Marvelous Associate-Cloud-Engineer PDF Guide | Easy To Study and Pass Exam at first attempt & First-Grade Associate-Cloud-Engineer: Google Associate Cloud Engineer Exam

Many learners feel that they have choice phobia disorder whiling they are choosing reliable Associate-Cloud-Engineer test guide on the internet. If so you can choose our Associate-Cloud-Engineer certification materials. We are the leading position in this field and our company is growing faster and faster because of our professional and high pass-rate Associate-Cloud-Engineer Exam Torrent materials. Every year more than thousands of candidates choose our reliable Associate-Cloud-Engineer test guide materials we help more than 98% of candidates clear exams, we are proud of our Associate-Cloud-Engineer exam questions.

Google Associate Cloud Engineer Exam Sample Questions (Q300-Q305):

NEW QUESTION # 300
A team of data scientists infrequently needs to use a Google Kubernetes Engine (GKE) cluster that you manage. They require GPUs for some long-running, non-restartable jobs. You want to minimize cost. What should you do?

- A. Create a node pool with preemptible VMs and GPUs attached to those VMs.
- B. Create a node pool of instances with GPUs, and enable autoscaling on this node pool with a minimum size of 1.
- C. Enable node auto-provisioning on the GKE cluster.
- D. Create a VerticalPodAutscaler for those workloads.

Answer: A

NEW QUESTION # 301

You're about to deploy your team's App Engine application. They're using the Go runtime with a Standard Environment. Which command should you use to deploy the application?

- A. gcloud app apply app.yaml
- B. gcloud app-engine deploy app.yaml
- C. gcloud app deploy app.yaml
- D. gcloud app-engine apply app.yaml

Answer: C

NEW QUESTION # 302

Your team maintains the infrastructure for your organization. The current infrastructure requires changes. You need to share your proposed changes with the rest of the team. You want to follow Google's recommended best practices. What should you do?

- A. Apply the change in a development environment, run gcloud compute instances list, and then save the output in a shared Storage bucket.
- B. Use Deployment Manager templates to describe the proposed changes and store them in Cloud Source Repositories.
- C. Apply the change in a development environment, run gcloud compute instances list, and then save the output in Cloud Source Repositories.
- D. Use Deployment Manager templates to describe the proposed changes and store them in a Cloud Storage bucket.

Answer: B

NEW QUESTION # 303

You want to add a new auditor to a Google Cloud Platform project. The auditor should be allowed to read, but not modify, all project items.
How should you configure the auditor's permissions?

- A. Select the built-in IAM project Viewer role. Add the user's account to this role.
- B. Select the built-in IAM service Viewer role. Add the user's account to this role.
- C. Create a custom role with view-only service permissions. Add the user's account to the custom role.
- D. Create a custom role with view-only project permissions. Add the user's account to the custom role.

Answer: A

Explanation:
Reference:
The primitive role roles/viewer provides read access to all resources in the project. The permissions in this role are limited to Get and list access for all resources. As we have an out of the box role that exactly fits our requirement, we should use this.
Ref: https://cloud.google.com/resource-manager/docs/access-control-proj It is advisable to use the existing GCP provided roles over creating custom roles with similar permissions as this becomes a maintenance overhead. If GCP modifies how permissions are handled or adds/removes permissions, the default GCP provided roles are automatically updated by Google whereas if they were custom roles, the responsibility is with us and this adds to the operational overhead and needs to be avoided.

NEW QUESTION # 304

You host a static website on Cloud Storage. Recently, you began to include links to PDF files on this site.
Currently, when users click on the links to these PDF files, their browsers prompt them to save the file onto their local system.
Instead, you want the clicked PDF files to be displayed within the browser window directly, without prompting the user to save the file locally. What should you do?

- A. Add a label to the storage bucket with a key of Content-Type and value of application/pdf.
- B. Enable 'Share publicly' on the PDF file objects.
- C. Enable Cloud CDN on the website frontend.
- D. Set Content-Type metadata to application/pdf on the PDF file objects.

Answer: D
