Salesforce Certified Sharing and Visibility Architect Sample Questions (Q52-Q57):

NEW QUESTION # 52

Universal Containers has selected a small and diverse group of users to review inactive accounts. Given the Private sharing model, a public group was created and made available to this group of users. A sharing rule was created to make inactive Accounts visible to the public group. However, some of these users are reporting they don't see any of the Accounts that were shared with the public group.

What is the underlying issue for these users?

- A. The Accounts are owned by users higher in the role hierarchy.
- **B. The users are in profiles that have no access to the Account object.**
- C. The page layout assigned to these users is different than the Account owner.
- D. The users have a permission set that only allow Accounts in "Active" status.

Answer: B

Explanation:

Explanation

The most likely reason why some users cannot see the accounts shared with the public group is that their profiles do not have access to the account object. Sharing rules and public groups cannot grant access to an object that is not enabled by the profile. Option A is incorrect, since permission sets do not control record status. Option B is incorrect, since the role hierarchy does not affect sharing rules. Option D is incorrect, since page layouts do not affect visibility

NEW QUESTION # 53

Universal Containers (UC) has a mostly Private organization-wide default, as it is a core principle of UC to respect client data privacy. UC has implemented complex processes for granting access to Opportunity data. A few key members of the sales reporting team need to always be able to see, but not change, Opportunity data for all opportunities.

What should an architect recommend as an approach to meet these requirements?

- A. Create a permission set that grants the View All Data permission.
- **B. Create a permission set that grants the View All permission for Opportunity.**
- C. Give the View All Data permission to the Sales Reporting profile.

Answer: B

NEW QUESTION # 54

Universal Containers has a customer that meets criteria for two Enterprise Territory Management territories (Portugal and Southern Europe). What is necessary to assign opportunities to a territory for this account?

- **A. The territory with the highest territory type priority is automatically assigned to the opportunity.**
- B. Create an Apex class that implements Filter-Based Opportunity Territory Assignment.

- C. Create a process builder process that updates the territory field on the opportunity.
- D. Create a criteria-based sharing rule on the opportunity to assign it to a territory

Answer: A

Explanation:

Explanation

The territory with the highest territory type priority is automatically assigned to the opportunity when an account meets criteria for multiple territories⁴. Option A is incorrect, since creating a process builder process to update the territory field on the opportunity would be unnecessary and complex. Option C is incorrect, since creating an Apex class that implements Filter-Based Opportunity Territory Assignment would be an advanced and custom solution that is not required in this scenario. Option D is incorrect, since creating a criteria-based sharing rule on the opportunity to assign it to a territory would not work, as sharing rules do not assign territories⁵.

NEW QUESTION # 55

Universal Containers (UC) has 200 distributors that use Partner Community licenses.

Partners cannot see each other's data, but UC is also trying to give more visibility to data for certain individuals at a distributor.

HOW can an Architect give users in the partner user role access to all Case and Container records owned by any user, regardless of role, at the same distributor?

- A. Create a Permission Set granting "View All" permission to Case and Container records.
- B. Create sharing sets.
- C. Create an ownership-based sharing rule.
- **D. Give super user permission to the individual partner users.**

Answer: D

Explanation:

Explanation

To give users in the partner user role access to all Case and Container records owned by any user at the same distributor, an Architect can give super user permission to the individual partner users. Super user permission allows partner users to access data owned by other partner users belonging to the same account or below them in the role hierarchy. Creating an ownership-based sharing rule will not work, as it will share records based on the owner's role or territory, not their account. Creating sharing sets will not work, as they are only available for Customer Community licenses, not Partner Community licenses. Creating a Permission Set granting "View All" permission to Case and Container records will not work, as it will give access to all records in those objects, regardless of their owner or account.

NEW QUESTION # 56

Universal Containers (UC) wants to reduce the amount of redundant leads entered into the system. UC.. only edited/reassigned by the lead owner.

What organization-wide default (OWD) approach should be recommended to help UC implement these ..

- A. Implement a Public Read/Write OWD on Lead.
- **B. Implement a Public Read Only OWD on Lead.**
- C. Implement a private OWD on Lead.
- D. Implement a Public Read Only/Transfer OWD on Lead

Answer: B

NEW QUESTION # 57

.....
