#### NEW QUESTION # 35

What does a single-threaded client application do when an API is consumed synchronously?

- A. It receives a slower response from the API service.
- B. It blocks processing until a response is received from the service.
- C. It continues processing without waiting for a response.
- D. It receives a quicker response from the API service.

**Answer: B**

Explanation:

In synchronous API consumption, a single-threaded client will wait (block) until the API responds before continuing with any other task. This ensures the client processes data only after a successful response, but it also means nothing else happens while waiting.
