

100% Pass Quiz 2026 ISA ISA-IEC-62443: ISA/IEC 62443 Cybersecurity Fundamentals Specialist–High Pass-Rate Valid Test Registration

P.S. Free 2025 ISA ISA-IEC-62443 dumps are available on Google Drive shared by ITExamSimulator:
<https://drive.google.com/open?id=1QMk7zaJcu2DY6etdGtIzm9U2f7rJiDuB>

Today is the right time to advance your career. Yes, you can do this easily. Just need to pass the ISA-IEC-62443 certification exam. Are you ready for this? If yes then get registered in ISA ISA-IEC-62443 certification exam and start preparation with top-notch ISA-IEC-62443 Exam Practice questions today. These ISA-IEC-62443 questions are available at ITExamSimulator with up to 1 year of free updates. Download ITExamSimulator ISA-IEC-62443 exam practice material demo and check out its top features.

In the process of using ISA-IEC-62443 study question if the clients encounter the difficulties, the obstacles and the doubts they could contact our online customer service staff in the whole day. Our service team will update the ISA-IEC-62443 certification file periodically and provide one-year free update. Have known these advantages you may be curious to further understand the detailed information about our ISA-IEC-62443 training braindump and we list the detailed characteristics and functions of our ISA-IEC-62443 exam questions on the web for you to know.

100% Pass 2026 ISA ISA-IEC-62443: ISA/IEC 62443 Cybersecurity Fundamentals Specialist Latest Valid Test Registration

Actually, most people do not like learning the boring knowledge. It is hard to understand if our brain rejects taking the initiative. Now, our company has researched the ISA-IEC-62443 practice guide, a kind of high efficient learning tool. Firstly, we have deleted all irrelevant knowledge, which decreases your learning pressure. Secondly, the displays of the ISA-IEC-62443 Study Materials are varied to cater to all fo your different study interest and hobbies. It is interesting to study with our ISA-IEC-62443 exam questions.

ISA/IEC 62443 Cybersecurity Fundamentals Specialist Sample Questions (Q91-Q96):

NEW QUESTION # 91

Which is a reason for

and physical security regulations meeting a mixed resistance?

Available Choices (select all choices that are correct)

- A. Regulations contain only informative elements.
- B. Cybersecurity risks can best be managed individually and in isolation.
- C. There are a limited number of enforced cybersecurity and physical security regulations.
- D. Regulations are voluntary documents.

Answer: C

Explanation:

Cybersecurity and physical security regulations are intended to provide guidance and requirements for protecting industrial control systems from various threats and risks. However, these regulations may face mixed resistance from different stakeholders for various reasons. One of the reasons is that there are a limited number of enforced cybersecurity and physical security regulations, especially at the international level. This means that some regions or countries may have more stringent or comprehensive regulations than others, creating inconsistencies and challenges for cross-border cooperation and compliance. Moreover, some regulations may be outdated or not aligned with the current best practices and standards, such as ISA/IEC

62443, which may limit their effectiveness and applicability. Therefore, some organizations may prefer to follow voluntary standards or frameworks, such as ISA/IEC 62443, rather than mandatory regulations, as they may offer more flexibility and adaptability to the specific needs and contexts of each industrial control system. NEW QUESTION # 92

Which is the PRIMARY objective when defining a security zone?

Available Choices (select all choices that are correct)

- A. All assets in the zone must share the same security requirements.
- B. All assets in the zone must be physically located in the same area.
- C. All assets in the zone must be at the same level in the Purdue model.
- D. All assets in the zone must be from the same vendor.

Answer: A

Explanation:

According to the ISA/IEC 62443-3-2 standard, a security zone is a grouping of systems and components based on their functional, logical, and physical relationship that share common security requirements. The primary objective of defining a security zone is to apply a consistent level of protection to the assets within the zone, based on their criticality and risk assessment. A security zone may contain assets from different vendors, different levels in the Purdue model, or different physical locations, as long as they have the same security requirements. A security zone may also be subdivided into subzones, if there are different security requirements within the zone. A conduit is a logical or physical grouping of communication channels connecting two or more zones that share common security requirements.

NEW QUESTION # 93

Whose responsibility is it to determine the level of risk an organization is willing to tolerate?

Available Choices (select all choices that are correct)

- A. Safety Department
- B. Management
- C. Legal Department
- D. Operations Department

Answer: B

Explanation:

According to the ISA/IEC 62443 standards, the level of risk an organization is willing to tolerate is determined by the management, as they are responsible for defining the business and risk objectives, as well as the security policies and procedures for the organization. The management also has the authority to allocate the necessary resources and assign the roles and responsibilities for implementing and maintaining the security program. The legal, operations, and safety departments may provide input and feedback to the management, but they do not have the final say in determining the risk tolerance level. References: ISA/IEC 62443-2-1:2010 - Establishing an industrial automation and control systems security program, section 4.2.1.

NEW QUESTION # 94

Which characteristic is MOST closely associated with the deployment of a demilitarized zone (DMZ)?

Available Choices (select all choices that are correct)

- A. Email is prevented, thereby mitigating the risk of phishing attempts.
- B. Internet access through the firewall is allowed.
- C. **Level 4 systems must use the DMZ to communicate with Level 3 and below.**
- D. Level 0 can only interact with Level 1 through the firewall.

Answer: C

NEW QUESTION # 95

A plant has several zones including business, safety-critical, and wireless zones. According to ISA/IEC 62443, how should these zones be managed during risk assessment?

- A. Ignore physical location when grouping assets.
- B. Treat temporarily connected devices as part of the safety zone permanently.
- C. Combine all zones into one for simplicity.
- D. **Establish clear separation between zones based on criticality.**

Answer: D

Explanation:

The zone and conduit model, core to IEC 62443-3-2, emphasizes the importance of separating zones based on their risk profile and criticality.

From IEC 62443-3-2, Clause 4.5.2:

"Zones should be established to group assets with similar security requirements. The separation of zones ensures that assets with differing risk levels are appropriately isolated to reduce the attack surface and limit propagation of potential threats." Furthermore, Clause 4.5.5 states:

"The use of conduits between zones should be carefully evaluated and controlled, with security functions tailored to the sensitivity of the zones involved." Incorrect Options:

- A). Combine all zones - Violates the principle of segmentation and defense-in-depth.
- B). Ignore physical location - Physical and logical segmentation is key in risk assessment.
- D). Treat temporary devices as permanent - Inconsistent with the dynamic risk-based approach outlined in 62443-3-2.

ISA/IEC 62443 Study Guide

NEW QUESTION # 96

.....

Nowadays, seldom do the exam banks have such an integrated system to provide you a simulation test. You will gradually be aware of the great importance of stimulating the actual exam after learning about our ISA-IEC-62443 Study Tool. Because of this function, you can easily grasp how the practice system operates and be able to get hold of the core knowledge about the ISA/IEC 62443 Cybersecurity Fundamentals Specialist exam. In addition, when you are in the real exam environment, you can learn to control your speed and quality in answering questions and form a good habit of doing exercise, so that you're going to be fine in the ISA/IEC 62443 Cybersecurity Fundamentals Specialist exam.
