NEW QUESTION # 58

Which of the following features of Puppet Labs is described as the ability to locate, identify, and group cloud nodes?

- A. Discovery
- B. Insight
- C. Delivery
- D. Provisioning

Answer: A

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In the context of SRE tooling and automation, configuration management platforms like Puppet support large- scale infrastructure reliability by enabling consistency, repeatability, and automation. Puppet's Discovery capability allows engineers to automatically locate, identify, classify, and group cloud nodes or infrastructure resources. Although not directly from Google's SRE Book, Discovery aligns with SRE principles of reducing toil and enabling scalable automation. SRE emphasizes "automating away the manual work of locating and managing infrastructure at scale." (SRE Book - Chapter: Eliminating Toil). Puppet Discovery does precisely this by automatically scanning environments, detecting nodes, and providing metadata to group or manage them.

Option A (Provisioning) refers to creating infrastructure, not identifying it.

Option B (Delivery) relates to CI/CD processes.

Option D (Insight) relates to analytics and reporting, not node identification.

Therefore, C. Discovery is correct as it directly represents the capability described.

NEW QUESTION # 59

 - B. 2 and 3
 - C. 1 and 2
 - D. 1 and 4

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Modern SRE-aligned organizations use small, cross-functional product teams capable of owning design, development, testing, and operational reliability. The SRE Book emphasizes: "Effective service ownership arises from small, autonomous teams with diverse skillsets and strong collaboration habits." These teams share responsibility, encourage feedback, and maintain open communication to meet reliability goals.

Option A correctly identifies the two positive characteristics:

- * Small and collaborative
- * Cross-functional skillsets

Options 3 and 4 represent dysfunctional behaviors-SRE literature explicitly discourages responsibility silos and discouraging feedback, as these reduce reliability and slow incident learning.

Thus, A is the correct answer.
