ExamDiscuss Professional-Cloud-DevOps-Engineer Questions have helped thousands of candidates to achieve their professional dreams. Our Google Cloud Certified - Professional Cloud DevOps Engineer Exam (Professional-Cloud-DevOps-Engineer) exam dumps are useful for preparation and a complete source of knowledge. If you are a full-time job holder and facing problems finding time to prepare for the Google Professional-Cloud-DevOps-Engineer Exam Questions, you shouldn't worry more about it.

Our world is in the state of constant change and evolving. If you want to keep pace of the time and continually transform and challenge yourself you must attend one kind of Professional-Cloud-DevOps-Engineer certificate test to improve your practical ability and increase the quantity of your knowledge. Buying our Professional-Cloud-DevOps-Engineer Study Materials can help you pass the test smoothly. Our Professional-Cloud-DevOps-Engineer study materials have gone through strict analysis and verification by senior experts and are ready to supplement new resources at any time.

Free PDF 2026 Google - New Professional-Cloud-DevOps-Engineer Test Cram

Which one is your favorite way to prepare for the exam, PDF, online questions or using simulation of exam software? Fortunately,

the three methods will be included in our Professional-Cloud-DevOps-Engineer exam software provided by ExamDiscuss, so you can download the free demo of the three version. Choosing the right method to have your exam preparation is an important step to obtain Professional-Cloud-DevOps-Engineer Exam Certification. Certainly, we ensure that each version of Professional-Cloud-DevOps-Engineer exam materials will be helpful and comprehensive.

Google Cloud Certified - Professional Cloud DevOps Engineer Exam Sample Questions (Q23-Q28):

NEW QUESTION # 23
You support a web application that runs on App Engine and uses CloudSQL and Cloud Storage for data storage. After a short spike in website traffic, you notice a big increase in latency for all user requests, increase in CPU use, and the number of processes running the application. Initial troubleshooting reveals:
After the initial spike in traffic, load levels returned to normal but users still experience high latency.
Requests for content from the CloudSQL database and images from Cloud Storage show the same high latency.
No changes were made to the website around the time the latency increased.
There is no increase in the number of errors to the users.
You expect another spike in website traffic in the coming days and want to make sure users don't experience latency. What should you do?

- A. Upgrade the GCS buckets to Multi-Regional.
- B. Modify the App Engine configuration to have additional idle instances.
- C. Move the application from App Engine to Compute Engine.
- D. Enable high availability on the CloudSQL instances.

Answer: D

NEW QUESTION # 24
You recently migrated an ecommerce application to Google Cloud. You now need to prepare the application for the upcoming peak traffic season. You want to follow Google-recommended practices. What should you do first to prepare for the busy season?

- A. Migrate the application to Cloud Run, and use autoscaling.
- B. Create a Terraform configuration for the application's underlying infrastructure to quickly deploy to additional regions.
- C. Load test the application to profile its performance for scaling.
- D. Pre-provision the additional compute power that was used last season, and expect growth.

Answer: C

Explanation:
The first thing you should do to prepare your ecommerce application for the upcoming peak traffic season is to load test the application to profile its performance for scaling. Load testing is a process of simulating high traffic or user demand on your application and measuring how it responds. Load testing can help you identify any bottlenecks, errors, or performance issues that might affect your application during the busy season1. Load testing can also help you determine the optimal scaling strategy for your application, such as horizontal scaling (adding more instances) or vertical scaling (adding more resources to each instance)2.
There are different tools and methods for load testing your ecommerce application on Google Cloud, depending on the type and complexity of your application. For example, you can use Cloud Load Balancing to distribute traffic across multiple instances of your application, and use Cloud Monitoring to measure the latency, throughput, and error rate of your application3. You can also use Cloud Functions or Cloud Run to create serverless load generators that can simulate user requests and send them to your application4. Alternatively, you can use third-party tools such as Apache JMeter or Locust to create and run load tests on your application.
By load testing your ecommerce application before the peak traffic season, you can ensure that your application is ready to handle the expected load and provide a good user experience. You can also use the results of your load tests to plan and implement other steps to prepare your application for the busy season, such as migrating to a more scalable platform, creating a Terraform configuration for deploying to additional regions, or pre-provisioning additional compute power.

NEW QUESTION # 25
You encountered a major service outage that affected all users of the service for multiple hours. After several hours of incident management, the service returned to normal, and user access was restored. You need to provide an incident summary to relevant stakeholders following the Site Reliability Engineering recommended practices. What should you do first?

- A. Send the Incident State Document to all the stakeholders.
- B. Develop a post-mortem to be distributed to stakeholders.
- C. Call individual stakeholders lo explain what happened.
- D. Require the engineer responsible to write an apology email to all stakeholders.

Answer: B

NEW QUESTION # 26
Your application images are built using Cloud Build and pushed to Google Container Registry (GCR). You want to be able to specify a particular version of your application for deployment based on the release version tagged in source control. What should you do when you push the image?

- A. Supply the source control tag as a parameter within the image name.
- B. Use Cloud Build to include the release version tag in the application image.
- C. Use GCR digest versioning to match the image to the tag in source control.
- D. Reference the image digest in the source control tag.

Answer: B

NEW QUESTION # 27
Your company follows Site Reliability Engineering principles. You are writing a postmortem for an incident, triggered by a software change, that severely affected users. You want to prevent severe incidents from happening in the future. What should you do?

- A. Design a policy that will require on-call teams to immediately call engineers and management to discuss a plan of action if an incident occurs.
- B. Follow up with the employees who reviewed the changes and prescribe practices they should follow in the future.
- C. Identify engineers responsible for the incident and escalate to their senior management.
- D. Ensure that test cases that catch errors of this type are run successfully before new software releases.

Answer: D

NEW QUESTION # 28
.....

We offer you free demo for Professional-Cloud-DevOps-Engineer pdf dumps. You can check out the questions quality and usability of our training material before you buy. Google Professional-Cloud-DevOps-Engineer questions are written to the highest standards of technical accuracy with accurate answers. If you prepare for your exams using ExamDiscuss Professional-Cloud-DevOps-Engineer practice torrent, it is easy to succeed for your certification in the first attempt. Besides, we offer the money refund policy, in case of failure, you can ask for full refund.

Hot Professional-Cloud-DevOps-Engineer Questions: https://www.examdiscuss.com/Google/exam/Professional-Cloud-DevOps-Engineer/

Contrary to online courses free, with ExamDiscuss Hot Professional-Cloud-DevOps-Engineer Questions's products you get an assurance of success with money back guarantee, Google New Professional-Cloud-DevOps-Engineer Test Cram More or less, this study torrent will show some real questions of final exam for you or even almost all exam questions, Google New Professional-Cloud-DevOps-Engineer Test Cram Before you buy the dumps, if you don't know our site well, such as some guarantees, you could visit the site pages and look at the information first or get online conversation to know more, We believe that one of the most important things you care about is the quality of our Professional-Cloud-DevOps-Engineer exam materials, but we can ensure that the quality of it won't let you down.

As a leading provider of the IT certification study guidance and Professional-Cloud-DevOps-Engineer exam dump, we always remember our responsibility is to provide latest exam questions and answers with the most accurate answers.

Validate Your Skills with Google Professional-Cloud-DevOps-Engineer Exam Dumps

Government Threats to Privacy, Contrary to online **New Professional-Cloud-DevOps-Engineer Test Cram** courses free, with ExamDiscuss's products you get an assurance of success with moneyback guarantee, More or less, this study torrent Professional-Cloud-DevOps-Engineer Exam Topics will show some real questions of final exam for you or even almost all exam questions.

Before you buy the dumps, if you don't know our site well, such Hot Professional-Cloud-DevOps-Engineer Questions as some guarantees, you could visit the site pages and look at the information first or get online conversation to know more.

We believe that one of the most important things you care about is the quality of our Professional-Cloud-DevOps-Engineer Exam Materials, but we can ensure that the quality of it won't let you down.

Elementary Professional-Cloud-DevOps-Engineer practice engine as representatives in the line are enjoying high reputation in the market rather than some useless practice materials which cash in on your worries.
