As well as you memorize these questions and answers in our dumps, you must pass Salesforce Identity-and-Access-Management-Architect certification.

Salesforce Certified Identity and Access Management Architect Sample Questions (Q207-Q212):

NEW QUESTION # 207

A technology enterprise is planning to implement single sign-on login for users. When users log in to the Salesforce User object custom field, data should be populated for new and existing users.

Which two steps should an identity architect recommend?

Choose 2 answers

- **A. Create and update methods.**
- B. Implement SessionManagement Class.
- **C. Implement Auth.SamlJitHandler Interface.**
- D. Implement RegistrationHandler Interface.

Answer: A,C

Explanation:

Explanation

To populate data for new and existing users in the Salesforce User object custom field when they log in using SSO, the identity architect should implement the Auth.SamlJitHandler interface and create and update methods. The Auth.SamlJitHandler interface is an interface that defines how to handle SAML assertions for Just-in-Time (JIT) provisioning. JIT provisioning is a feature that allows Salesforce to create or update user records on the fly when users log in through an external identity provider. The create and update methods are methods in the Auth.SamlJitHandler interface that define how to create or update users in Salesforce based on the information from the SAML assertion. References: Auth.SamlJitHandler Interface, Just-in-Time Provisioning for SAML and OpenID Connect

NEW QUESTION # 208

Universal Containers (UC) has implemented SAML-based Single Sign-On to provide seamless access to its Salesforce Orgs, financial system, and CPQ system. Below is the SSO implementation landscape.

What role combination is represented by the systems in this scenario"

- **A. Salesforce Org1 and Salesforce Org2 are the only Service Providers.**
- B. Salesforce Org1 and PingFederate are acting as Identity Providers.
- C. Salesforce Org1 and Salesforce Org2 are acting as Identity Providers.
- D. Financial System and CPQ System are the only Service Providers.

Answer: A

Explanation:

Explanation

In a SAML-based SSO scenario, the identity provider (IdP) is the system that performs authentication and passes the user's identity

and authorization level to the service provider (SP), which trusts the IdP and authorizes the user to access the requested resource¹. In this case, PingFederate is the IdP that authenticates users for UC and sends SAML assertions to the SPs. The SPs are the systems that rely on PingFederate for authentication and provide access to their services based on the SAML assertions. The SPs in this scenario are Salesforce Org1, Salesforce Org2, Financial System, and CPQ System². Therefore, the correct answer is B. References:

SAML-based single sign-on: Configuration and Limitations

NEW QUESTION # 209

Universal Containers is creating a web application that will be secured by Salesforce Identity using the OAuth 2.0 Web Server Flow (uses the OAuth 2.0 authorization code grant type).

Which three OAuth concepts apply to this flow?

Choose 3 answers

- A. Access Token
- B. Scopes
- C. Client Secret
- D. Verification URL

Answer: A,B,C

Explanation:

The OAuth 2.0 Web Server Flow requires the client secret to authenticate the web application to Salesforce.

The access token is used to access the Salesforce resources on behalf of the user. The scopes define the permissions and access levels for the web application. References: OAuth 2.0 Web Server Authentication Flow, Digging Deeper into OAuth 2.0 on Force.com

NEW QUESTION # 210

Which three different attributes can be used to identify the user in a SAML assertion when Salesforce is acting as a Service Provider? Choose 3 answers

- A. Salesforce Username
- B. Salesforce User ID
- C. User Full Name
- D. Federation ID
- E. User Email Address

Answer: C,D,E

NEW QUESTION # 211

Universal Containers (UC) is considering a Customer 360 initiative to gain a single source of the truth for its customer data across disparate systems and services. UC wants to understand the primary benefits of Customer 360 Identity and how it contributes to a successful Customer 360 Truth project.

What are two key benefits of Customer 360 Identity as it relates to Customer 360?

Choose 2 answers

- A. Customer 360 Identity not only provides a unified sign up and sign in experience, but also tracks anonymous user activity prior to signing up so organizations can understand user activity before and after the users identify themselves.
- B. Customer 360 Identity enables an organization to build a single login for each of its customers, giving the organization an understanding of the user's login activity across all its digital properties and applications.
- C. Customer 360 Identity automatically integrates with Customer 360 Data Manager and Customer 360 Audiences to seamlessly populate all user data.
- D. Customer 360 Identity supports multiple brands so you can deliver centralized identity services and correlation of user activity, even if it spans multiple corporate brands and user experiences.

Answer: B,D
