

100% Pass Quiz HPE7-A01 - Aruba Certified Campus Access Professional Exam Valid Braindumps Ppt

What's more, part of that Prep4sureExam HPE7-A01 dumps now are free: <https://drive.google.com/open?id=1SrCWNrAgcSeoXbB7R5EnyOFxuxB97KBN>

Our HPE7-A01 test material is known for their good performance and massive learning resources. In general, users pay great attention to product performance. After a long period of development, our HPE7-A01 research materials have a lot of innovation. We can guarantee that users will be able to operate flexibly, and we also take the feedback of users who use the Aruba Certified Campus Access Professional Exam exam dumps seriously. Once our researchers find that these recommendations are possible to implement, we will try to refine the details of the HPE7-A01 Quiz guide. Our HPE7-A01 quiz guide has been seeking innovation and continuous development.

HPE7-A01 certification exam is suitable for IT professionals with a minimum of two years of experience in designing, deploying, and managing wireless networks. It is an advanced-level certification that requires candidates to have a deep understanding of Aruba wireless solutions, including Aruba Mobility Controllers, Aruba Access Points, and Aruba AirWave.

The Aruba Certified Campus Access Professional exam is designed to test a wide range of skills and knowledge related to Aruba's networking solutions. This includes in-depth knowledge of Aruba's wireless technologies, such as access points, controllers, and management software. It also covers key concepts related to wired networking, such as VLANs, routing, and switching.

Free HPE7-A01 Braindumps - Study HPE7-A01 Dumps

Great concentrative progress has been made by our company, who aims at further cooperation with our candidates in the way of using our HPE7-A01 exam engine as their study tool. Owing to the devotion of our professional research team and responsible working staff, our HPE7-A01 Training Materials have received wide recognition and now, with more people joining in the HPE7-A01 exam army, we has become the top-raking HPE7-A01 training materials provider in the international market.

HPE7-A01 exam is an industry-recognized certification that demonstrates a professional's expertise in Aruba access solutions. It is designed for network engineers, administrators, and consultants who are responsible for designing, deploying, and managing enterprise-level wireless networks. Aruba Certified Campus Access Professional Exam certification validates the candidate's ability to configure and troubleshoot Aruba wireless networks, as well as their understanding of the latest industry standards and best practices. Earning the Aruba Certified Campus Access Professional certification can enhance an IT professional's career prospects and provide them with the knowledge and skills necessary to succeed in today's fast-paced IT environment.

HP Aruba Certified Campus Access Professional Exam Sample Questions (Q47-Q52):

NEW QUESTION # 47

A company with 10,281 employees recently deployed new HPE Aruba Networking Access Points at different branch offices. Wireless 802.1X authentication will be against a RADIUS server in the cloud. The security team is concerned that the traffic between the AP and the RADIUS server will be exposed.

What is the appropriate solution for this scenario?

- A. Enable IPSec under Data Handling in HPE Aruba Networking Central
- **B. Configure RedSec on the AP and the RADIUS server.**
- C. Enable EAP-TTLS on all wireless devices.
- D. Enable EAP-TLS on all wireless devices.

Answer: B

NEW QUESTION # 48

your customer has asked you to assign a switch management role for a new user. The customer requires the user role to View switch configuration information and have access to the PUT and POST methods for REST API.

Which default AOS-CX user role meets these requirements?

- A. auditors
- B. administrators
- **C. sysops**
- D. helpdesk

Answer: C

Explanation:

The correct answer is C. sysops.

The sysops user role is a predefined role that allows users to view switch configuration information and have access to the PUT and POST methods for REST API. The sysops user role can also use the PATCH and DELETE methods for REST API, but not for all resources. The sysops user role is suitable for users who need to perform system operations on the switch, such as backup, restore, upgrade, or reboot.

According to the AOS-CX REST API Reference basics1, one of the predefined user roles is:

sysops: Users with this role can view switch configuration information and have access to the PUT and POST methods for REST API. They can also use the PATCH and DELETE methods for REST API, but not for all resources. Users with this role can perform system operations on the switch, such as backup, restore, upgrade, or reboot.

The other options are incorrect because:

A) administrators: Users with this role have full access to all switch configuration information and all REST API methods. This role is more than what the customer requires.

B) auditors: Users with this role can only view switch configuration information and have access to the GET method for REST API. They cannot use the PUT and POST methods for REST API.

D) helpdesk: Users with this role can view switch configuration information and have access to the GET method for REST API.

They can also use the PATCH method for REST API, but only for a limited set of resources. They cannot use the PUT and POST methods for REST API.

NEW QUESTION # 49

What is true regarding 802.11k?

- A. It considers several metrics before it determines if a client should be steered to the 5GHz band, including client RSSI
- B. It extends radio measurements to define mechanisms for wireless network management of stations
- C. It reduces roaming delay by pre-authenticating clients with multiple target APs before a client roams to an AP
- **D. It provides mechanisms for APs and clients to dynamically measure the available radio resources.**

Answer: D

Explanation:

802.11k is a standard that provides mechanisms for APs and clients to dynamically measure the available radio resources in a wireless network. 802.11k defines radio resource management (RRM) functions, such as neighbor reports, link measurement, beacon reports, etc., that allow APs and clients to exchange information about the RF environment and make better roaming decisions. The other options are incorrect because they describe other standards, such as 802.11r, 802.11v, or 802.11ax.

NEW QUESTION # 50

You are setting up a customer's 15 headless IoT devices that do not support 802.1X. What should you use?

- A. Clearpass with WPA3-AES
- B. Multiple Pre-Shared Keys (MPSK) with WPA3-AES
- C. Clearpass with WPA3-PSK
- D. **Multiple Pre-Shared Keys (MPSK) Local**

Answer: D

Explanation:

MPSK Local is a feature that can be used to set up 15 headless IoT devices that do not support 802.1X authentication. MPSK Local allows the switch to automatically generate and assign unique pre-shared keys for devices based on their MAC addresses, without requiring any configuration on the devices or an external authentication server. The other options are incorrect because they either require 802.1X authentication, which is not supported by the IoT devices, or WPA3 encryption, which is not supported by Aruba CX switches. NEW QUESTION # 51

You are configuring an SVI on an Aruba CX switch that needs to have the following characteristics:

- * VLANID = 25
- . IPv4 address 10.105.43.1 with mask 255.255.255.0
- * IPv6 address fd00:5708::f02d:4df6 with a 64 bit prefix length
- * member of VRF eng
- * VRF eng and VLAN 25 have not yet been created

Which command lists will satisfy the requirements with the least number of commands?

- A.
- B.
- C.
- D.

Answer: B

Explanation:

Explanation

The other options either use more commands or do not create the VRF or the VLAN.

Option C uses the following commands:

vrf eng: This command creates a VRF named eng and enters the VRF configuration mode1.

vlan 25: This command creates a VLAN with ID 25 and enters the VLAN configuration mode2.

interface vlan 25: This command creates an SVI on VLAN 25 and enters the interface configuration mode3.

ip address 10.105.43.1/24 ipv6 address fd00:5780::102d:4df6/64 vrf attach eng: This command assigns an IPv4 address of 10.105.43.1 with a subnet mask of 255.255.255.0 and an IPv6 address of fd00:5780::102d:4df6 with a prefix length of 64 to the SVI, and attaches it to the VRF eng.
