2026 Latest ActualTorrent CAS-005 PDF Dumps and CAS-005 Exam Engine Free Share: [https://drive.google.com/open?id=1pCXmIw3mchBDx4s\\_CtjYyYaUkExCRf6w](https://drive.google.com/open?id=1pCXmIw3mchBDx4s_CtjYyYaUkExCRf6w)

Unlike some products priced heavily and too heavy to undertake, our CAS-005 practice materials are reasonable in price. So our CAS-005 guide dumps are financially desirable. On the other side, Products are purchasable, knowledge is not, and our CAS-005 practice materials can teach you knowledge rather than charge your money. As well as free demos of CAS-005 real exam for your reference, you can download them before purchase.

In order to protect the vital interests of each IT certification exams candidate, ActualTorrent provides high-quality CompTIA CAS-005 Exam Training materials. This exam material is specially developed according to the needs of the candidates. It is researched by the IT experts of ActualTorrent. Their struggle is not just to help you pass the exam, but also in order to let you have a better tomorrow.

## Quiz CompTIA - Accurate Exam CAS-005 Vce Format

Each product has a trial version and our products are without exception, literally means that our CAS-005 guide torrent can provide you with a free demo when you browse our website of CAS-005 prep guide, and we believe it is a good way for our customers to have a better understanding about our products in advance. Moreover if you have a taste ahead of schedule, you can consider whether our CAS-005 Exam Torrent is suitable to you or not, thus making the best choice. What's more, if you become our regular customers, you can enjoy more membership discount and preferential services.

## CompTIA SecurityX Certification Exam Sample Questions (Q288-Q293):

### NEW QUESTION # 288

An organization has noticed an increase in phishing campaigns utilizing typosquatting. A security analyst needs to enrich the data for commonly used domains against the domains used in phishing campaigns. The analyst uses a log forwarder to forward network logs to the SIEM. Which of the following would allow the security analyst to perform this analysis?

- A. Implement a dashboard on the SIEM that shows the percentage of traffic by domain.
- B. Develop a query that filters out all matching domain names.
- C. Create a parser that matches domains.
- D. Use a cron job to regularly update and compare domains.

**Answer: A**

Explanation:

Enriching data to compare domains requires actionable visibility. Let's analyze:

A). Cron job: Automates updates but doesn't analyze in the SIEM.

B). Parser: Processes logs but doesn't provide comparison insights.

C). Filter query: Excludes matches, opposite of enrichment.

Reference: CompTIA SecurityX (CAS-005) objectives, Domain 2: Security Operations, covering SIEM analysis.

### NEW QUESTION # 289

A developer needs to improve the cryptographic strength of a password-storage component in a web application without completely replacing the crypto-module. Which of the following is the most appropriate technique?

- A. Key encryption
- B. Key stretching
- C. Key rotation
- D. Key splitting
- E. Key escrow

**Answer: B**

Explanation:

The most appropriate technique to improve the cryptographic strength of a password-storage component in a web application without completely replacing the crypto-module is key stretching. Here's why:

Enhanced Security: Key stretching algorithms, such as PBKDF2, bcrypt, and scrypt, increase the computational effort required to derive the encryption key from the password, making brute-force attacks more difficult and time-consuming.

Compatibility: Key stretching can be implemented alongside existing cryptographic modules, enhancing their security without the need for a complete overhaul.

Industry Best Practices: Key stretching is a widely recommended practice for securely storing passwords, as it significantly improves resistance to password-cracking attacks.

### NEW QUESTION # 290

A security officer performs due diligence activities before implementing a third-party solution into the enterprise environment. The security officer needs evidence from the third party that a data subject access request handling process is in place. Which of the following is the security officer most likely seeking to maintain compliance?

- A. Privacy regulations
- B. E-discovery requirements
- C. Certification requirements
- D. Information security standards
- E. Reporting frameworks

**Answer: A**

Explanation:

The best answer is C. Privacy regulations . A data subject access request process exists to support an individual's right to access their personal data. Regulators and official privacy guidance define this as a core privacy right. The UK ICO explains that the "right of access, commonly referred to as subject access, gives individuals the right to obtain a copy of their personal data", and Article 15 GDPR establishes the same right in law. Because the security officer is asking a third party to prove it can handle these requests, the officer is clearly validating compliance with privacy law and related data protection obligations.

This also aligns with CompTIA SecurityX's GRC focus on compliance requirements, program documentation, and data governance. A third party that processes personal data for the enterprise must be able to respond appropriately to access requests from data subjects, so confirming that process is a due diligence activity tied to regulatory privacy compliance rather than e-discovery, certification, or generic reporting frameworks.

Why the other options are incorrect:

A). Information security standards may require good practices, but DSAR handling is specifically about privacy rights. B. E-discovery requirements relate to legal discovery and litigation processes, not an individual's privacy access rights. D. Certification requirements and E. Reporting frameworks are not the primary reason an organization must support subject access requests. The clearest and most accurate answer is privacy regulations.

### NEW QUESTION # 291

The security team is looking into aggressive bot behavior that is resulting in performance issues on the web server. After further investigation, the security engineer determines that the bot traffic is legitimate. Which of the following is the best course of action to reduce performance issues without allocating additional resources to the server?

- A. Configure the WAF to rate-limit bot traffic.
- **B. Update robots.txt to slow down the crawling speed.**
- C. Monitor legitimate SEO bot traffic for abnormalities.
- D. Block all bot traffic using the IPS.

**Answer: B**

Explanation:

robots.txt provides a way to politely request that well-behaved bots reduce their crawling speed.

The Crawl-delay directive can be used to specify a delay (in seconds) between successive requests. This approach directly addresses the performance issue by reducing the load caused by the bots without completely blocking them or requiring complex WAF configurations.

### NEW QUESTION # 292

A security analyst received a report that an internal web page is down after a company-wide update to the web browser. Given the following error message:

□ Which of the following is the best way to fix this issue?

- A. Blocking all non-essential ports
- B. Disabling all deprecated ciphers
- C. Rewriting any legacy web functions
- **D. Discontinuing the use of self-signed certificates**

**Answer: D**

Explanation:

The error message "NET:ERR\_CERT\_WEAK\_SIGNATURE\_ALGORITHM" indicates that the web browser is rejecting the certificate because it uses a weak signature algorithm. This commonly happens with self-signed certificates, which often use outdated or insecure algorithms.

Why Discontinue Self-Signed Certificates?

Security Compliance: Modern browsers enforce strict security standards and may reject certificates that do not comply with these standards.

Trusted Certificates: Using certificates from a trusted Certificate Authority (CA) ensures compliance with security standards and is

less likely to be flagged as insecure.

Weak Signature Algorithm: Self-signed certificates might use weak algorithms like MD5 or SHA-1, which are considered insecure.

Other options do not address the specific cause of the certificate error:

A: Rewriting legacy web functions: Does not address the certificate issue.

B: Disabling deprecated ciphers: Useful for improving security but not related to the certificate error.

C: Blocking non-essential ports: This is unrelated to the issue of certificate validation.

## NEW QUESTION # 293

.....

This is a wise choice, after using our CAS-005 training materials, you will realize your dream of a promotion because you deserve these reports and your efforts will be your best proof. Therefore, when you are ready to review the exam, you can fully trust our products, choose our learning materials. If you don't want to miss out on such a good opportunity, buy it quickly. Thus, users do not have to worry about such trivial issues as typesetting and proofreading, just focus on spending the most practice to use our CAS-005 Learning Materials. After careful preparation, I believe you will be able to pass the exam.
