OFİS OTOMASYON TEKNOLOJİLERİNİN EVRİMİ VE YENİ İŞ DÜNYASI
ÜZERİNDEKİ ETKİLERİ

Ramazan GÖRAL[*]

ÖZET

Önceleri ofis sistemleri dendiğinde akla gelen eşyalar masa, sandalye, daktilo makinesi ve telefon iken fotokopi makinesinin icat edilmesi ile dokümanların çoğaltılması söz konusu olmuştur. Zamanla kişisel bilgisayarların da ofislere girmesi ve bilgisayarların ağ ortamında birbirleri ile iletişim kurması sayesinde diğer ofis ekipmanlarının da ortak kullanımı söz konusu olmuştur. Herkesin ofis içinde ortak kullandığı çeşitli büyüklüklerdeki ofis araçları yıldan yıla değişik özelliklere sahip olarak gelişmiştir. Önceleri analog olarak çalışan, bilgisayar ile bağlantı kuramayan ve ayrı birer makine olan fotokopi, yazıcı, tarayıcı ve faks makineleri ilerleyen teknoloji ile beraber gelişerek ağ ortamında çalışan ürünler haline gelmişlerdir. Bu gelişmelerin son halkası internetin ve ağ teknolojilerinin sunduğu olanaklar sayesinde bilgisayarlar birbirleri ile mekandan bağımsız iletişim kurmaya başlamışlardır. İnternet sayesinde artan bilginin gruplanması ve sınıflandırılması sorunu dijital bilgi yönetimi kavramını ortaya çıkarmıştır. Çünkü bilgi, geleneksel yöntemlerle çözülemez hale gelmiştir.

Geniş kapsamlı teknolojiler, uygulanmaları esnasında sorunları beraberlerinde getirseler de bilgi endüstrisinin artan güvenlik ve entegrasyon

If you want to enter a better company and double your salary, a certificate for this field is quite necessary. We can offer you such opportunity. SPLK-2003 study guide materials of us are compiled by experienced experts, and they are familiar with the exam center, therefore the quality can be guaranteed. In addition, SPLK-2003 Learning Materials have certain quantity, and it will be enough for you to pass the exam and obtain the corresponding certificate enough. We have a professional service stuff team, if you have any questions about SPLK-2003 exam materials, just contact us.

Do you feel anxiety about your coming SPLK-2003 exam test? Do you want to find the valid and latest material for the SPLK-2003 actual test? Dumpkiller will help you and bring you to the right direction. Firstly, SPLK-2003 free demo is allowable for you to try before you buy. Besides, we will offer you the benefits of 365 days free update. SO, even if the SPLK-2003 Actual Test is changed frequently, you do not worry about it, because our SPLK-2003 training material is updated according to the actual test and can ensure you pass.

SPLK-2003 Reliable Test Braindumps - SPLK-2003 New Real Test

Success in the Splunk Phantom Certified Admin (SPLK-2003) certification exam helps people update their skills. Many aspirants don't find updated Splunk SPLK-2003 practice test questions and fail the final test. This failure in the Splunk SPLK-2003 Exam

leads to a loss of money and time. If you are also planning to attempt the Splunk Phantom Certified Admin (SPLK-2003) exam and are confused about where to prepare yourself for it then you are at the right place.

Splunk Phantom Certified Admin Exam is an advanced-level certification that requires a deep understanding of the Splunk Phantom platform. SPLK-2003 Exam covers a variety of topics, including architecture, deployment, configuration, automation, integration, and troubleshooting. It is a 90-minute exam that consists of 60 multiple-choice questions. The passing score for the exam is 70%, and it is available in multiple languages.

Splunk Phantom Certified Admin Sample Questions (Q49-Q54):

NEW QUESTION # 49
In this image, which container fields are searched for the text "Malware"?

- A. Event Name, Notes, Comments.
- B. Event Name or ID.
- C. Event Name and Artifact Names.

Answer: C

NEW QUESTION # 50
Which of the following is a step when configuring event forwarding from Splunk to Phantom?

- A. Map CEF to CIM fields.
- B. Map CIM to CEF fields.
- C. Create a Splunk alert that uses the event_forward.py script to send events to Phantom.
- D. Create a saved search that generates the JSON for the new container on Phantom.

Answer: C

Explanation:
A step when configuring event forwarding from Splunk to Phantom is to create a Splunk alert that uses the event_forward.py script to send events to Phantom. This script will convert the Splunk events to CEF format and send them to Phantom as containers. The other options are not valid steps for event forwarding.
See Forwarding events from Splunk to Phantom for more details.
Configuring event forwarding from Splunk to Phantom typically involves creating a Splunk alert that leverages a script (like event_forward.py) to automatically send triggered event data to Phantom. This setup enables Splunk to act as a detection mechanism that, upon identifying notable events based on predefined criteria, forwards these events to Phantom for further orchestration, automation, and response actions. This integration streamlines the process of incident management by connecting Splunk's powerful data analysis capabilities with Phantom's orchestration and automation framework.

NEW QUESTION # 51
Which app allows a user to run Splunk queries from within Phantom?

- A. Splunk App for Phantom Reporting.
- B. Splunk App for Phantom?
- C. The Integrated Splunk/Phantom app.
- D. Phantom App for Splunk.

Answer: D

Explanation:
Explanation
The Phantom App for Splunk allows a user to run Splunk queries from within Phantom. This app provides actions such as run query, ingest events, and save search, which enable the user to interact with Splunk from Phantom playbooks or the Phantom UI. The other apps are not relevant for this use case. The Splunk App for Phantom is used to send data from Splunk to Phantom. The Integrated Splunk/Phantom app is a deprecated app that was replaced by the Splunk App for Phantom. The Splunk App for Phantom Reporting is used to generate reports on Phantom activity from Splunk. Reference, page 1.

NEW QUESTION # 52

When working with complex datapaths, which operator is used to access a sub-element inside another element?

- A. : (colon)
- B. * (asterisk)
- C. | (pipe)
- D. . (dot)

Answer: D

Explanation:

When working with complex data paths in Splunk SOAR, particularly within playbooks, the dot (.) operator is used to access sub-elements within a larger data structure. This operator allows for the navigation through nested data, such as dictionaries or objects within JSON responses, enabling playbook actions and decision blocks to reference specific pieces of data within the artifacts or action results. This capability is crucial for extracting and manipulating relevant information from complex data sets during incident analysis and response automation.

NEW QUESTION # 53

How can parent and child playbooks pass information to each other?

- A. The parent must create a new artifact in the event named return_xxx, and the child must return values by creating artifacts with the naming convention arg_xxx.
- B. The parent can pass arguments to the child when called, but the child can only pass values back as new artifacts in the event.
- C. The parent can pass arguments to the child when called, and the child can return values from the end block.
- D. The parent must create a new artifact in the event named arg_xxx, and the child must return values by creating artifacts with the naming convention return_xxx.

Answer: C

Explanation:

In Splunk SOAR, parent and child playbooks can pass information between each other using arguments. The parent playbook can pass specific arguments to the child playbook when it is called, enabling the child playbook to utilize these values in its execution. Once the child playbook finishes its execution, it can return values through the end block. This mechanism allows for efficient and structured communication between parent and child playbooks, enabling complex, multi-step automation workflows.

Other options are incorrect because creating artifacts with specific naming conventions is not necessary for passing information between playbooks, and artifacts are not used for argument or result passing between playbooks in this manner.
