Challenge is omnipresent like everywhere. By eliciting all necessary and important points into our AZ-400 practice engine, their quality and accuracy have been improved increasingly, so their quality is trustworthy and unquestionable. There is a bunch of considerate help we are willing to offer on our AZ-400 learning questions. If you have any question on downloading or opening the file, you can just contact us. And we will help you until you can use our AZ-400 exam prep.

Microsoft AZ-400: Prerequisites

The candidates have two options of prerequisites to fulfill before they can go for the Microsoft AZ 400 exam. The first option requires that you first earn the Microsoft Certified: Azure Administrator Associate certificate. As for the second one, you should obtain Microsoft Certified: Azure Developer Associate. After meeting either of these prerequisites, you can proceed with this certification path.

AZ-400 New Practice Questions - Reliable AZ-400 Learning Materials

FreeDumps Designing and Implementing Microsoft DevOps Solutions (AZ-400) exam dumps save your study and preparation time. Our experts have added hundreds of Designing and Implementing Microsoft DevOps Solutions (AZ-400) questions similar to the real exam. You can prepare for the Designing and Implementing Microsoft DevOps Solutions (AZ-400) exam dumps during your job. You don't need to visit the market or any store because FreeDumps Designing and Implementing Microsoft DevOps Solutions (AZ-400) exam questions are easily accessible from the website.

Microsoft AZ-400 Certification Exam is an excellent opportunity for professionals to validate their skills and knowledge in DevOps practices and Microsoft technologies. It is a popular certification among individuals who want to enhance their career in software development, operations, testing, and project management. By achieving this certification, candidates can demonstrate their proficiency in designing and implementing DevOps solutions using Azure DevOps and other Microsoft technologies.

Microsoft Designing and Implementing Microsoft DevOps Solutions Sample Questions (Q13-Q18):

NEW QUESTION # 13

You need to configure authentication for App1. The solution must support the planned changes.

Which three actions should you perform in sequence? To answer, move all actions from the list of actions to the answer area and arrange them in the correct order.

Actions Commands Cmdlets Statements

Answer Area

Create an app.
Add a secret.
Create a credential.
Configure the ID and secret for App1.
Create a managed service identity.

Answer:

Explanation:

Actions Commands Cmdlets Statements	Answer Area
Create an app.	Create an app.
Add a secret.	
Create a credential.	Create a managed service identity.
Configure the ID and secret for App1.	Configure the ID and secret for App1.
Create a managed service identity.	

Explanation

Graphical user interface, text, application Description automatically generated

Create an app.
Create a managed service identity.
Configure the ID and secret for App1.

Woodgrove Bank plans to implement the following changes to the identity environment:

Configure App1 to use a service principal.

NEW QUESTION # 14

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the

review screen.

You plan to create a release pipeline that will deploy Azure resources by using Azure Resource Manager templates. The release pipeline will create the following resources:

- * Two resource groups
- * Four Azure virtual machines in one resource group
- * Two Azure SQL databases in other resource group

You need to recommend a solution to deploy the resources.

Solution: Create two standalone templates, each of which will deploy the resources in its respective group.

Does this meet the goal?

- **A. No**
- B. Yes

Answer: A

Explanation:

Explanation

Use a main template and two linked templates.

References: <https://docs.microsoft.com/en-us/azure/azure-resource-manager/resource-group-linked-templates>

Topic 2, Case Study: 1 Overview

Existing Environment

Litware, Inc. is an independent software vendor (ISV). Litware has a main office and five branch offices.

Application Architecture

The company's primary application is a single monolithic retirement fund management system based on ASP.NET web forms that use logic written in VB.NET. Some new sections of the application are written in C#.

Variations of the application are created for individual customers. Currently, there are more than 80 code branches in the application's code base.

The application was developed by using Microsoft Visual Studio. Source code is stored in Team Foundation Server (TFS) in the main office. The branch offices access the source code by using TFS proxy servers.

Architectural Issues

Litware focuses on writing new code for customers. No resources are provided to refactor or remove existing code. Changes to the code base take a long time, and dependencies are not obvious to individual developers.

Merge operations of the code often take months and involve many developers. Code merging frequently introduces bugs that are difficult to locate and resolve.

Customers report that ownership costs of the retirement fund management system increase continually. The need to merge unrelated code makes even minor code changes expensive.

Requirements

Planned Changes

Litware plans to develop a new suite of applications for investment planning. The investment planning Applications will require only minor integration with the existing retirement fund management system.

The investment planning applications suite will include one multi-tier web application and two iOS mobile applications. One mobile application will be used by employees; the other will be used by customers.

Litware plans to move to a more agile development methodology. Shared code will be extracted into a series of packages.

Litware has started an internal cloud transformation process and plans to use cloud-based services whenever suitable.

Litware wants to become proactive in detecting failures, rather than always waiting for customer bug reports.

Technical Requirements

The company's investment planning applications suite must meet the following technical requirements:

- * New incoming connections through the firewall must be minimized.
- * Members of a group named Developers must be able to install packages.
- * The principle of least privilege must be used for all permission assignments.
- * A branching strategy that supports developing new functionality in isolation must be used.
- * Members of a group named Team Leaders must be able to create new packages and edit the permissions of package feeds.
- * Visual Studio App Center must be used to centralize the reporting of mobile application crashes and device types in use.
- * By default, all App Center must be used to centralize the reporting of mobile application crashes and device types in use.
- * Code quality and release quality are critical. During release, deployments must not proceed between stages if any active bugs are logged against the release.
- * The mobile applications must be able to call the share pricing service of the existing retirement fund management system. Until the system is upgraded, the service will only support basic authentication over HTTP.
- * The required operating system configuration for the test servers changes weekly. Azure Automation State Configuration must be used to ensure that the operating system on each test server is configured the same way when the servers are created and checked periodically.

Current Technical

The test servers are configured correctly when first deployed, but they experience configuration drift over time. Azure Automation State Configuration fails to correct the configurations.

Azure Automation State Configuration nodes are registered by using the following command.

```
Register-AzureRmAutomationDscNode
-ResourceGroupName 'TestResourceGroup'
-AutomationAccountName 'LitwareAutomationAccount'
-AzureVMName $vmname
-ConfigurationMode 'ApplyOnly'
```

NEW QUESTION # 15

You have several Azure Active Directory (Azure AD) accounts.

You need to ensure that users use multi-factor authentication (MFA) to access Azure apps from untrusted networks.

What should you configure in Azure AD?

- A. entitlement management
- **B. conditional access**
- C. managed identities
- D. access reviews

Answer: B

NEW QUESTION # 16

You have the following Azure policy.

```
if: {
  allOf: [
    {
      "field": "type",
      "equals": "Microsoft.Storage/storageAccounts"
    },
    {
      "field": "Microsoft.Storage/storageAccounts/supportsHttpsTrafficOnly",
      "notEquals": "true"
    }
  ]
}
```

- A. prevents all HTTP traffic to existing Azure Storage accounts
- B. ensures that all traffic to new Azure Storage accounts is encrypted
- **C. ensures that all data for new Azure Storage accounts is encrypted at rest**
- D. prevents HTTPS traffic to new Azure Storage accounts when the accounts are accessed over the internet

Answer: C

NEW QUESTION # 17

You have a web app that connects to an Azure SQL Database named db1.

You need to configure db1 to send Query Store runtime statistics to Azure Log Analytics.

To complete this task, sign in to the Microsoft Azure portal.

Answer:

Explanation:

see the answer below

Explanation:

To enable streaming of diagnostic telemetry for a single or a pooled database, follow these steps:

1. Go to Azure SQL database resource.
2. Select Diagnostics settings.
3. Select Turn on diagnostics if no previous settings exist, or select Edit setting to edit a previous setting. You can create up to three parallel connections to stream diagnostic telemetry.
4. Select Add diagnostic setting to configure parallel streaming of diagnostics data to multiple resources.

5. Enter a setting name for your own reference.
6. Select a destination resource for the streaming diagnostics data: Archive to storage account, Stream to an event hub, or Send to Log Analytics.
7. For the standard, event-based monitoring experience, select the following check boxes for database diagnostics log telemetry: QueryStoreRuntimeStatistics

Diagnostics settings

Save Discard Delete

* Name

service

☐ Archive to a storage account

☐ Stream to an event hub

☒ Send to Log Analytics
