Fortinet NSE 6 - OT Security 7.6 Architect Sample Questions (Q122-Q127):

NEW QUESTION # 122

Refer to the exhibit.

The OT devices behind the ruggedized FortiGate have vulnerabilities and you want to apply a virtual patching profile in the firewall policy. Why is Virtual Patching not available in the Security Profiles section? (Choose one answer)

- A. You must have a ruggedized FortiGate allowing the virtual patching feature.
- B. You must enable OT signatures.
- C. You must have a valid OT security service license.
- **D. You must enable Virtual Patching in the Feature Visibility section.**

Answer: D

Explanation:

The correct answer is A. You must enable Virtual Patching in the Feature Visibility section .

The study guide states clearly that "By default, virtual patching profiles are hidden on the GUI, and you must enable them through System > Feature Visibility." That exactly matches the situation in the exhibit, where Virtual Patching does not appear under Security Profiles . So the issue is not that the feature is unsupported, but that it is simply hidden in the GUI until it is enabled.

The other options do not answer the question being asked. A valid OT security service license is required for virtual patching signatures and protection workflow, and OT signatures are relevant to IPS-based OT protection, but those do not explain why the menu item itself is missing from the Security Profiles section .

The guide specifically identifies Feature Visibility as the reason the Virtual Patching profile is not shown in the GUI. Therefore, the required action is to enable Virtual Patching in System > Feature Visibility .

NEW QUESTION # 123

As an OT administrator, it is important to understand how industrial protocols work in an OT network. Which communication method is used by the Modbus protocol?

- A. It uses OSI Layer 2 and both the primary/secondary devices always send data during the communication.
- B. It uses OSI Layer 2 and the primary device sends data based on request from secondary device.
- **C. It uses OSI Layer 2 and the secondary device sends data based on request from primary device.**
- D. It uses OSI Layer 2 and both the primary/secondary devices send data based on a matching token ring.

Answer: C

Explanation:

Modbus is master/slave: the master (primary) polls; a slave (secondary) replies only when requested. That fits "secondary sends data based on request from primary device."

NEW QUESTION # 124

Refer to the exhibits. Which statement about some of the generated report elements from FortiAnalyzer is true?

The image shows two screenshots from a FortiAnalyzer report. The top screenshot is titled 'APPLICATION RISK' and contains a sidebar with navigation links: 'Definition', 'Key Applications Crossing The Network', 'Application Categories', 'Web Applications', 'Web Categories In Use', and 'Application'. The main content area is titled 'Key Applications Crossing The Network' and contains a table of top applications. The bottom screenshot is titled 'Files/File Types Transferred by Applications' and contains a sidebar with navigation links: 'Recommended Actions', 'About FortiGuard Key Services', 'Web Applications', 'Web Categories In Use', 'Application', 'Vulnerability Exploits', 'Malware: Viruses, Bots, Spyware/Adware', and 'Zero-day Attacks Detected On The Network'. The main content area is titled 'Files/File Types Transferred by Applications' and contains a table of common file names.

#	Risk	Application Name	Category
1	2	IEC.60870.5.104_Supervisory.Functions	Industrial
2	2	Modbus_Diagnostics	Industrial

Figure 4: Top applications that are considered high risk.

#	File Name
1	0e 01 01 00 00 03 00 07 53 69 65 6d 6c 5e 73 01 07 53 49 4d 41 54 49 43 02 06 53 37 2d 32 30 30
2	01 06 00 2a 04 05 00 00 cd eb f5 c6 00 00
3	01 06 00 00 04 05 00 00 cd f0 d7 c5 00 00
4	01 06 00 13 04 05 00 00 33 f7 30 46 00 00
5	01 06 00 1e 04 05 00 00 cd 4c 2d c3 00 00
6	01 06 00 29 04 05 00 00 00 90 2a c5 00 00
7	01 06 00 04 04 05 00 00 cd 7a 21 c6 00 00

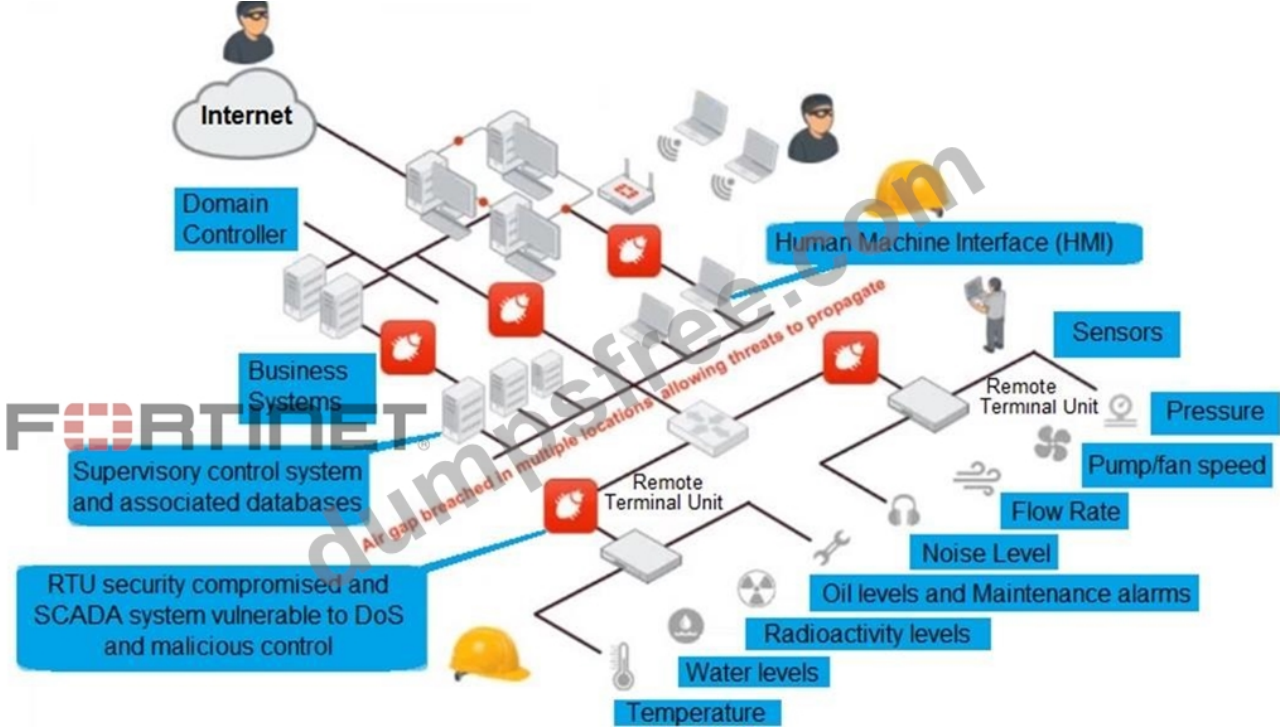

- A. The file types confirm the infected applications on the PLCs.

- B. This report is predefined and is not available for customization.
- C. The report confirms Modbus and IEC 104 are the key applications crossing the network.
- D. FortiGate collects the logs and generates the report to FortiAnalyzer.

Answer: C

NEW QUESTION # 125

Refer to the exhibit, which shows a non-protected OT environment.

An administrator needs to implement proper protection on the OT network. Which three steps should an administrator take to protect the OT network? (Choose three.)

- A. Deploy an edge FortiGate between the internet and an OT network as a one-arm sniffer.
- B. Configure firewall policies with industrial protocol sensors
- C. Configure firewall policies with web filter to protect the different ICS networks.
- D. Deploy a FortiGate device within each ICS network.
- E. Use segmentation

Answer: B,D,E

NEW QUESTION # 126

Refer to the exhibit.

Severity	Event	Event Type	Event St...	Details	Rule	Event Handler
High	dstip:192.168.2.3	IPS	Mitigated	ip: 192.168.2.3, devid: ...	Attack_Detection	IPS_Attack_Handling
High	appcat:Web.Client	Application Control		appcat: Web.Client	OT_Security_Events	OT_Security_Events

You have configured event handlers on FortiAnalyzer to monitor your OT network.

Based on the partial Event Monitor page shown in the exhibit, which statement is correct?

- A. The corresponding IPS log has a quarantine action.
- B. The corresponding IPS log has a block or drop action.
- C. The Web.Client event is unhandled.
- D. The Web.Client event is contained.

Answer: B

Explanation:

The IPS event status is shown as Mitigated, which indicates the threat was successfully stopped by the security control. For IPS logs, this corresponds to traffic being blocked or dropped rather than merely detected.
