

ACD201 Test Free | Test ACD201 Cram Review

ACD201

Option C : Create a custom plug-in that can write an audit trail to a log file.

Correct Answer: B

QUESTION: 6

You are code-checking your colleague's process model before marking it as Ready for Deployment. Which three best practices should be applied? (Choose three.)

Option A : All nodes should have exception flows

Option B : All XOR/OR gateways should have a single incoming ow.

Option C : All outgoing flows from a gateway should be labeled

Option D : Node inputs should not make the same query call more than once.

Option E : Activity chaining should be added to the majority of flows.

Correct Answer: B,C,D

QUESTION: 7

During a sprint retrospective meeting, you need to get the team thinking about the outcomes of the last sprint. Which two basic questions should you ask? (Choose two.)

Option A : What didn't go well and can be improved?

Option B : What are the blockers?

Option C : Who did well in this sprint?

Option D : What went well?

Correct Answer: A,D

www.dumpslink.com

Dumpcollection will provides the facility of online chat to all prospective customers to discuss any issue regarding, different vendors' certification tests, ACD201 exam materials, discount offers etc. Our efficient staff is always prompt to respond you. If you need detailed answer, you send emails to our customers' care department, we will help you solve your problems as soon as possible. You will never regret to choose ACD201 Exam Materials.

What adds to the dominance of the Dumpcollection market is its promise to give its customers the latest ACD201 practice exams. The hardworking and strenuous support team is always looking to refine the ACD201 prep material and bring it to the level of excellence. It materializes this goal by taking responses from above 90,000 competitive professionals.

ACD201 exam torrent & Appian ACD201 study guide - valid ACD201 torrent

There are a lot of leading experts and professors in different field in our company. The first duty of these leading experts and professors is to compile the ACD201 exam questions. In order to meet the needs of all customers, the team of the experts in our company has done the research of the ACD201 study materials in the past years. As a result, they have gained an in-depth understanding of the fundamental elements that combine to produce world class ACD201 practice materials for all customers.

Appian ACD201 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Application Design and Development: This section of the exam measures the skills of Appian Developers and covers translating business requirements into user stories, building end-to-end applications, managing object security, applying design best practices, and ensuring user-centric experiences through proper UX design.
Topic 2	<ul style="list-style-type: none">Advanced Appian Concepts: This section of the exam measures the skills of Solution Architects and covers creating and configuring authentication methods, setting up integration objects, designing APIs, evaluating smart services and plug-ins, and applying SSO mechanisms with SAML and LDAP.
Topic 3	<ul style="list-style-type: none">Data Management: This section of the exam measures the skills of Solution Architects and covers designing and documenting data models, recommending record types for optimization and security, working with relational data, and implementing complex models with supporting objects.
Topic 4	<ul style="list-style-type: none">Performance and Scalability: This section of the exam measures the skills of Appian Developers and covers designing performant components, building memory-efficient models, conducting database load and automated testing, analyzing server memory and logs for risks, and resolving performance concerns for end users.

Appian Senior Developer Sample Questions (Q32-Q37):

NEW QUESTION # 32

You're reviewing the process model built by your team member.

Which two design decisions might cause performance issues? (Choose two.)

- A. No target process for the Send Message event
- B. Asynchronous subprocess
- C. Too many nodes
- D. Data types passed by reference

Answer: A,C

Explanation:

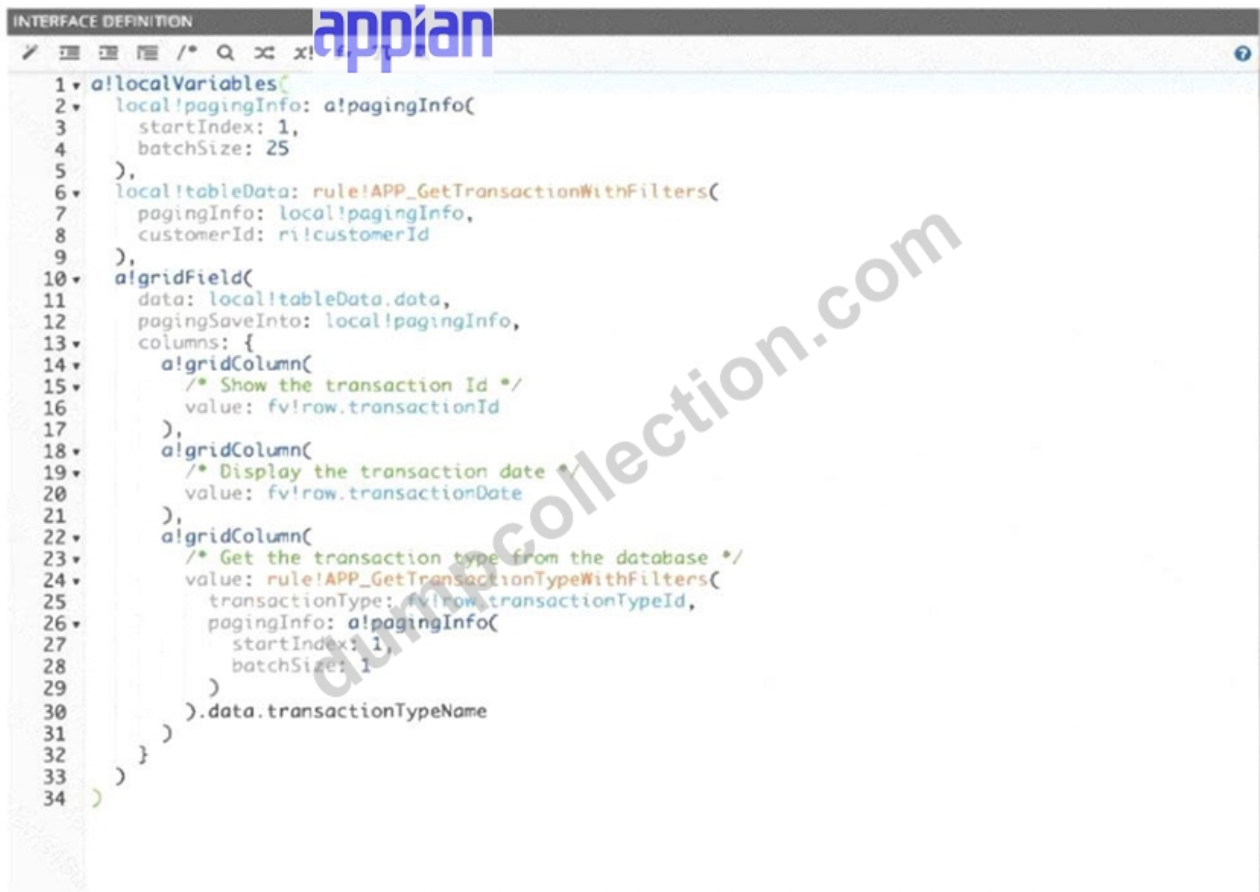

Having no target process for the Send Message event can cause unnecessary processing and delays.

Too many nodes in a process model increase complexity and processing overhead, leading to potential performance issues.

NEW QUESTION # 33

Users are experiencing slow load times when retrieving customer records with many transactions.

After using performance monitoring tools, you discover that the following interface definition is responsible for the majority of page load time:

```
1 localVariables(  
2   local!pagingInfo: a!pagingInfo(  
3     startIndex: 1,  
4     batchSize: 25  
5   ),  
6   local!tableData: rule!APP_GetTransactionWithFilters(  
7     pagingInfo: local!pagingInfo,  
8     customerId: ri!customerId  
9   ),  
10  a!gridField(  
11    data: local!tableData.data,  
12    pagingSaveInfo: local!pagingInfo,  
13    columns: {  
14      a!gridColumn(  
15        /* Show the transaction Id */  
16        value: fv!row.transactionId  
17      ),  
18      a!gridColumn(  
19        /* Display the transaction date */  
20        value: fv!row.transactionDate  
21      ),  
22      a!gridColumn(  
23        /* Get the transaction type from the database */  
24        value: rule!APP_GetTransactionTypeWithFilters(  
25          transactionType: fv!row.transactionTypeId,  
26          pagingInfo: a!pagingInfo(  
27            startIndex: 1,  
28            batchSize: 1  
29          )  
30        ).data.transactionTypeName  
31      )  
32    }  
33  )  
34 )
```

Additionally, both queries (rule!APP_GetTransactionsWithFilters and rule!APP_GetTransactionTypeWithFilters) take approximately 25 milliseconds each to execute when you test them using the expression editor.

Which action would result in the greatest reduction in the load time for this interface component?

- A. Use a synced record for Transactions to improve the query response time for the query performed on line 6.
- **B. Prefetch transaction types and use the displayvalue() function to display the Transaction Type for each transaction.**
- C. Avoid fetching the total count when getting transactions.

Answer: B

Explanation:

Prefetching all transaction types once (instead of running a separate query for each row in the grid) and then using the displayvalue() function to display the corresponding transaction type name for each transaction will significantly reduce the number of queries executed. This eliminates the N+1 query problem and will greatly improve the interface load time.

NEW QUESTION # 34

You're making a POST request to the Appian web API. You need to include complex data structures, such as lists or objects, in the request body.

How should you design the API to accept those requests?

- A. Use XML format to represent the complex data structures in the request body.
- B. Use query parameters to represent the complex data structures.
- **C. Convert the complex data structures to JSON and include them in the request body as a string.**

Answer: C

Explanation:

To include complex data structures like lists or objects in a POST request to an Appian Web API, you should convert the data to JSON and include it in the request body as a string. Appian supports application/json content type for parsing complex data structures in APIs.

NEW QUESTION # 35

In reviewing the process model metrics of your application, you notice a process model with a completion rate of only 10%. What are two possible reasons for this low completion rate? (Choose two.)

- A. The process contains at least one User Input Task with no exceptions or escalations, and users do not complete the task.
- B. There are a high number of smart service nodes configured in the process model.
- C. The days configured for archival or deletion is significantly higher than the other process models in your application.
- D. There are a significant number of instances that are experiencing process errors, which are not being handled by the production support team.

Answer: A,D

Explanation:

Process errors that remain unhandled will stall instances; those instances never reach an end event, driving the completion rate down. User-input tasks without deadlines, exceptions, or escalations can sit indefinitely when users do not act, leaving instances in an active state and lowering the overall completion percentage.

NEW QUESTION # 36

You're creating a process model that will serve as the case creation workflow.

Your requirements:

This process captures input from the user before executing a series of unattended subprocess nodes.

Each subprocess performs extended data processing which is dependent on output from each of the previous nodes.

An activity chained task node is displayed asking the user if they'd like to create another case.

What should you do?

- A. Configure the subprocess nodes to run asynchronously and set the inputs to pass as reference to enable data sharing.
- B. Combine the separate subprocesses into one synchronous subprocess and place it in between each user input task.
- C. Add an AND gate after the first user input task and place the synchronous subprocess nodes on a parallel path.

Answer: B

Explanation:

Combining the separate subprocesses into one synchronous subprocess and placing it between each user input task ensures each subprocess's output is available for the next step, maintaining data dependencies and supporting the required user experience with activity chaining.

NEW QUESTION # 37

.....

To keep pace with the times, we believe science and technology can enhance the way people study on our ACD201 exam materials. Especially in such a fast-pace living tempo, we attach great importance to high-efficient learning our ACD201 Study Guide. Therefore, our ACD201 study materials base on the past exam papers and the current exam tendency, and design such an effective simulation function to place you in the real exam environment.
