ISTQB Certified Tester Advanced Level - Test Manager Sample Questions (Q178-Q183):

NEW QUESTION # 178

SoftTech provides a core banking product to retail banks to enable their customers to process payments via the Internet and telephone banking and. as SoftTech's Test Manager, you are responsible for system testing and system integration testing of all SoftTech's products.

Your current project is to integrate SoftTech's core banking product with an existing bank's systems, which are maintained by experienced developers but poorly documented.

A specification for the 10 interfaces to the bank's existing systems has been produced by SoftTech's development team. There is an estimating matrix for system integration testing that allows 2 man days per interface for preparation, plus 2 man days per interface for test execution. The exit criteria for the completion of system integration testing has been agreed as:

1. No open Severity 1 defects
- 2 No more than 10 open severity 2 and/or 3 defects
3. All interfaces tested
4. Cost estimate must not be exceeded

System integration test execution is scheduled to last 5 weeks, with week 5 reserved for regression and bug fixing only.

At the end of week 3 the following test report has been produced (figures on a week by week basis, not cumulative):

- (b). Open severity 2 and 3 defects
- (c). Interface testing progress
- (d). Development resource for debugging
- (e). Available budget

SELECT ONE OPTION

- A. c and d.
- B. b and c.
- C. d and e.
- D. c and e

Answer: A

NEW QUESTION # 179

What is the purpose of the defect management committee?

- A. To validate defect reports and determine fix plans
- B. To implement strict guidelines for defect report creation
- C. To control the flow of defect reports into the system
- D. To ensure the developers fix all defects

Answer: A

Explanation:

Purpose of the Defect Management Committee (DMC):

The DMC evaluates reported defects to confirm their validity, prioritize them, and create plans for resolution. It ensures effective coordination between testers, developers, and stakeholders.

Evaluation of Options:

A (Controlling defect report flow) is a subset of validation but not the main purpose.

B is correct because it fully captures the committee's role.

C (Implementing strict guidelines) is procedural, not the DMC's core function.

D (Ensuring developers fix all defects) misrepresents the committee's authority.

Reference and Syllabus Alignment:

This aligns with defect lifecycle management as described in "Defect Management" (TM-2.3.1).

NEW QUESTION # 180

During what step of the Fundamental Test Process should you define the methods to be used to collect test metrics? [1]

- A. Analysis
- B. Closure
- C. Planning
- D. Execution

Answer: C

Explanation:

The correct answer is B. Planning. This is because test metrics are quantitative measures that are used to monitor and control the test process, and to evaluate the test results and quality. Test metrics should be defined during the planning step of the Fundamental Test Process, which is the activity of establishing the test objectives, scope, approach, resources, schedule, and deliverables. By defining the methods to be used to collect test metrics during the planning step, the test team can ensure that the test metrics are aligned with the test plan and the project goals, and that the data collection process is consistent and efficient. NEW QUESTION # 181

Your test process is fully integrated into the software development lifecycle. You are at which TMMi level?

[1]

- A. Managed
- B. Initial
- C. Defined
- D. Optimized

Answer: C

Explanation:

According to the TMMi model, the test process is fully integrated into the software development lifecycle at the Defined level. This level establishes that all projects are following the same standards and procedures throughout the organization or organizational unit. Test is integrated into the development life cycle and into all projects from early in development. TMMi Model TMMi Introduction References:

NEW QUESTION # 182

Your application development team is performing "test-driven" development. This is a core principle of which software development model?

- A. Agile
- B. Sequential
- C. Iterative
- D. Spiral

Answer: A

Explanation:

Test-driven development (TDD) is a core principle of Agile software development. In TDD, test cases are created before the code is written, and the code is developed to pass these tests. This approach emphasizes requirements and solutions evolving through collaborative effort and is a key practice in Agile methodologies¹².

References: The Agile Alliance describes TDD as a style of programming tightly interwoven with coding, testing, and design, which is a fundamental aspect of Agile development³. Wikipedia also notes that TDD is related to the test-first programming concepts of

extreme programming, an Agile methodology. This is because test-driven development (TDD) is a style of programming in which coding, testing, and design are tightly interwoven. TDD is a core principle of agile software development, which is an iterative and adaptive approach that values customer collaboration, working software, and responding to change.
