

CIS-PA Pdf Free | Reliable CIS-PA Dumps Book

We can confidently say that Our CIS-PA training quiz will help you. First of all, our company is constantly improving our products according to the needs of users. If you really want a learning product to help you, our CIS-PA study materials are definitely your best choice, you can't find a product more perfect than it. Second, our CIS-PA learning questions have really helped a lot of people. Looking at the experiences of these seniors, I believe that you will definitely be more determined to pass the CIS-PA exam.

ServiceNow CIS-PA Exam Syllabus Topics:

Topic	Details
Topic 1	• Perform Diagnostics and Troubleshooting
Topic 2	• Configure Breakdowns and Breakdown Sources: This section covers setting up breakdowns to analyze indicators across different dimensions, including breakdown mappings, matrices, exclusions, scripted mappings, and bucket groups.
Topic 3	• Data Visualization: This section focuses on presenting data through widgets, interactive filters, appropriate visualizations, dashboards, and analyzing data using Analytics Hub and KPI Details.
Topic 4	• Architecture and Deployment: This domain covers the foundational components of the Performance Analytics solution and the proper deployment sequence in ServiceNow environments.

Reliable ServiceNow CIS-PA Dumps Book, CIS-PA Latest Exam Forum

Our Pass4training's CIS-PA exam training material is the leader of CIS-PA certification exam. Our CIS-PA exam training materials is the result of Pass4training's experienced IT experts with constant exploration, practice and research for many years. It has high accuracy and wide coverage. If you buy our CIS-PA Dumps PDF, we guarantee that we will provide one year free renewal service.

ServiceNow Certified Implementation Specialist - Platform Analytics Sample Questions (Q50-Q55):

NEW QUESTION # 50

Which property indicates the recommended evaluation date for a Target?

- A. Improvement Date
- B. End Date
- C. Review Date
- D. Baseline Date

Answer: C

Explanation:

In Platform Analytics, a Target defines the desired performance level for an indicator. The Review Date property specifies the recommended date to evaluate progress toward that target. This date is used for governance and performance review purposes, helping stakeholders determine when to assess whether the indicator is trending appropriately toward its goal. The Baseline Date marks the starting point for measurement, while the End Date defines when the target expires or is no longer valid. The Improvement Date indicates when improvement efforts begin, not when performance should be evaluated. ServiceNow documentation clearly identifies the Review Date as the point in time when the target's effectiveness and achievement should be assessed, making option D the correct answer.

NEW QUESTION # 51

What specifies the base table and field used to uniquely identify elements in a Breakdown Source?

- A. Facts table and Sys ID field
- B. Manual Indicator and Scoresheet
- C. Indicator Configuration and Target Value
- D. Related List Conditions and Field Labels

Answer: A

Explanation:

A Breakdown Source relies on the Facts table and a unique identifier field (typically the Sys ID) to define how breakdown elements are generated and linked to indicator scores. The Facts table specifies where the breakdown data originates, while the Sys ID field uniquely identifies each breakdown element.

Related list conditions and labels do not define uniqueness. Indicator configuration and targets are unrelated to breakdown structure. Manual indicators and scoresheets are not involved in breakdown sourcing.

ServiceNow documentation clearly states that the Facts table and unique identifier are foundational to Breakdown Source configuration, making option B the correct answer.

NEW QUESTION # 52

Breakdown element security is configured in the properties of which object?

- A. Manual Breakdown
- B. Breakdown Source
- C. Automated Breakdown
- D. Automated Indicator

Answer: C

Explanation:

Breakdown element security determines which users are allowed to see specific breakdown elements (such as certain categories or values) when viewing analytics data. In Platform Analytics, this security is configured directly on the Automated Breakdown record. Automated Breakdowns include properties that allow administrators to define element-level access control, typically by specifying roles that are required to view certain breakdown elements. This ensures sensitive analytics data is only visible to authorized users. The Breakdown Source defines how data is mapped and categorized but does not control visibility. Automated Indicators control score collection and aggregation, not breakdown element security. Manual Breakdowns are static and do not support dynamic element security in the same way.

ServiceNow documentation explicitly states that breakdown element security settings—such as restricting elements by role—are part of the Automated Breakdown configuration, making option D the correct answer.

NEW QUESTION # 53

Which configuration confirms that an Automated Breakdown is using a Bucket Group?

- A. The Facts table of the Breakdown is set to [pa_buckets]
- B. The Facts table of the Breakdown Source is set to [pa_buckets]
- C. The Related list conditions of the Breakdown Source identify the Bucket Groups
- D. The Default elements filter of the Breakdown specifies the Bucket Groups

Answer: B

Explanation:

An Automated Breakdown is confirmed to be using a Bucket Group when the Facts table of the Breakdown Source is set to Bucket [pa_buckets]. Bucket Groups define how numeric or duration values are grouped, but the actual bucketed analytics data is stored in the pa_bucketstable during data collection.

The Breakdown Source is responsible for defining where the breakdown facts originate. If its Facts table is pa_buckets, this indicates that the breakdown is based on bucketed values generated by a Bucket Group. The Breakdown record itself does not define the facts table, and default element filters or related list conditions do not establish the use of bucket data.

ServiceNow Platform Analytics documentation clearly states that all bucket-based breakdowns must reference pa_buckets at the Breakdown Source level, making option C the correct and definitive answer.

NEW QUESTION # 54

Who is the In-Line Dashboard Editor intended for?

- A. Business users
- B. Developers
- C. External contractors
- D. System administrators

Answer: A

Explanation:

The In-Line Dashboard Editor is designed primarily for business users who need to make quick, simple adjustments to dashboards without deep technical knowledge. It allows users to edit layouts, move widgets, and make basic configuration changes directly from the dashboard view.

System administrators and developers typically use the full dashboard configuration interfaces for advanced customization, scripting, or governance. External contractors are not a defined target audience for this feature.

ServiceNow documentation emphasizes that the in-line editor empowers non-technical users to personalize dashboards safely and efficiently, making option A the correct answer.

NEW QUESTION # 55

.....

Now we can say that the ServiceNow CIS-PA exam practice questions are real, valid, and updated as per the Certified Implementation Specialist - Platform Analytics exam syllabus. So rest assured that with the ServiceNow CIS-PA Exam Practice test questions you can ace your exam preparation quickly and be ready to perform well in the final ServiceNow CIS-PA certification exam.
