# 100% Pass Quiz 2026 Reliable Nokia New 4A0-D01 Test Experience

P.S. Free 2026 Nokia 4A0-D01 dumps are available on Google Drive shared by PracticeMaterial: https://drive.google.com/open?id=1RcMeLwnVP98qXx3W6d0ZpIBw6CzHmUa7

Our clients come from all around the world and our company sends the products to them quickly. The clients only need to choose the version of the product, fill in the correct mails and pay for our Nokia Data Center Fabric Fundamentals Exam guide dump. Then they will receive our mails in 5-10 minutes. Once the clients click on the links they can use our 4A0-D01 Study Materials immediately. If the clients can't receive the mails they can contact our online customer service and they will help them solve the problem. Finally the clients will receive the mails successfully. The purchase procedures are simple and the delivery of our 4A0-D01 study tool is fast.

## Nokia 4A0-D01 Exam Syllabus Topics:

| Topic | Details |
|---|---|
| Topic 1 | • SR Linux Configuration and Routing: This section of the exam measures skills of a Network Automation Specialist and focuses on configuring and managing SR Linux systems. It examines the YANG-driven CLI, JSON output, environment variables, and static and dynamic routing. Learners also explore BGP, ECMP, IP-VRF, MAC-VRF, and the use of VXLAN with EVPN to implement both Layer 2 and Layer 3 overlays, including symmetric and asymmetric models. |
| Topic 2 | • SR Linux Logging, Monitoring, and Filtering: This section of the exam measures skills of a Data Center Network Engineer and addresses how to implement logging, monitoring, and traffic filtering in SR Linux. It explains log file usage, ACL types, CPM filtering, and packet capture filters. Configuration tasks involve applying ACLs and monitoring network activity using capture tools. |
| Topic 3 | • Nokia DC Fabric Solution: This section of the exam measures skills of a Data Center Network Engineer and covers the architecture and benefits of modern Layer 3 data center networks. It includes an overview of BGP-based routing, VXLAN and EVPN overlays for multi-tenant environments, and key features of the SR Linux operating system. The section also explains how APIs are used for external configuration and introduces the Fabric Services System's management capabilities. |
| Topic 4 | • Module 5 – EDA (Event Driven Automation) Introduction |

## 4A0-D01 Practice Mock | Guaranteed 4A0-D01 Success

Perhaps you worry about that you have difficulty in understanding our 4A0-D01 training questions. Frankly speaking, we have taken

all your worries into account. Firstly, all knowledge of the 4A0-D01 exam materials have been simplified a lot. Also, we have tested many volunteers who can prove that after studying our 4A0-D01 Exam Questions for 20 to 30 hours, it is easy to pass the exam. The results show that our 4A0-D01 study materials are easy for them to understand. In addition, they all enjoy learning on our 4A0-D01 practice exam study materials.

# Nokia Data Center Fabric Fundamentals Exam Sample Questions (Q13-Q18):

**NEW QUESTION # 13**
Which of the following statements about IP-VRFs in Nokia's SR Linux is FALSE?

- A. Packets in an IP-VRF are forwarded based on the destination IP address.
- B. An IP-VRF is a Layer 3 network instance.
- C. Multiple servers can be connected to the same subnet in an IP-VRF.
- D. The router maintains a distinct route table for each IP-VRF instance.

**Answer: C**

Explanation:
Multiple servers connected to the same subnet typically reside within the same Layer 2 domain or MAC-VRF. IP-VRFs operate at Layer 3 and segment routing and forwarding by separate routing tables, so multiple servers on the same subnet are not a function of IP-VRF.

**NEW QUESTION # 14**
How does Nokia's Fabric Services System use a fabric intent to build the DC switch fabric?

- A. It uses telemetry data to build the configuration files for the DC fabric.
- B. It uses a digital sandbox to build the configuration files for the DC fabric.
- C. It uses a YAML file that defines the intended configuration state of the DC fabric.
- D. It uses a digital sandbox to connect workloads to the DC fabric.

**Answer: C**

Explanation:
Nokia's Fabric Services System uses a fabric intent defined in a declarative YAML file to specify the desired state of the data center fabric, which is then used to build and configure the fabric accordingly.

**NEW QUESTION # 15**
Based on the exhibit output, which of the following statements is TRUE?

```
A:dc-leaf-2# tools system traffic-monitor protocol icmp
:
:
1      0.000000000     ethernet-1/10.0 192.168.201.2   192.168.101.2   ICMP   146    Echo (ping) request  id=0x4d00, seq=0/0, ttl=64
2      0.999071319     ethernet-1/10.0 192.168.201.2   192.168.101.2   ICMP   146    Echo (ping) request  id=0x4d00, seq=1/256,
ttl=64
3      0.999091850     ethernet-1/2.0  192.168.101.2   192.168.201.2   ICMP   146    Echo (ping) reply    id=0x4d00, seq=1/256,
ttl=62 (request in 2)
4      1.998173614     ethernet-1/10.0 192.168.201.2   192.168.101.2   ICMP   146    Echo (ping) request  id=0x4d00, seq=2/512,
ttl=64
5      1.999246136     ethernet-1/2.0  192.168.101.2   192.168.201.2   ICMP   146    Echo (ping) reply    id=0x4d00, seq=2/512,
ttl=62 (request in 4)
:
:
```

- A. A cpm-filter is configured to accept ICMP packets, which are then captured in a log file.
- B. capture-filter is configured to copy ICMP packets to the CPM where they are processed by the tcpdump-like utility.
- C. A cpm-filter policer is configured to rate limit ICMP packets, which are then captured in a log file.
- D. An ACL filter is configured to accept ICMP packets, which are then processed by the tcpdump-like utility.

**Answer: B**

Explanation:
The exhibit shows ICMP packets being captured and displayed by a tcpdump-like utility, which indicates that a capture-filter is configured to copy ICMP packets to the Control Plane Manager (CPM) where they are processed and monitored.

## NEW QUESTION # 16

Which of the following statements about the IRB subinterface configuration in Nokia SR Linux is FALSE?

- A. One IRB subinterface is configured in a MAC-VRF network instance.
- B. One IRB subinterface is configured for each interface within a MAC-VRF network instance.
- C. An IRB subinterface is configured in an IP-VRF network instance.
- D. An IP address is configured under the IRB's subinterface.

**Answer: B**

Explanation:
In Nokia SR Linux, IRB subinterfaces are configured one per MAC-VRF network instance, not one for each interface within that instance. Multiple IRB subinterfaces per interface are not typical.

## NEW QUESTION # 17

Which of the following statements about resilient ECMP load balancing is TRUE?

- A. Hash buckets are used to ensure that flows egressing the same interface on one router use different egress interfaces on downstream routers.
- B. The hash value used to distribute traffic is calculated as a modulo function on specific fields of the packet header.
- C. When one of the next-hops fail, only flows currently egressing to that next-hop are impacted.
- D. A different hash seed is used on downstream routers to ensure that flows are randomly distributed across all eligible router interfaces.

**Answer: C**

Explanation:
In resilient ECMP load balancing, when a next-hop fails, only the flows that were using that specific next-hop are affected and need to be redistributed, minimizing disruption to other flows.

## NEW QUESTION # 18

......

These are expertly designed Nokia 4A0-D01 mock tests, under the supervision of thousands of professionals. A 24/7 customer service is available for assistance in case of any sort of pinch. It shows results at the end of every 4A0-D01 mock test attempt so you don't repeat mistakes in the next try. To confirm the license of the product, you need an active internet connection. PracticeMaterial desktop Nokia Data Center Fabric Fundamentals Exam (4A0-D01) practice test is compatible with every Windows-based computer. You can use this software without an active internet connection.
