

Unparalleled 305-300 Actual Questions & Guaranteed Lpi 305-300 Exam Success with Efficient 305-300 Certification Questions

ACTUAL LES 305 FINAL Exam 2 2024 (Questions & Answers) Solved 100% Correct!!

No branch of government can exercise the authority of another branch. Also, each branch has some power to limit the actions of the other two branches; this scheme creates a system of checks and balances. TRUE OR FALSE?

True

You play football for the Tempe Moons, last year's winners of the Super Bowl. The Tempe Moons are a member of the NFL, a private org. One requirement is that all NFL players, coaches, and other members of the team stand and act in a dignified manner while the national anthem is played before the game begins. You decide not to stand due to your religion. Other players are members of your religion and they stand. The NFL suspends from further play due to your failure to stand. You want your job back.

- A. You are entitled to your job because the NFL violated your First Amendment rights prohibiting the establishment of religion.
- B. You are entitled to your job because the NFL violated your First Amendment rights since your freedom of religion is protected.
- C. You are entitled to your job because the NFL violated your First Amendment rights since your freedom of expression was violated.
- D. No constitutional rights have been violated since the NFL is a private org.

D. No constitutional rights have been violated since the NFL is a private organization. [NOTE: The NFL is not the government. Your rights under the Constitution are only effective against the government. See the top of page 143, which states that the protections under the Bill of Rights apply to federal and state governmental activities.]

Under the Commerce Clause, the federal government has the right to regulate any area of business

- a. except local business.
- b. only if international trade is involved.
- c. that affects interstate commerce.*
- d. that the states do not regulate.

that affects interstate commerce. [NOTE: This is the power to regulate transactions "among the several states under the commerce clause". See page 143-144.]

Valid 305-300 Actual Questions - Find Shortcut to Pass 305-300 Exam

In the Desktop 305-300 practice exam software version of Lpi 305-300 practice test is updated and real. The software is useable

on Windows-based computers and laptops. There is a demo of the 305-300 practice exam which is totally free. 305-300 practice test is very customizable and you can adjust its time and number of questions. Desktop 305-300 Practice Exam software also keeps track of the earlier attempted 305-300 practice test so you can know mistakes and overcome them at each and every step.

What are the advantages of having LPI 305-300 certified professionals?

The advantages of having LPI 305-300 certified professionals are:

You can get a real-time view of your application. If there is a problem, you can know about it immediately. You will be able to see how your application is being used, who is using it and what they are doing with it.

You will be able to troubleshoot issues faster and more efficiently. You will be able to quickly identify the root cause of problems and fix them before they become bigger problems that affect the whole organization. **LPI 305-300 Exam Dumps** are a great way to prove your skills and knowledge to potential employers.

You will be able to improve your security posture by blocking malicious code from entering your network or applications before they can do any damage.

Lpi LPIC-3 Exam 305: Virtualization and Containerization Sample Questions (Q74-Q79):

NEW QUESTION # 74

Which of the following values would be valid in the FROM statement in a Dockerfile?

- A. file:/tmp/ubuntu/Dockerfile
- B. http://docker.example.com/images/ubuntu-focal.iso
- C. docker://ubuntu:focal
- **D. ubuntu:focal**
- E. registry:ubuntu:focal

Answer: D

Explanation:

The FROM statement in a Dockerfile specifies the base image from which the subsequent instructions are executed¹. The value of the FROM statement can be either an image name, an image name with a tag, or an image ID¹. The image name can be either a repository name or a repository name with a registry prefix². For example, ubuntu is a repository name, and docker.io/ubuntu is a repository name with a registry prefix². The tag is an optional identifier that can be used to specify a particular version or variant of an image¹. For example, ubuntu:focal refers to the image with the focal tag in the ubuntu repository². The image ID is a unique identifier that is automatically generated when an image is built or pulled¹. For example, sha256:9b0dafaadb1cd1d14e4db51bd0f4c0d56b6b551b2982b2b7c637ca143ad605d2 is an image ID³.

Therefore, the only valid value in the FROM statement among the given options is ubuntu:focal, which is an image name with a tag. The other options are invalid because:

* docker://ubuntu:focal is not a valid image name format. The docker:// prefix is used to specify a transport protocol, not a registry prefix⁴.

* registry:ubuntu:focal is not a valid image name format. The registry prefix should be a valid hostname or IP address, not a generic term².

* file:/tmp/ubuntu/Dockerfile is not a valid image name format. The file: prefix is used to specify a local file path, not an image name⁵.

* http://docker.example.com/images/ubuntu-focal.iso

is not a valid image name format.

The

http:// prefix is used to specify a web URL, not an image name

5.

NEW QUESTION # 75

FILL BLANK

What is the default path to the Docker daemon configuration file on Linux? (Specify the full name of the file, including path.)

Answer:

Explanation:

/etc/docker/daemon.json

Explanation

The default path to the Docker daemon configuration file on Linux is /etc/docker/daemon.json. This file is a JSON file that contains the settings and options for the Docker daemon, which is the service that runs on the host operating system and manages the containers, images, networks, and other Docker resources. The

/etc/docker/daemon.json file does not exist by default, but it can be created by the user to customize the Docker daemon behavior.

The file can also be specified by using the --config-file flag when starting the Docker daemon. The file must be a valid JSON object and follow the syntax and structure of the dockerd reference docs¹². References:

* Docker daemon configuration file - Medium³

* Docker daemon configuration overview | Docker Docs⁴

* docker daemon | Docker Docs⁵

NEW QUESTION # 76

Which of the following commands deletes all volumes which are not associated with a container?

- A. docker volume vacuum
- B. docker volume garbage-collect
- C. docker volume cleanup
- D. docker volume orphan -d
- E. docker volume prune

Answer: E

NEW QUESTION # 77

What is true about containerd?

- A. It requires the Docker engine and Docker CLI to be installed.
- B. It runs in each Docker container and provides DHCP client functionality
- C. It is a text file format defining the build process of containers.
- D. It is the initial process run at the start of any Docker container.
- E. It uses **rune** to start containers on a container host.

Answer: E

NEW QUESTION # 78

What is the purpose of a .dockerignore file?

- A. It exists in the root file system of containers that should ignore volumes and ports provided by Docker.
- B. It lists files existing in a Docker image which should be excluded when building a derivative image.
- C. It specifies files that Docker does not submit to the Docker daemon when building a Docker image
- D. It specifies which parts of a Dockerfile should be ignored when building a Docker image.
- E. It must be placed in the top level directory of volumes that Docker should never attach automatically to a container

Answer: C

Explanation:

The purpose of a .dockerignore file is to specify files that Docker does not submit to the Docker daemon when building a Docker image. A .dockerignore file is a text file that contains a list of files or directories that should be excluded from the build context, which is the set of files and folders that are available for use in a Dockerfile. By using a .dockerignore file, you can avoid sending files or directories that are large, contain sensitive information, or are irrelevant to the Docker image to the daemon, which can improve the efficiency and security of the build process. The other options are incorrect because they do not describe the function of a

.dockerignore file. Option A is wrong because a .dockerignore file does not affect the files existing in a Docker image, but only the files sent to the daemon during the build. Option C is wrong because a .dockerignore file does not exist in the root file system of containers, but in the same directory as the Dockerfile. Option D is wrong because a .dockerignore file does not affect the volumes that Docker attaches to a container, but only the files included in the build context. Option E is wrong because a .dockerignore file does not affect the parts of a Dockerfile that are executed, but only the files available for use in a Dockerfile.
