Closed cars will not improve, and when we are reviewing our qualifying examinations, we should also pay attention to the overall layout of various qualifying examinations. For the convenience of users, our Configuring Windows Server Hybrid Advanced Services learn materials will be timely updated information associated with the qualification of the home page, so users can reduce the time they spend on the Internet, blindly to find information. Our AZ-801 Certification material get to the exam questions can help users in the first place, and what they care about the test information, can put more time in learning a new hot spot content. Users can learn the latest and latest test information through our AZ-801 test dumps. What are you waiting for?

## Skills measured

- Implement and manage Windows Server high availability (10-15%)
- Secure Windows Server on-premises and hybrid infrastructures (25-30%)
- Implement disaster recovery (10-15%)
- Migrate servers and workloads (20-25%)
- The English language version of this exam will be updated on August 3, 2022. Download the study guide in the preceding "Tip" box for more details about the skills measured on this exam.

Microsoft AZ-801 exam is designed to test an individual's knowledge and skills in configuring and managing Windows Server Hybrid Advanced Services. Configuring Windows Server Hybrid Advanced Services certification exam is intended for IT professionals who possess the necessary experience and expertise in configuring, deploying, and managing Windows Server environments. AZ-801 Exam measures a candidate's ability to implement and manage various advanced services such as Azure Site Recovery, Azure Backup, and Azure File Sync, among others.

Our loyal customers give us strong support in the past ten years. Luckily, our AZ-801 learning materials never let them down. Our company is developing so fast and healthy. Up to now, we have made many achievements. Also, the AZ-801 study guide is always popular in the market. All in all, we will keep up with the development of the society. And we always keep updating our AZ-801 Practice Braindumps to the latest for our customers to download. Just buy our AZ-801 exam questions and you will find they are really good!

Microsoft AZ-801 exam is an expert-level certification exam that focuses on configuring Windows Server Hybrid Advanced Services. AZ-801 exam is intended for IT professionals who have extensive knowledge and experience in implementing and

managing Windows Server technologies in a hybrid environment. Candidates who have passed the AZ-801 Exam have demonstrated their ability to configure and manage advanced Windows Server services using Microsoft Azure and other cloud-based technologies.

## Microsoft Configuring Windows Server Hybrid Advanced Services Sample Questions (Q167-Q172):

### NEW QUESTION # 167

Your network contains an Active Directory Domain Services (AD DS) domain that has the Active Directory Recycle Bin enabled. All domain controllers are backed up daily.

You accidentally remove all the users from a domain group.

You need to get a list of the users that were previously in the group.

Which four actions should you perform in sequence from a domain controller? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

**Answer:**

Explanation:

Reference:

<http://sysadmin.doc.blogspot.com/2018/10/mount-active-directory-database-from.html>

### NEW QUESTION # 168

You have an on-premises Active Directory Domain Services (AD DS) domain that contains the resources shown in the following table.

The domain contains the domain controllers shown in the following table.

You configure a site link between Site1 and Site2 and set the replication interval to 20 minutes.

At 10:00 AM, connectivity between Site1 and Site2 fails.

Administrators perform the actions shown in the following table.

At 10:30 AM, connectivity between Site1 and Site2 is restored.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth dim point

**Answer:**

Explanation:

### NEW QUESTION # 169

With which servers can Server1 and Server3 communicate? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

### NEW QUESTION # 170

You have two servers that have the Web Server (IIS) server role installed. The servers are configured as shown in the following table.

Both servers are configured to enable website deployment by using the Web Deployment Tool. Server1 hosts a website named Site1 that has Web Deploy Publishing configured.

You plan to migrate Site1 to Server2.

You need to perform a pull synchronization of Site1 by using the Web Deployment Agent Service.

How should you complete the command? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

□ Explanation:

<https://docs.microsoft.com/en-us/iis/publish/using-web-deploy/synchronize-iis>

**NEW QUESTION # 171**

You have a server named Server1 that runs the Remote Desktop Session Host role service. Server1 has five custom applications installed.

Users who sign in to Server1 report that the server is slow. Task Manager shows that the average CPU usage on Server1 is above 90 percent. You suspect that a custom application on Server1 is consuming excessive processor capacity.

You plan to create a Data Collector Set in Performance Monitor to gather performance statistics from Server1.

You need to view the resources used by each of the five applications.

Which object should you add to the Data Collector Set?

- A. Process
- B. Processor
- C. Processor performance
- D. Processor information

**Answer: A**

Explanation:

Clicking these buttons displays information such as business requirements, existing environment, and problem statements. If the case study has an All Information tab, note that the information displayed is identical to the information displayed on the subsequent tabs. When you are ready to answer a question, click the Question button to return to the question.

Overview

Fabrikam, Inc. is a manufacturing company that has a main office in Chicago and a branch office in Paris.

Existing Environment

Identity Infrastructure

Fabrikam has an Active Directory Domain Services (AD DS) forest that syncs with an Azure Active Directory (Azure AD) tenant.

The AD DS forest contains two domains named corp.fabrikam.com and europe.fabrikam.com.

Chicago Office On-Premises Servers

The office in Chicago contains on-premises servers that run Windows Server 2016 as shown in the following table.

□ All the servers in the Chicago office are in the corp.fabrikam.com domain.

All the virtual machines in the Chicago office are hosted on HV1 and HV2. HV1 and HV2 are nodes in a failover cluster named Cluster1.

WEB1 and WEB2 run an Internet Information Services (IIS) website. Internet users connect to the website by using a URL of

<https://www.fabrikam.com>

All the users in the Chicago office run an application that connects to a UNC path of \\Fileserver1\Data.

Paris On-Premises Servers

The office in Paris contains a physical server named dc2.europe.fabrikam.com that runs Windows Server 2016 and is a domain controller for the europe.fabrikam.com domain.

Network Infrastructure

The networks in both the Chicago and Paris offices have local internet connections. The Chicago and Paris offices are connected by using VPN connections.

The client computers in the Chicago office get IP addresses from DHCP1.

Security Risks

Fabrikam identifies the following security risks:

Some accounts connect to AD DS resources by using insecure protocols such as NTLMv1, SMB1, and unsigned LDAP.

Servers have Windows Defender Firewall enabled. Server administrators sometimes modify firewall rules and allow risky connections.

Requirements

Security Requirements

Fabrikam identifies the following security requirements:

Prevent server administrators from configuring Windows Defender Firewalls rules.

Encrypt all the data disks on the servers by using BitLocker Drive Encryption (BitLocker).

Ensure that only authorized applications can be installed or run on the servers in the forest.

Implement Microsoft Sentinel as a reporting solution to identify all connections to the domain controllers that use insecure protocols.

On-Premises Migration Plan

Fabrikam plans to migrate all the existing servers and identifies the following migration requirements:

Move the APP1 and APP2 virtual machines in the Chicago office to a new Hyper-V failover cluster named Cluster2 that will run Windows Server 2022.

Cluster2 will contain two new nodes named HV3 and HV4.

All virtual machine files will be stored on a Cluster Shared Volume (CSV).

Migrate Archive1 to a new failover cluster named Cluster3 that will run Windows Server 2022.

Cluster3 will contain two physical nodes named Node1 and Node2.

The file shares on Cluster3 will be a failover cluster role in active-passive mode.

Migrate all users, groups, and client computers from europe.fabrikam.com to corp.fabrikam.com.

The migration will be performed by using the Active Directory Migration Tool (ADMT).

A computer named ADMTcomputer will be deployed to the corp.fabrikam.com domain to run ADMT migration procedures.

User accounts will retain their existing password.

Migrate the data share from Fileserver1 to a new server named Fileserver2 that will run Windows Server 2022. After the migration, the data share must be accessible by using the existing UNC path.

Azure Migration Plan

Fabrikam plans to migrate some resources to Azure and identifies the following migration requirements:

Create an Azure subscription named Sub1.

Create an Azure virtual network named Vnet1.

Use ExpressRoute to connect the Paris and Chicago offices to Vnet1.

License all servers for Microsoft Defender for servers.

Migrate APP3 and APP4 to Azure.

Migrate the www.fabrikam.com website to an Azure App Service web app named WebApp1.

Decommission WEB1 and WEB2.

DHCP Migration Plan

Fabrikam plans to replace DHCP1 with a new server named DHCP2 and identifies the following migration requirements:

Ensure that DHCP2 provides the same IP addresses that are currently available from DHCP1.

Prevent DHCP1 from servicing clients once services are enabled on DHCP2.

Ensure that the existing leases and reservations are migrated.
