Axis Network Video Exam Sample Questions (Q147-Q152):

NEW QUESTION # 147

The main benefit of using Power over Ethernet (PoE) is that

- A. the installation is less sensitive to interference.
- B. the installation is more secure.
- C. the installation costs less.
- C the installation consumes less power.

Answer: C

Explanation:

The main benefit of using Power over Ethernet (PoE) is cost reduction in installation. PoE allows network cables to carry both data and power, eliminating the need for separate power lines and reducing the amount of cabling required. This simplifies installation, reduces material costs, and allows greater flexibility in camera placement. Axis Communications notes that PoE significantly cuts down on installation expenses by streamlining the infrastructure needed for network devices.

NEW QUESTION # 148

The camera sensors in Axis' multidirectional cameras can be

□

- A. individually adjusted.
- B. moved only as one unit.
- C. added or removed.
- D. stitched for a seamless image.

Answer: A

Explanation:

The camera sensors in Axis' multidirectional cameras can be individually adjusted. This flexibility allows each sensor to be positioned independently, enabling optimal coverage of the desired areas. Such adjustability ensures that a single camera unit can cover multiple directions or areas, enhancing the efficiency and effectiveness of the surveillance setup. Axis' multidirectional camera specifications and manuals provide detailed information on this feature.

NEW QUESTION # 149

Why is corridor format useful for this scene?

- A. It increases the light sensitivity
- B. It increases the vertical field of view
- C. It increases the maximum frame rate
- D. It enables slower shutter speeds to be used

Answer: B

Explanation:

The corridor format is particularly useful for scenes such as the one depicted because it optimizes the camera's field of view for narrow, vertical areas. Traditional horizontal formats waste much of the frame on walls or empty spaces when monitoring hallways, staircases, or aisles. By rotating the camera 90 degrees and using the corridor format, you maximize the vertical field of view, allowing for better coverage and more effective surveillance in such environments. Axis Communications documents and product guides frequently highlight this advantage for corridor format applications.
