device chassis clusters are true? (Choose three.)

- A. A control link failure causes the secondary cluster node to be disabled.
- B. Heartbeat messages verify that the chassis cluster control link is working.
- C. Chassis cluster control links must be configured using RFC 1918 IP addresses.
- D. Recovery from a control link failure requires that the secondary member device be rebooted.
- E. Chassis cluster member devices synchronize configuration using the control link.

**Answer: A,B,E**

Explanation:

B: Chassis cluster member devices synchronize configuration using the control link: This statement is correct because the control link is used for configuration synchronization among other functions.

C: A control link failure causes the secondary cluster node to be disabled: This statement is correct because a control link failure causes the secondary node to become ineligible for primary role and remain in secondary role until the control link is restored.

E: Heartbeat messages verify that the chassis cluster control link is working: This statement is correct because heartbeat messages are sent periodically over the control link to monitor its status.

### NEW QUESTION # 96

Which two devices would you use for DDoS protection with Policy Enforcer? (Choose two.)

- A. vQFX
- B. QFX
- C. vMX
- D. MX

**Answer: C,D**

Explanation:

The MX and vMX devices can be used for DDoS protection with Policy Enforcer. Policy Enforcer is a Juniper Networks solution that provides real-time protection from DDoS attacks. It can be used to detect and block malicious traffic, and also provides granular control over user access and policy enforcement.

The MX and vMX devices are well-suited for use with Policy Enforcer due to their high-performance hardware and advanced security features.

#### NEW QUESTION # 97

Your network uses a single JSA host and you want to implement a cluster.

In this scenario, which two statements are correct? (Choose two.)

- A. The primary and secondary hosts must be configured with the same storage devices.
- B. The software versions on both primary and secondary hosts
- C. The cluster virtual IP will need an unused IP address assigned.
- D. The secondary host can backup multiple JSA primary hosts.

**Answer: B,C**

Explanation:

According to the Juniper Networks JNCIP-SEC Study Guide, when setting up a cluster with a single JSA host, both the primary and secondary hosts must have the same software version installed. Additionally, an unused IP address must be assigned to the cluster virtual IP. The primary and secondary hosts do not need to be configured with the same storage devices, and the secondary host cannot be used to backup multiple JSA primary hosts.

#### NEW QUESTION # 98

.....

Are you ready to accept this challenge and want to crack the Security, Specialist (JNCIS-SEC) JN0-336 certification exam? If your answer is yes then just get register for the JN0-336 test and start preparation with ValidBraindumps JN0-336 PDF Questions and practice test software.
