So our MS-700 learning guide is written to convey not only high quality of them, but in a friendly, helpfully, courteously to the points to secure more complete understanding for you. And the content of our MS-700 study questions is easy to understand.

Microsoft Managing Microsoft Teams Sample Questions (Q76-Q81):

NEW QUESTION # 76

You have a Microsoft 365 subscription that uses Microsoft Teams.

You plan to deploy a Microsoft Teams display device.

You need to enable automatic provisioning.

Which type of resource account should you create, and what should you use to identify the device? To answer, select the

appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

NEW QUESTION # 77

Your company has a Microsoft 365 subscription that uses Phone System.

Two employees have the user account shown in the following table.

The employees are leaving the company.

You need to ensure that the phone numbers can be reassigned to other employees as quickly as possible.

What should you use for each employee? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

NEW QUESTION # 78

You have a Microsoft 365 subscription that contains two users named User1 and User2. The users are provisioned for Microsoft Teams calling.

User1 is on leave for two weeks.

You need to ensure that User2 is notified of all calls to User1 while User1 is away.

Which two actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. From the Microsoft Teams admin center, modify the settings of User2.
- B. From Voice, add User1 to group call pickup.
- C. From the Microsoft Teams admin center, modify the settings of User1.
- D. From Voice, add User2 to group call pickup.
- E. From Policies, modify the voice routing policy.

Answer: C,D

NEW QUESTION # 79

You have a Microsoft 365 subscription that uses Microsoft Teams.

You need to identify which teams were inactive during the past 90 days.

What should you use?

- A. Teams advisor
- B. the Teams usage report
- C. the Teams user activity report
- D. the Office 365 Groups activity report

Answer: B

Explanation:

According to the Microsoft documentation¹, you can use the Teams usage report in the Microsoft Teams admin center to get an overview of the usage activity in Teams. This includes the number of active users, channels, guests, and post messages via chat and

conversations to know how many users in each team are actively using Teams to communicate and collaborate. However, this report only shows the last 7 or 28 days of activity of teams, which may not be enough to identify inactive teams over a longer period. Alternatively, you can use PowerShell scripts to generate activity reports that check the audit records of inactive teams and provide an HTML report file based on SharePoint site activity in the group's document library in the past 90 days and conversations that occurred in the mailbox in the past year². However, this method requires writing complex and time-consuming PowerShell commands, which may not be feasible for administrators who need to produce multiple reports on a daily basis. Another method to detect inactive teams in your Teams environment is by setting an expiration policy for the associated group in Azure AD. This notifies the owner of the team or group by sending an email to renew or delete the team after specified days if no activity is detected³. However, this method also has some drawbacks, such as:

- The owner may fail to notice the email or renew the team within the timeline of the configured policy, resulting in the team being deleted automatically and not being restorable after 30 days.
- The expiration policy applies to all Microsoft 365 groups in an Azure AD organization, not just Teams.
- This may affect other groups that are not related to Teams.
- The expiration policy requires Azure AD Premium licenses for the members of all groups to which the policy is applied.

Therefore, based on this information, the correct answer is D. the Teams usage report. This report is the most straightforward and accessible way to find inactive teams in Microsoft Teams, even though it has some limitations. The other options are either not related to finding inactive teams (Teams advisor) or require additional licenses or permissions (the Office 365 Groups activity report and the Teams user activity report).

NEW QUESTION # 80

Your company has a Microsoft 365 subscription that uses Microsoft Teams.

The company has a team named Customer Support.

Guest users from outside the company regularly access the Customer Support team.

You need to configure the Guest access settings to meet the following requirements:

Guest users must be able to view only a single application during screen sharing sessions.

Guest users must be prevented from creating channels in Customer Support.

Guest users must be admitted to meetings manually.

Which settings should you configure for each requirement? To answer, drag the appropriate settings to the correct requirements.

Each setting may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.
