

Real Exam Experience with the Microsoft GH-900 Practice Test

P.S. Free 2026 Microsoft GH-900 dumps are available on Google Drive shared by Real4Prep: https://drive.google.com/open?id=183gpOd-lniAjEg_a7JeaUgW4Qs2ppsn8

Customers of Real4Prep will also receive updates for 1 year after purchase. A lot of students have prepared from the for the GitHub Foundations (GH-900) certification test and passed it in a single try. They have rated the GitHub Foundations (GH-900) as one of the best in the market to prepare for the GH-900 exam it in minimum time. Try a free demo now and start your journey towards your dream certification!

Microsoft GH-900 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Working with GitHub Repositories: This domain targets Repository Administrators and Content Managers, focusing on managing repository settings and permissions. Candidates learn to configure repositories, use templates, and effectively manage files by adding, editing, and deleting. The domain also addresses versioning of files and the use of GitHub Desktop for streamlined file management tasks within repositories.

Topic 2	<ul style="list-style-type: none"> Collaboration Features: This section measures skills of Software Engineers and Team Leads and covers collaborative workflows using GitHub. It includes forking repositories, creating and managing pull requests, reviewing and merging code changes, and using GitHub Actions to support CI CD pipelines. Candidates also explore project management features such as creating and managing issues, using labels, milestones, and project boards, and tracking progress through GitHub Projects.
Topic 3	<ul style="list-style-type: none"> Introduction to Git and GitHub: This section of the exam measures skills of Junior Developers and Platform Support Specialists and covers the basic understanding of Git and GitHub. It explains what Git is and why it is used, the fundamental Git workflow, and concepts related to repositories including their local and remote distinctions. Candidates learn essential Git commands such as initializing and cloning repositories, adding and committing changes, pushing and pulling updates, and branching and merging. It also covers navigating GitHub by creating accounts, managing repositories, understanding its interface, and working with issues and pull requests.
Topic 4	<ul style="list-style-type: none"> Modern Development: This domain assesses abilities of DevOps Engineers and Continuous Integration Specialists in implementing modern development practices. It emphasizes understanding DevOps principles and leveraging GitHub Actions for automation and CI CD pipeline implementation. Candidates also learn GitHub's tools and best practices for conducting and managing code reviews.
Topic 5	<ul style="list-style-type: none"> Benefits of the GitHub Community: This section targets Community Managers and Open Source Contributors, focusing on engaging with the GitHub community. Candidates learn to participate in open source projects, utilize GitHub Discussions for collaboration and support, and contribute meaningfully to community-driven projects.
Topic 6	<ul style="list-style-type: none"> Project Management: This section is designed for Project Coordinators and Product Managers and focuses on using GitHub Projects for project management. Candidates learn to create and manage GitHub Projects, utilize project boards for organizing tasks, and integrate project workflows with issues and pull requests to maintain project visibility and progress.

2026 Accurate GH-900 Latest Braindumps Pdf | 100% Free GH-900 Interactive Questions

Even you have no basic knowledge about the GH-900 study materials. You still can pass the exam with our help. The key point is that you are serious on our GH-900 exam questions and not just kidding. Our GH-900 practice engine can offer you the most professional guidance, which is helpful for your gaining the certificate. And our GH-900 learning guide contains the most useful content and keypoints which will come up in the real exam.

Microsoft GitHub Foundations Sample Questions (Q38-Q43):

NEW QUESTION # 38

As a GitHub user, where in the UI can you configure two-factor authentication (2FA) to further secure your account?

- A. Organization Settings -> Authentication Security -> 2FA
- B. Profile -> Account -> 2FA
- C. Settings -> Password and Authentication -> 2FA**
- D. Repository Settings -> Secrets and Variables -> 2FA

Answer: C

Explanation:

As a GitHub user, you can configure two-factor authentication (2FA) to secure your account by navigating to Settings -> Password and Authentication -> 2FA. This section in the GitHub user interface allows you to set up and manage your 2FA methods, which provide an additional layer of security beyond just your password.

NEW QUESTION # 39

Workflows can reference actions in:

(Each correct answer presents a complete solution. Choose three.)

- A. Any public repository.
- B. The same repository as your workflow file.
- C. An enterprise marketplace.
- D. A published Docker container image on Docker Hub.
- E. GitHub Packages.

Answer: A,B,D

Explanation:

In GitHub Actions workflows, actions can be referenced from various sources depending on the needs of the workflow.

Any Public Repository:

Option A is correct. Actions can be referenced from any public GitHub repository, allowing the reuse of shared actions across multiple projects.

The Same Repository as Your Workflow File:

Option B is correct. Actions stored in the same repository as the workflow file can be referenced directly, which is common for custom actions specific to that project.

A Published Docker Container Image on Docker Hub:

Option D is correct. Workflows can reference actions that are provided as Docker container images hosted on Docker Hub, allowing integration of complex tools and environments.

Incorrect Options:

Option C (GitHub Packages) is incorrect as it is more commonly used for storing and managing dependencies, not actions.

Option E is incorrect because GitHub Actions are not directly referenced from an enterprise marketplace but rather from public repositories or Docker images.

NEW QUESTION # 40

The difference between GitHub Desktop and [github.com](#) is that Desktop:

- A. Enables integration with office suite applications.
- B. Offers a graphical user interface.
- C. Is a self-hosted version of GitHub.
- D. Is a standalone software application.
- E. Is only available on Windows operating systems.

Answer: B

Explanation:

GitHub Desktop is a standalone application that provides a graphical user interface (GUI) for interacting with GitHub repositories, as opposed to the command-line or web-based interfaces available on [github.com](#).

Graphical User Interface:

Option D is correct because GitHub Desktop offers a GUI, making it easier for users to manage repositories, perform commits, and handle other Git-related tasks without needing to use the command line.

Incorrect Options:

Option A is partially correct in that GitHub Desktop is a standalone application, but the key difference is the GUI.

Option B is incorrect because GitHub Desktop does not specifically enable integration with office suite applications.

Option C is incorrect because GitHub Desktop is available on both Windows and macOS.

Option E is incorrect because GitHub Desktop is not a self-hosted version of GitHub; it is a client application for accessing GitHub repositories.

NEW QUESTION # 41

What is the primary purpose of creating a new branch in the GitHub flow?

- A. To experiment with new features or fixes
- B. To capture information about an issue
- C. To create a backup of the main branch
- D. To incorporate changes from a review

Answer: A

Explanation:

In GitHub Flow, creating a new branch is a key step in the development process that allows for isolated development of new features or fixes without affecting the main codebase.

Experimenting with New Features or Fixes:

Option C is correct. The primary purpose of creating a new branch in the GitHub flow is to provide a safe space to experiment with new features or fixes. This allows developers to work on changes independently and only merge them into the main branch after they have been reviewed and approved.

Incorrect Options:

Option A (To create a backup of the main branch) is incorrect because branches are not typically used for backups; they are for active development.

Option B (To capture information about an issue) is incorrect because issues are tracked separately; branches are for code changes.

Option D (To incorporate changes from a review) is incorrect because incorporating changes is done during the pull request process, not when creating a branch.

NEW QUESTION # 42

What features are offered by Copilot for Business that are not offered by Copilot for individuals?

(Each answer presents a complete solution. Choose three.)

- A. Plugs directly into the editor
- B. Organization-wide policy management
- C. Offers multi-line function suggestions
- D. Blocks suggestions matching public code
- E. VPN proxy support via self-signed certificates
- F. Support for organization or enterprise GitHub accounts

Answer: B,D,F

Explanation:

GitHub Copilot for Business offers several features that are tailored to the needs of organizations, providing more control, security, and support compared to the individual version.

Organization-wide Policy Management:

Option B is correct because Copilot for Business allows organizations to manage policies across their entire user base, providing control over how Copilot is used within the organization.

Blocking Suggestions Matching Public Code:

Option C is correct because Copilot for Business includes enhanced security features, such as blocking code suggestions that match public code to prevent inadvertent use of unlicensed code.

Support for Organization or Enterprise GitHub Accounts:

Option E is correct because Copilot for Business supports integration with GitHub Enterprise accounts, offering additional administrative controls and integration capabilities.

Incorrect Options:

Option A (multi-line function suggestions) is a feature available in both individual and business versions, so it does not differentiate the business offering.

Option D (VPN proxy support via self-signed certificates) is not a primary differentiator of Copilot for Business.

Option F (plugs directly into the editor) is true for both individual and business versions, so it is not unique to Copilot for Business.

NEW QUESTION # 43

.....

One of the biggest highlights of the GitHub Foundations prep torrent is the availability of three versions: PDF, app/online, and software/pc, each with its own advantages: The PDF version of GH-900 Exam Torrent has a free demo available for download. You can print exam materials out and read it just like you read a paper. The online version of GH-900 test guide is based on web browser usage design and can be used by any browser device. At the same time, the first time it is opened on the Internet, it can be used offline next time. You can practice anytime, anywhere. The GitHub Foundations software supports the MS operating system and can simulate the real test environment. The contents of the three versions are the same.
