NCP-US Valid Torrent & NCP-US New Dumps Book

If you have tried on our NCP-US exam questions, you may find that our NCP-US study materials occupy little running memory. So it will never appear flash back. If you want to try our NCP-US learning prep, just come to free download the demos which contain the different three versions of the NCP-US training guide. And you will find every version is charming. Follow your heart and choose what you like best on our website.

Nutanix NCP-US (Nutanix Certified Professional - Unified Storage) certification exam is designed for IT professionals who are looking to validate their knowledge and skills in deploying, administering, and managing Nutanix storage solutions. NCP-US exam is based on Nutanix AOS (Acropolis Operating System) version 6.x and covers topics such as storage administration, data protection, disaster recovery, and troubleshooting.

Nutanix Certified Professional – Unified Storage (NCP-US) v6 exam is a certification exam that is designed for professionals who are seeking to demonstrate their knowledge and skills in managing and administering Nutanix unified storage. NCP-US Exam is intended to assess the candidate's understanding of the Nutanix storage architecture, configuration, and management.

Nutanix Certified Professional - Unified Storage v6.5 Sample Questions (Q35-

Q40):

NEW QUESTION # 35
An administrator is determining the most recent operation a user performed on the share cifs1 within the last 24 hours.
How should the administrator complete this task in File Analytics?

- A. In the Audit Trails section, search for the user and view their last operations.
- B. In the Anomalies section view the anomaly rule created for the user with an interval of 24 hours.
- C. In the Audit Trails section, search for the cifs1 share and view the actions on the share over the past 24-hour range.
- D. In the Anomalis section. select Users exceed an operation count threshold an input the 24 hour range for share cifs1.

Answer: C

Explanation:
File Analytics is a tool used for monitoring and auditing file activity within an organization's file servers. The administrator needs to determine the most recent operation a user performed on the share cifs1 within the last 24 hours. To accomplish this task in File Analytics, the administrator should go to the Audit Trails section, where they can search for the cifs1 share and view the actions on the share over the past 24-hour range. This will allow the administrator to see all the activity that has occurred on the share, including the most recent operation performed by the user.
According to the Nutanix Unified Storage v6 documents at nutanix.com1, File Analytics captures all file activity for registered file server instances and provides an audit trail for administrators2. In the Audit Trails section, you can search for the user or the share name and view their operations over a specified time range2. This would allow you to determine the most recent operation a user performed on the share cifs1 within the last 24 hours.

NEW QUESTION # 36
An administrator has been asked to implement a solution that allows users to:
* Recover single files
* Retrieve shares
* Set snapshot frequency
Which feature should be used?

- A. Smart DR
- B. Protection Domain
- C. Access Based Enumeration
- D. Self-Service Restore

Answer: D

NEW QUESTION # 37
What is the maximum number of snapshots that can be configured for a Nutanix Files snapshot schedule?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: D

NEW QUESTION # 38
An administrator has received multiple trouble tickets from users who are unable to access a particular Distributed share.
While troubleshooting, the administrator observes that data located on FSVM 3 can be accessed, but the data located on FSVMs 1 and 2 is inaccessible. The administrator receives this message when attempting to access data on FSVMs 1 and 2:
Network object not found
Both FSVM 1 and 2 nodes successfully reply to pings, and the administrator is able to access data via the node IP.
What must the administrator check as a next step?

- A. Check if keberos_time_skew is logged on the client.

- B. Check if user permissions are configured correctly.
- C. Check if SM3v1 is enabled on FSVM node 1 and 2.
- D. Check if all DNS records are created on the DNS server.

Answer: D

Explanation:
According to Nutanix Support & Insights1, a distributed share is a type of SMB share that distributes the hosting of top-level directories across FSVMs. To access a distributed share, you need to use a DNS name that resolves to all FSVMs in the cluster. If some DNS records are missing or incorrect, then some FSVMs may not be reachable by their DNS name, resulting in the network object not found error. This could explain why data located on FSVM 3 can be accessed, but data located on FSVMs 1 and 2 is inaccessible.

NEW QUESTION # 39
Refer to the exhibit.
What does the "X" represent on the icon?

- A. Corrupt ISO
- B. Share Disconnected File
- C. Tiered File
- D. Distributed shared file

Answer: D
