Valid ISTQB ISTQB-Foundation Level Exam Test Dumps Free Pass for sure

P.S. Free 2026 ISQI CTFL-AcT dumps are available on Google Drive shared by Prep4pass: <https://drive.google.com/open?id=1a7NNNzhTabFF1DoHMn3vN0OBMLJFh0tG>

We have a group of experts dedicated to the CTFL-AcT exam questions for many years. And the questions and answers of our CTFL-AcT practice materials are closely related with the real exam. Besides, they constantly keep the updating of products to ensure the accuracy of questions. All CTFL-AcT Actual Exams are 100 percent assured. Besides, we price the CTFL-AcT actual exam with reasonable fee without charging anything expensive.

ISQI CTFL-AcT certification exam is ideal for professionals who work in software testing, quality assurance, or software development. ISTQB Foundation Level - Acceptance Testing certification exam is designed to help individuals gain a thorough understanding of acceptance testing principles and techniques. ISTQB Foundation Level - Acceptance Testing certification is an excellent way for individuals to demonstrate their proficiency in acceptance testing, and it is highly valued by employers worldwide.

Acceptance testing is a critical component of software development, as it helps ensure that the software meets the requirements of the stakeholders. The CTFL-AcT Certification Exam covers topics such as test planning, implementation, execution, and reporting. It also covers the different types of acceptance testing, such as user acceptance testing and operational acceptance testing.

## CTFL-AcT Interactive EBook, New CTFL-AcT Exam Practice

As mentioned earlier, Prep4pass solves all problems that you face while locating updated ISTQB Foundation Level - Acceptance Testing (CTFL-AcT) exam questions. We know that as an applicant for the test, you have excessive pressure to pass the ISQI Certification Exam. Prep4pass is here to help you earn the highly sought-after ISTQB Foundation Level - Acceptance Testing (CTFL-AcT) certification on the first attempt. Don't wait to get help from our ISQI CTFL-AcT real exam dumps to crack the test quickly. You can better comprehend Prep4pass's ISTQB Foundation Level - Acceptance Testing (CTFL-AcT) exam questions if you know about the three formats described here.

### ISQI ISTQB Foundation Level - Acceptance Testing Sample Questions (Q38-Q43):

#### NEW QUESTION # 38

Which one of the following statements describes correctly how acceptance testing may be augmented with other test techniques or approaches?

- A. In a priority-based testing approach, prioritization of acceptance tests depends on identified product risks.
- **B. In a model-based testing approach, acceptance tests are generated from graphical or textual models.**
- C. In a risk-based testing approach, acceptance criteria are derived from the tester's experience and intuition.
- D. In a black-box testing approach, acceptance test scenarios follow the implemented sequence of function calls in the code.

**Answer: B**

Explanation:

Model-Based Testing (MBT) is a test design technique in which test cases are derived from a model that describes some aspects of the system's behavior. In the context of acceptance testing, MBT can be used to generate high-level acceptance test cases automatically from business process models, use case diagrams, state models, or decision tables.

Option A is correct because MBT supports the systematic generation of acceptance test cases from these models, enabling better coverage of business rules and workflows while maintaining traceability to the requirements.

Other options:

B is close but slightly off: prioritization of acceptance tests in a priority-based approach depends on business value or stakeholder-defined priorities, not strictly on product risks.

C is incorrect. Risk-based testing relies on structured risk assessment, not just intuition or experience.

D is false. Black-box testing focuses on inputs and outputs without referencing the internal structure (such as function calls), which is characteristic of white-box testing.

Exact Reference - ISTQB CTFL Acceptance Testing Syllabus (Section 2.3):

"Model-based testing can be used to generate acceptance test cases systematically based on models representing business processes or system behavior."

#### NEW QUESTION # 39

Which one of the following statements about the relation between business goals, business needs and requirements is true?

- **A. Business goals, business needs and requirements describe, at different levels of abstraction, what shall be achieved**
- B. Once the business requirements are elicited, business analysts start to formalize business goals for the project.
- C. Business requirements are generally developed by refining product requirements.
- D. Business goals can be extracted from product requirements

**Answer: A**

Explanation:

The relationship between business goals, business needs, and requirements is hierarchical and reflects increasing levels of specificity:

Business Goals: High-level strategic objectives.

Business Needs: Problems or opportunities that must be addressed to achieve those goals.

Requirements: Specific capabilities or conditions the system must satisfy to meet the needs.

Option B is correct because it accurately describes how these elements relate at different abstraction levels in the requirements hierarchy. This relationship is fundamental to business analysis and accepted by standards like BABOK and ISTQB.

Other options:

A is reversed - business goals usually precede and drive the elicitation of requirements.

C and D misrepresent the sequence - product requirements are derived from business goals and needs, not the other way around.

B). Business goals, business needs and requirements describe, at different levels of abstraction, what shall be achieved

#### NEW QUESTION # 40

Given the following attributes:

- i. commercializability
- ii. functional suitability
- iii. viability
- iv. reliability
- v. security
- vi. cognitive ability
- vii. maintainability

Which one of the following answers contains quality attributes that are MOST relevant for acceptance testing?

- A. i, ii and vi
- B. ii, v and vi
- C. ii, v and vii
- D. iii, iv and v

**Answer: C**

Explanation:

Acceptance testing primarily focuses on verifying whether a system meets agreed-upon requirements and satisfies the business and user needs. Quality attributes (also known as non-functional requirements) play a vital role in defining the completeness of the acceptance testing process.

Let's analyze the options:

ii. Functional suitability - directly relates to whether the system provides the correct functions as per business needs. Essential in acceptance testing.

v. Security - ensures that the system is protected against unauthorized access or data breaches. Often critical for business stakeholders.

vii. Maintainability - reflects how easily the system can be modified. Relevant in acceptance if maintainability requirements are part of contractual criteria.

Thus, Option B (ii, v, vii) contains three attributes that are very relevant for acceptance testing.

Other options:

A includes vi (cognitive ability), which is not a standard ISO 25010 quality attribute.

C includes i (commercializability) - not a system quality attribute defined in ISO 25010.

D includes iii (viability) - more of a business or market consideration, not system testability.

B). ii, v and vii

#### NEW QUESTION # 41

Which one of the following answers lists characteristic of quality in use according to the quality in use model defined in ISO 25010?

- A. Security
- B. Freedom of interference
- C. User experience
- D. Satisfaction

**Answer: D**

Explanation:

According to ISO/IEC 25010:2011, the "Quality in Use" model includes characteristics that measure the system's impact on stakeholders during actual usage in a specific context.

The four main characteristics of Quality in Use are:

Effectiveness

Efficiency

Satisfaction

Freedom from Risk

Option C is correct because "Satisfaction" is one of the core quality-in-use characteristics and refers to the degree to which user needs are fulfilled in context.

Other options:

D (Freedom of interference) is not a defined term in ISO 25010; it may be a misstatement of "freedom from risk."

You are leading a brand new project team whose members are coming from all over the organization and have no former experience in working together. You need to build a common vision and team spirit. What workshop would fit BEST:

- A. You invite the team members and ask them to design their own (team-wise) emblem representing their values, beliefs, goals, tasks together than a common motto.
- B. You draw a staircase with 11 steps, each of them representing a major milestone of the project. The bottom of the stairs corresponds to the first day of the project and the upper step means that the project is released. You locate the present situation in the top of the stairs. The team is asked to identify and discuss the major steps downwards.
- C. You ask every member in turn to write down three things he/she likes and dislikes in the organization and to post them on a wall. A volunteer is then chosen to read randomly some posts that are then discussed with the group.
- D. You invite every member in turn to describe his/her past experience and his/her major achievements in the organization or in their former job.

**Answer: A**

• • • • •

We also fully consider the characteristics of the user on studying the CTFL-AcT exam questions. For example, many people who choose to obtain a CTFL-AcT certificate don't have a lot of time to prepare for the exam. Based on this point, our team of experts really took a lot of thought in the layout of the content. The contents of CTFL-AcT Exam Materials are carefully selected by experts. We hope you can get the most effective knowledge in the shortest possible time.
