Efficient Mule-101 Latest Exam Book – Pass Mule-101 First Attempt

If you study with our Mule-101 exam questions, then you will be surprised to find that our Mule-101 training material is well-written and excellently-organised. That is because our experts fully considered the differences in learning methods and Mule-101 examination models between different majors and eventually formed a complete review system. It will help you to Pass Mule-101 Exam successfully after a series of exercises, correction of errors, and self-improvement. Our Mule-101 exam questions contain everything you need to pass the exam.

Salesforce Certified MuleSoft Integration Foundations Sample Questions

(Q46-Q51):

NEW QUESTION # 46

A team has completed the build and test activities for a Mule application that implements a System API for its application network. Which Anypoint Platform component should the team now use to both deploy and monitor the System API implementation?

- A. Design Center
- B. Anypoint Exchange
- C. API Manager
- **D. Runtime Manager**

Answer: D

Explanation:

Runtime Manager: This is the interface within the Anypoint Control Plane used to manage the lifecycle of deployments.

Capabilities:

Deploy: You upload the JAR file here to deploy it to CloudHub, Runtime Fabric, or On-Prem servers.

Monitor: Once deployed, it provides dashboards for CPU usage, Memory usage, and status (Started/Stopped).

Why others are incorrect:

API Manager: Manages policies (security) and gateways, not the deployment of the application artifact itself.

Design Center: For creating the app, not deploying it.

NEW QUESTION # 47

A developer is examining the responses from a RESTful web service that is compliant with the Hypertext Transfer Protocol (HTTP/1.1) as defined by the Internet Engineering Task Force (IETF). 13 (The question asks to identify the code class for success)

- A. 3xx
- **B. 2xx**
- C. 4xx
- D. 5xx

Answer: B

Explanation:

Comprehensive and Detailed Explanation:

HTTP Status Codes: Understanding these is fundamental to MuleSoft integration.

2xx (Success - Answer B): The request was received, understood, and accepted. (e.g., 200 OK, 201 Created, 202 Accepted).

3xx (Redirection): Further action needs to be taken to complete the request (e.g., 301 Moved Permanently).

4xx (Client Error): The request contains bad syntax or cannot be fulfilled (e.g., 400 Bad Request, 401 Unauthorized, 404 Not Found).

5xx (Server Error): The server failed to fulfill an apparently valid request (e.g., 500 Internal Server Error, 502 Bad Gateway).

Context: When a Mule flow makes an HTTP Request, it checks these status codes to determine if the On Error scope should be triggered. By default, 4xx and 5xx trigger errors; 2xx indicates success.

NEW QUESTION # 48

Which key DevOps practice and associated Anypoint Platform component should a MuleSoft Integration team adopt to improve delivery quality?

- A. Passive monitoring with Anypoint Monitoring
- B. Continuous design with API Designer
- **C. Automated testing with MUnit**
- D. Manual testing with Anypoint Studio

Answer: C

Explanation:

DevOps & Quality: A core tenet of DevOps is CI/CD (Continuous Integration/Continuous Delivery). To achieve high quality in a fast-paced CI/CD pipeline, testing must be automated, not manual.

MUnit: This is the native testing framework for Mule applications. It allows developers to write unit and integration tests that run

automatically during the build process (e.g., via Maven).¹² Why others are incorrect:³⁴ Manual testing (B): Is slow, error-prone, and not a "DevOps" scaling practice.⁵⁶ Passive monitoring (A): happens after deployment (Operations), whereas MUnit ensures quality⁷ during development/build.

NEW QUESTION # 49

An IT integration delivery team begins a project by gathering all of the requirements, and proceeds to execute the remaining project activities as sequential, non-repeating phases. Which IT project delivery methodology is this team following?

- A. Scrum
- **B. Waterfall**
- C. Kanban
- D. Agile

Answer: B

Explanation:

Waterfall Methodology: This traditional approach is characterized by a linear, sequential design process.²

Key Characteristics:

Upfront Requirements: All requirements are gathered at the very beginning (as stated in the question).

Sequential Phases: Analysis -> Design -> Implementation -> Testing -> Deployment.

Non-repeating: You typically do not go back to a previous phase once it is signed off.

Why others are incorrect: Agile, Scrum, and Kanban are iterative methodologies that encourage repeating cycles (sprints) and evolving requirements, which is the opposite of the scenario described.

NEW QUESTION # 50

In preparation for a digital transformation initiative, an organization is reviewing related IT integration projects that failed for various reasons.

- A. Following an Agile delivery methodology
- B. Spending too much time on enablement
- **C. Lack of alignment around business outcomes**
- D. Reliance on an Integration-Platform-as-a-Service (iPaaS)

Answer: C

Explanation:

MuleSoft Catalyst: This is MuleSoft's delivery methodology. It identifies that integration projects often fail not due to technology, but due to a lack of clear strategy and alignment.

Business Outcomes: A primary cause of failure is when IT builds projects in isolation without understanding the business value or specific outcomes (KPIs) required by the organization.⁵

Why others are incorrect:

Agile (C): Is generally recommended/beneficial.

Enablement (B): Is a core pillar of success (C4E), not a cause of failure.

NEW QUESTION # 51

.....

You can easily use the PDF format on your tablets, laptops, and smartphones. It means you can save your free time and read Actual Mule-101 PDF Questions from any place. So, get PDF questions, study it properly and have faith in yourself. You can reach new heights and prove yourself to those who used to think that you are not worth competing with them.
